I agree with Hell Guardian, at least put a list of the sources that are in there. Cause for example It would suck if half the sources that are in there I already have. So that would be pretty helpful and I'm sure many people agree.

**hav0c1995** - *July 2, 2011, 7:13 am*
It's 200 mb man. I will download it later on. Can you give the list of the source codes in this RAR Archive? It would be greatly appreciated and put some password on it.

**Pitifoul** - *July 2, 2011, 8:05 am*

Ps : Only VB6 project :)

**The Penguin** - *July 2, 2011, 8:06 am*

Also people who hate vb6 its actually probably the easiest language for crypters as they are so easy to refud.

Thanks man! Works well for me, and don't let the haters tell you otherwise, I waited less than a second for the download to begin, and once it began, only took like 5 minutes to download, which wasn't bad at all for what it contained.
