Thread: Super, super basic batch help..?

Cathal - *September 28, 2012, 3:19 pm*

Can someone explain what I am doing wrong here..?

As soon as I run the program it opens and closes immediately :/

It worked fine until I added the "if exist" shit, so presumably the syntax in there is fucked. I've never really used the "if" statement, so please take it easy on me :)

Code @echo off

```
:CreateDataBase
   if exist "C:\Documents and Settings\Admin\database.txt"
   (
      goto Start
   )
   echo DATABASE SUCCESSFULLY CREATED >database.txt

:Start
   set /p account=Do you have an account?
      if %account%==yes goto Login
      if %account%==no goto Create

:Create
   cls
   set /p newusername=Please enter your new username:
   findstr /m "%newusername%" database.txt
   if %errorlevel%==0
   (
      goto NameInUse
   )
   goto NewPass

:NameInUse
   echo Error... Username is already taken! Please try again.
   pause>nul
   goto Create

:NewPass
   set /p newpass=Please choose a password:
   echo %newusername%--%newpass% >>database.txt
   echo Account Created! Please Login.
   pause>nul
   goto Login
```

I would make the first parenthesis AFTER the " with a space between it.

Code @echo off
:CreateDataBase
if exist "C:\Documents and Settings\Admin\database.txt" (
goto Start
)
echo DATABASE SUCCESSFULLY CREATED >database.txt
:Start
set /p account=Do you have an account?
