Thread: Account Hitman[BETA] v0.5: Bruteforce Like A PRO!

imadthemad - *February 3, 2011, 10:17 am*

Description:
This is an all in one bruteforcer made by me with VB2008.
It can be used as a simple cracking tool if you're a basic cracker, or a powerful cracking tool if you learn how to use it.
Version 0.5 BETA --> because some things are not complete yet.

Screenshot:
[IMG]http://img836.imageshack.us/img836/9831/image1ni.png[/IMG]

Features:
Code -Up to 3 connections per attempt: Pre-Login, Login, Checking
-Variable data table to obtain account info on successful hits.
-Variable data table enables capturing and using essential variables in login headers.
-Advanced result reporting and result saving.
-Profile importing support for:
*Apex login configs and full configs
*Villain profile and checker files
*Freeze Mastercracker profiles.
-Beginner mode for beginners to get used to the program.
-FAQ to help users learn how to make profiles.
*A special "What The Hell?" section that covers all the questions crackers might have about the program.
-Tooltips that can explain what everything's for.
-One personally written profile titled "# API" that works pretty well.
*It will demonstrate some useful techniques of how to use Account Hitman better than other crackers.

I know the FAQ might be abit lengthy for some of you to read, but PLEASE READ THE "WHAT THE HELL" SECTION. It explains alot, and it's short.
Coming Soon:
Code -more profiles (that are written by me, not just imported)
-video tutorials
-Profile wizard (to make things look easier)
-Tester, Form Analyzer, and Web Analyzer
-Importing profiles from iTest and fastOCR
This program will have OCR capabilities in the future, but that version will be private (although that's what i thought about my kink.com bruteforcers and they ended up here anyway).

~Download Here: (~1.5mb)~

hxxp://cid-575037e3bc663ce0.office.live.com/self.aspx/My%20Appz%20%c2%a9%20ImadTheMAD/Account%20Hitman%20v0.5%20Beta%20[Official].rar

Please share any suggestions, bugs, or questions you might have about the program here.

If the program doesn't launch at first, you need to download .Net Framework 3.5:
http://download.microsoft.com/download/c/b/e/cbe1c611-7f2f-4bcf-921d-2df718591e1e/NETCFSetupv35.msi

Thanks in advance for your support and REP,
I hope you enjoy this tool xD

orsobianco - *February 3, 2011, 10:51 am*
thanks man great job hope it works

-mothered- - *February 3, 2011, 11:08 am*
Please provide an online scan report of the executable. This will assist In verifying the file's contents.
Here's the link: http://vscan.novirusthanks.org/

Thanks.

btw i'm a good programmer, but i dont have enough experience to make a program with virus undetectable by all the anti-viruses except for AntiVii
also some feedback and reputation is appreciated..

Can you please post a virus total and anibus scan?
?

=-CyBeR-= - *February 3, 2011, 12:22 pm*
VirusTotal Scan Report!
Anubis Scan Report!

imadthemad - *February 3, 2011, 1:15 pm*
that second one needs the .net 3.5 framework to run

bredsticks - *February 3, 2011, 2:54 pm*
people won't trust you with 5 posts and a virus scan showing one virus. just sayin do a scan or you won't get any feedback

imadthemad - *February 4, 2011, 1:15 am*
i already did a scan lol
fireblade helped out and did 2 as well

B_Amy - *February 4, 2011, 3:11 am*
If some things are not complete yet why in the hell release it ? I think people want FULLY functional programs not something thats been half way works ?

Codevade - *February 4, 2011, 3:13 am*
you have only 6 posts. of course people will be skeptical.

imadthemad - *February 4, 2011, 3:47 am*
i have only 6 posts because crackingforum.com is usually my active forum but since its down i figured i might as well start sharing the program in other sources

The purpose is to get feedback from users to make the program better and to find and eliminate bugs if there are any

It is a beta version. (All programs that are beta are incomplete. are you suggesting people never post beta programs?)
This is functional and working but the stuff that are "Coming Soon" are the things that are incomplete. All the things i wrote in "Features" are complete.

In my first beta (v0.1) people found the program too dificult but now i am hoping with beginner mode things are more understandable.
I need some feedback on that...

imadthemad - *February 5, 2011, 10:53 am*
BUMP ..
I put the virus scans on main post!

kitkin15 - *February 5, 2011, 1:36 pm*

Its Beta, which normally means that its not 100% complete or working, we get many Beta programs a day, i check almost all of them out, why come here and bother him? He made a program, released it, now hes waiting for feedback and he will most likely make the program better. This is the way things go, get used to it or get out =)

This looks pretty good, too bad i dont brute force lol.
I hope this is clean though, we dont trust people with low posts here because most the time their spammers or assholes trying to infect us with their bots. So dont take it offensively =)

-Kitkin15

imadthemad - *February 5, 2011, 3:32 pm*
understood. sucks that that dude found a risk in his scan. i mean wtf how lol the other 3 scans are clean

anyway, you already have tools of mine on this site ^^
kink bruteforcer and monster bruteforcer kink.com
i'm sorry i'm not a regular poster even on the websites where i am active i don't post so much

but i promise my programs are clean guess you just have to take my word for it :)

Nightaveng - *February 5, 2011, 4:14 pm*
o ill take a look at this it looks nice

B_Amy - *February 6, 2011, 1:39 am*
it looks nice, but to me Beta means it is fully functional, but needs to be tested for errors , if some things do not work, it is not beta.

2311 - *February 6, 2011, 3:25 am*
(Feb 6, 2011 02:39 AM)B_Amy Wrote: [CITE] it looks nice, but to me Beta means it is fully functional, but needs to be tested for errors , if some things do not work, it is not beta.
A beta version is released to get a first feedback and ofc it is allowed to contain bugs. That's the only reason for a beta: bugs. ???

imadthemad - *February 6, 2011, 4:39 am*
yeah i;ve found some bugs
like when apex config is imported it messes up some values (e.g. u will find many referer's set to uploaded.to when they shouldnt be)
was a small error in code i fixed it

any1 find any other bugs before next release?

so far no one has said anything meaningful :S
do i have to change something? are somet things unclear? are some things not working?

juupajoo - *February 6, 2011, 4:34 pm*
Hey, i'm not too experienced with tools like these, but i tried to get into my own facebook and youtube with this. Created a combo list with 24 combos but on the work tab i see it trying to connect but there's no progress. It just says "Combos: 0/24" and progress stays at 0%

G-Star Raw - *February 6, 2011, 5:28 pm*
Do brute forcers Evan work ? :/

imadthemad - *February 6, 2011, 9:04 pm*
do these things even work? oh geez lol
well, i tried :)
i miss crackingforum.com :(

juupajoo - *February 7, 2011, 6:16 am*
Any suggestions what might be my problem? I put a working combo in the combo list but it's not able to sign in... Is my combo list the one to blame? I put the combos this way: "username:password". Anyways, it would be nice to have an option to brute force a single account without lists or use a one big passlist.

.lost - *February 7, 2011, 8:07 am*
what is the use of that bro ,am a bigginer please help

imadthemad - *February 7, 2011, 9:15 am*
lol hackforums is really not for account crackers :P

anyway this version is discontinued. i made changes and am posting v0.6 on CF when it's back up again.

i will no longer respond on this thread

ThaGoon - *April 2, 2011, 6:39 pm*
if all you fuckin idiots didn infect each other you wouldn have to scan everything ..The download is clean but why imad posted it here i will never know he should of kept it on CF
