Thread: How to Set Up DarkComet RAT 3.2 with proXPN

F4T4L 3RR0R - *March 21, 2011, 11:58 pm*

Okay this is my first attempt at a HQ tutorial so please bare with me if I'm not perfect.

You need:
DarkComet RAT
proXPN http://proxpn.com/download.php
No-IP Updater Client http://www.no-ip.com/downloads.php

Step 1.

Download DarkComet RAT 3.2 (or latest version) from http://www.darkcomet-rat.com/

Step 2.

Place the file in its own folder on your desktop.

Step 3.

Download proXPN and make a free account. Install proXPN and enter your credentials in the window and click connect.
In a few seconds you will see an IP address as shown below. Write that down.

THEN YOU NEED TO GO TO NO-IP.COM AND MAKE AN ACCOUNT.
THEN CREATE A NEW HOST AND ENTER YOUR PROXPN ASSIGNED IP IN THE IP FIELD.

Then download the No-IP DUC (Updater client) and run it. Enter your username and password, select your host, and click refresh. You'll need to run this updater when running DarkComet and proXPN.

[IMG]http://i.min.us/kjJybo.jpg[/IMG]

Step 4.

Open up DarkComet by clicking client.exe.

Step 5.

Click Edit Server>Server Module

Step 6.

When you see this, have your settings as I have them, and click Generate a few times.

[IMG]http://i.min.us/kjIY1I.jpg[/IMG]

Step 7.

Click on Network Settings

Under IP/DNS, put the NO-IP ADRESS HERE
Under port, put a port of your choice. Any port except the basic 80, etc.

[IMG]http://i.min.us/klZ8H0.jpg[/IMG]

Then click Test Network. If all the results are green, you're good. :)

Step 8.

Then click Module Startup. In this section, you may choose what you want, but choose wisely.

Step 9.
Proceed to Module Shield. Again choose whatever server protection you want.

Step 10.

Don't use the keylogger, as you should wait until your slave is connected before activating it.

Step 11.
In the hosts file, you may add what you want, if you want to block people from virus scanners, block the web addresses but leave 127.0.0.1 where it is.

Step 12.
Choose Icon is pretty self explanatory. Choose an icon or leave the default.

Step 13.

I haven't used the plugins area as I don't have any plugins. So I can't explain this one.

Step 14.
File binder binds your server.exe to another file. (preferably another exe)

Step 15.
Build Module :)
Make sure output extension is .exe
Compress Executable should be disabled
CHECK save profile settings after build
BUILD SERVER

Save it where you would like, then close the Server Editor.

You are back at the DarkComet UI.

Step 16.
Click +Listen
Enter your selected port.
Uncheck Try to forward automatically (UPnP)

You're done!

Wait for your friend, or slave, or whatever to connect and you will see them pop up in the connections list.

Feel free to ask questions. Remember, I am not perfect, so I may not be able to answer everything and this is my first real tut.

Disclaimer:
This is written for educational purposes only. DarkComet was not made by me nor do I take any credit for making it. It is unlawful to infect a victim without their express permission. You have been warned.

That's all folks! Hope you enjoyed!

Failw0rm - *March 22, 2011, 12:37 am*
Good Job! Nice tutorial. One of the better written tuts. on HF

F4T4L 3RR0R - *March 22, 2011, 12:39 am*
Thanks I appreciate the feedback!

rock867 - *March 22, 2011, 6:27 am*
Darkcomet ports forwards automatically,,,

hav0c1995 - *March 22, 2011, 6:43 am*
You have written an awesome tutorial. It worked for me. Thanks in advance.

F4T4L 3RR0R - *March 22, 2011, 8:11 am*
No problem havoc. And rock that is only true if ou have UPnP on your router.
Did this help anybody? Is there anything I need to add?

I am open to feedback.

nicaa - *March 25, 2011, 1:53 am*
very nice tut u got there ! :D thumbs up! :D

CharleyisHere1 - *March 25, 2011, 2:41 am*
Need to check this out. :)

iamthefire - *March 28, 2011, 8:09 am*
it wont let me download darkcomet rat on the website
(Mar 22, 2011 08:11 AM)F4T4L 3RR0R Wrote: *[CITE]* No problem havoc. And rock that is only true if ou have UPnP on your router.

once i click it
I had that problem today, dont select the downloads tab you get it off main page
Nice tut by the way no portforward with proxypn then?

jeave - *March 28, 2011, 12:12 pm*
wasnt this already released?
use the search,i think there is already and TuT about this

uglykidjoes - *March 28, 2011, 1:35 pm*
damm for basic accont its limited to usa and im uk

F4T4L 3RR0R - *March 28, 2011, 6:16 pm*
No port forwarding is required. This will work with any VPN service.

yoibot - *March 28, 2011, 8:15 pm*
(Mar 28, 2011 08:22 AM)uglykidjoes Wrote: *[CITE]* I had that problem today, dont select the downloads tab you get it off main page
Nice tut by the way no portforward with proxypn then?
there is no link on the home page.

F4T4L 3RR0R - *March 28, 2011, 9:00 pm*
It really isn't that hard. Click on the download tab. Then click download. Then check the three boxes and hit download.

RAiiDHD - *March 29, 2011, 7:18 am*
Thanks alot, helped me get it working <3
toobad when you restart ur pc the thing changes the ip

halimaw15 - *March 29, 2011, 2:41 pm*
nice tut,,
but if the ip of proxpn changed it won't work..
sorry for bad english..

De-cryption - *March 29, 2011, 2:49 pm*
OMG THANK YOU i forgot that the no ip is for your ip not the pro xpn thanks alot

F4T4L 3RR0R - *March 29, 2011, 3:53 pm*
Yes it will work. That's why we use the noip updater in conjunction with proxpn.

F4T4L 3RR0R - *April 10, 2011, 9:31 pm*
Did this help anybody? Anybody at all?

9 Toes - *April 10, 2011, 10:33 pm*
I can't listen to any port.

And the IP Doesn't connect to the port? Whats going on

Tunasty - *April 10, 2011, 10:35 pm*
Not bad tutorial at all as it being your first one. :)

F4T4L 3RR0R - *April 10, 2011, 10:42 pm*
Well thank you Tunasty!

Squire, sometimes you need the ports open on the machine as well. Use Windows Firewall.

EDIT: This was my 666th post. Hmmm....

9 Toes - *April 10, 2011, 11:03 pm*
I still can't seem to get it to open. I port foward in the router but nothing is working.

F4T4L 3RR0R - *April 10, 2011, 11:04 pm*
Hmm. I will try to help tomorrow.

WinA - *April 11, 2011, 9:44 pm*
Doesnt work it says port opend but no slaves connect

F4T4L 3RR0R - *April 11, 2011, 9:51 pm*
When you hit Test Connection is everything green?

russeld - *April 24, 2011, 8:06 pm*
i was reading on port forwarding. Yes you need port forwarding if you are in a router (HOSTS)..

If a victim/client is in, say other location and in a router will the rat still work? of course you dont setup port forward in clients computer

Terence McKenna - *April 24, 2011, 9:19 pm*
But I dislike proXPN because it cuts bandwidth down to only 10,000 kbps.
Thats very slow when you have alot of slaves :-/

????? - *April 24, 2011, 9:44 pm*
Do note everyone that PROXPN DOES LOG! So your not fully secured if your looking to do something "illegal"

Mind freak - *April 24, 2011, 10:05 pm*
Man its Not Working For me Dnt Know Why or Also cybergate Spy-net all rat are not working for me with proxpn can u solve my problem by teamviewer ? Or Can u pm me ur id
Man One More Question How much time we connect proxpn,its change its ip different from previous one and we are putting the recent ip in Network Setting or if we reconnect proxpn then we should have to make another server with new ip and spread it ?

F4T4L 3RR0R - *April 25, 2011, 4:52 pm*
(Apr 24, 2011 08:06 PM)russeld Wrote: *[CITE]* i was reading on port forwarding. Yes you need port forwarding if you are in a router (HOSTS)..

If a slave/client is in, say other location and in a router will the rat still work? of course you dont setup port forward in clients computer
Are you on crack?

First, no you do need port forwarding with proXPN.

Second, what the hell does HOSTS have anything to do with any of this?

Yes it will.

Mind freak - *April 26, 2011, 4:36 am*
Fatal What About My Questions Man ?

mrray007 - *April 26, 2011, 5:00 am*
hmmm i will try this one..
i hope that many will help me here...
i'm just new in RAT.

F4T4L 3RR0R - *April 26, 2011, 7:25 am*
Mind freak, I apologize.

I can't help on teamviewer right now, and I cannot understand your second question.

Haxxorinator - *April 26, 2011, 10:56 am*
I did everything as instructed but I when I select listen to the port I get an error message that pops up saying only one instance can be run.

distortedx44 - *April 26, 2011, 11:33 am*
I still got no slave :(but they downloaded my server. I think the server's corrupted after getting crypted. :'(

Fredo In The Cut - *April 27, 2011, 1:19 pm*
So basically ProXpn can be used as portforwarding?

F4T4L 3RR0R - *April 28, 2011, 5:18 pm*
Haxxor, post a screenshot please.

Distorted, this is most likely the case, try it without a crypter.

Snap, yes, when using a VPN, the port you choose is not already open, but when it sees that something is trying to connect to the port, it opens.

jptdxh - *April 28, 2011, 5:34 pm*
Can this be work with Hotspot Shield?

daFF0d1L - *April 28, 2011, 6:20 pm*
instead of the noip can i use my static IP? and is it my public IP or my internal IP
instead of the noip can i use my static IP? and is it my public IP or my internal IP

F4T4L 3RR0R - *April 29, 2011, 6:59 pm*
Yes you can use your static IP, but I wouldn't.

Public IP.

daFF0d1L - *April 30, 2011, 5:47 am*
(Apr 29, 2011 06:59 PM)F4T4L 3RR0R Wrote: [CITE] Yes you can use your static IP, but I wouldn't.

(Apr 30, 2011 05:47 AM)daFF0d1L Wrote: *[CITE]* OK, thanks I just started using proXPN now it works! Before whenever I clicked test connection it couldn't connect to my no-ip or public IP. But now with proXPN in works fine. Thanks
No problem.

Probably a port forwarding problem.
(Apr 30, 2011 08:38 AM)s4adow89 Wrote: *[CITE]* why on me after restart pc i lose all connection port forward is ok but still... what i am doing rong?
http://img218.imageshack.us/i/pozawe.jpg/
Try changing the install path to App.

And change the installed module file attributes.

s4adow89 - *April 30, 2011, 11:25 am*
i had and port is ok still dosen`t work

F4T4L 3RR0R - *April 30, 2011, 11:30 am*
Are you saying that it still doesn't work when your victims restart their computers?

panama1 - *May 7, 2011, 5:20 pm*
great very well done i now understand darkcomet

F4T4L 3RR0R - *May 7, 2011, 5:38 pm*
(May 7, 2011 05:20 PM)panama1 Wrote: *[CITE]* great very well done i now understand darkcomet
Thank you. Glad it helped.

Feel free to ask if you have any questions.

Ortiz817 - *May 7, 2011, 6:52 pm*
when i send it via email to my other pc i click run as admin and when i go back to my laptop i dont see myself on darkcomet

F4T4L 3RR0R - *May 7, 2011, 7:10 pm*
(May 7, 2011 06:52 PM)Ortiz817 Wrote: *[CITE]* when i send it via email to my other pc i click run as admin and when i go back to my laptop i dont see myself on darkcomet
Some antiviruses will corrupt it, and if you crypted it, it may be corrupted, or you may have your settings incorrect.

Node - *May 16, 2011, 3:24 pm*
great tut..thanks for sharing

F4T4L 3RR0R - *May 16, 2011, 4:34 pm*
(May 16, 2011 03:24 PM)Cyberbear13 Wrote: *[CITE]* great tut..thanks for sharing
No problem mate. Thanks for thanking me.

totalNUB - *May 16, 2011, 4:54 pm*
Great tut thanks for explaining this. I decided to try out darkcomet instead of others and will definitely use this. Hopefully this RAT actually works for me!

Ayumu "Osaka" Kasuga - *May 18, 2011, 1:10 am*
Uh yeah I have a huge problem. I get everything working fine, but when you startup the computer the proxpn ip changes so you can no longer use it or any servers associated with it and you may lose many potential people. Any fixes?

F4T4L 3RR0R - *May 18, 2011, 1:49 pm*
(May 18, 2011 01:10 AM)jackbin Wrote: [CITE] Uh yeah I have a huge problem. I get everything working fine, but when you startup the computer the proxpn ip changes so you can no longer use it or any servers associated with it and you may lose many potential people. Any fixes?
Yes there is a fix. Follow the instructions.

They cover this.

st4yk3 - *May 18, 2011, 2:34 pm*
I made a tester.exe , and i dont pop up on the list when i start, yes the ports are open for upnp and everything , ive done this a while ago and it worked then 2

F4T4L 3RR0R - *May 18, 2011, 7:01 pm*
Don't test it on yourself it doesn't always work.

Percocet - *May 18, 2011, 8:33 pm*
Sweet, thx bro... now i just need a tester...

let me know if anyone wants to

If so I will help you get rid of it, step by step...

TrueSemperFi14 - *May 18, 2011, 8:51 pm*
I have been having this problem..I created my rat and everything and I wanted to test it on this junk pc on my network so I dragged my test server over to my flash drive. Then I put it in the other computer and tried to execute it and got an error that said something about the path and that I don't have the permissions to do it. This doesn't make sense cause the account is administrator and its xp..firewall disabled and avg is disabled.. Please help will be very much appreciated

TheKnownBuster - *May 18, 2011, 8:57 pm*
Can anyone please tell me how I can find out what ports are open and not busy(ready for use) on Linksys(Cisco) router. Please do not suggest me to try to open a port with a method. Linksys is retarded. Its firmware has been updated on 2008 last time. I want to use an open port for Darkcomet.
Thanks in advance

cbu21576 - *May 18, 2011, 10:51 pm*
great tut. only problem is here

Step 7.

Click on Network Settings

Under IP/DNS, input that IP from proXPN that WROTE DOWN.
Under port, put a port of your choice. Any port except the basic 80, etc.

that part should be

Step 7.

Click on Network Settings

Under IP/DNS, input that NO-IP ADRESS HERE
Under port, put a port of your choice. Any port except the basic 80, etc.

this way when pro xvn changes the ip on you it doesnt mess this up because the no ip duc will notice the change. if this was said sorry i didnt want to read 7 pages. good write up though!

Doctor Shadow - *May 18, 2011, 10:54 pm*
It didn't work, anyone mind helping me out? Also, can you use [censored]?

kaoticsolja - *May 18, 2011, 11:11 pm*
only one usage of each socket address is normally permitted, thats what i get when i click listen
ps i just wanna say that tut was flawless in my case, got me up and running in 3 minutes, not bad, now if i can just get a slave!

cbu21576 - *May 18, 2011, 11:39 pm*
(May 18, 2011 11:11 PM)kaoticsolja Wrote: [CITE] only one usage of each socket address is normally permitted, thats what i get when i click listen
ps i just wanna say that tut was flawless in my case, got me up and running in 3 minutes, not bad, now if i can just get a slave!
once you start the program it is already listening. If you want to restart the listening goto Sockets/Net at the bottom. This brings up 2 sections. the top one shows the socket handle and the port listening on. To restart right click it and hit close socket. once they are all closed you can start a new listen.

On a side note. anyone have a fud i can get? im broke so I cant afford to pay for one server lol

TheKnownBuster - *May 19, 2011, 12:25 am*
Hey dude you say make a free account on proxpn account but it's not free to make an proxpn account...
What about that?

cbu21576 - *May 19, 2011, 3:02 am*

I tested the tutorial from start to finish and impossible to bring up the client I am under his orange livebox can come from?

Dexter488 - *June 10, 2011, 5:20 am*
Good Job! Nice tutorial
I dont have this rat but seems promising

F4T4L 3RR0R - *June 10, 2011, 11:11 pm*
Thanks Dexter488.

@furi2007, you need a victim... Out of your network.

?Ñåzg?l - *June 10, 2011, 11:29 pm*
already knew how to do this but it will help many people out there, can you use anything else then proXPN I would prefer to use another program instead of one which keeps logs

lukessurfing - *June 11, 2011, 1:28 am*
Thankyou for the guide helped me out alot.

Second RAT set up.
XD

2pac-G - *June 14, 2011, 11:52 am*
damid cant do it ! when i put my no ip host and try to connect to 1604 (with proxpn on and no ip) only the LAN was sucessfull connected , neder localhost neder 127.0.0.1 couldnt connect. Has someone met this kind of thing?

F4T4L 3RR0R - *June 14, 2011, 11:54 am*
It was hard for me to understand your post. Mind reposting?

2pac-G - *June 14, 2011, 12:59 pm*
So i made all the steps good till Step 6 , suddently in step 7 when i put my No ip adress , and connect to 1604 port (not being used) i get this:
Localhost was NOT successfully connected to port: 1604
LAN (xx) was successfully connected to port: 1604
(myhostblabla.) was NOT successfully connected to port: 1604
And i was running ProXpn and no ip also o.0 so i dont understand how didnt the port got forwarded... ...

F4T4L 3RR0R - *June 15, 2011, 6:57 am*
Well first, humor me and use a different port.

Second, add inbound and outgoing exceptions for the port you choose in Windows Firewall, both TCP and UDP.

OreosS - *June 19, 2011, 7:20 pm*
I know that my slaves have opened this but it is not working. I followed all the steps and it doesnt work :s

Sneaky™ - *June 19, 2011, 9:05 pm*
This worked Great!!! lol but uhmm i accidently hid all of my stuff!!! how i get it all back?
How do I pass this on? I tried sending it to my laptop and whenver i click on it i just get errors, and on my main pc, my laptop doesnt appear

cougamvp - *June 20, 2011, 12:49 am*
great tut. any reason for disabling try to connect undp?

PyroJack - *June 20, 2011, 6:36 am*
Very Nice tutorial

Very cool

zurator - *June 20, 2011, 9:31 am*
What is the no-ip usefull for if you have static IP? (Yes i am a noob)

Sneaky™ - *June 20, 2011, 10:55 am*
Does anyone know how to send this around? like i sent it and when clicked nothing happened

F4T4L 3RR0R - *June 26, 2011, 5:53 pm*
(Jun 20, 2011 09:31 AM)zurator Wrote: [CITE] What is the no-ip usefull for if you have static IP? (Yes i am a noob)

Hide your IP.

Don't use your static ip.
(Jun 20, 2011 10:55 AM)harvilledu Wrote: [CITE] Does anyone know how to send this around? like i sent it and when clicked nothing happened
That's most likely a port forwarding/opening problem.

Never - *June 27, 2011, 1:37 am*
Thank you so much. I got everything up and running and already infected one person. thanks.

time spent:
about 50 mins to an hour.

F4T4L 3RR0R - *June 27, 2011, 10:54 am*
Nice work. Have fun with this.

Deaths Shepherd - *June 28, 2011, 10:25 pm*
Whenever I try to extract cliente.exe from WinRAR it tells me " This is no longer located in C:/Users/brett/AppDatta/local/temp/Rar$DR91.048/DarkCometRAT32FWB/DarkCometRAT32FWB. Verify the item's location and try again. (noob so i cant figure it out)

F4T4L 3RR0R - *June 28, 2011, 11:22 pm*
(Jun 28, 2011 10:25 PM)Deaths Shepherd Wrote: [CITE] Whenever I try to extract cliente.exe from WinRAR it tells me " This is no longer located in C:/Users/brett/AppDatta/local/temp/Rar$DR91.048/DarkCometRAT32FWB/DarkCometRAT32FWB. Download the new DarkComet. 3.3.

Deaths Shepherd - *June 28, 2011, 11:33 pm*
Thats the one I've been trying to get I tried 3.3 and 3.2.

F4T4L 3RR0R - *June 29, 2011, 1:28 am*
Download to desktop maybe.

Deaths Shepherd - *June 29, 2011, 11:04 am*
You mean when it's opened in the .RAR trying extract it to my desktop?

Do you mean to extract it from winRAR to desktop cause i already tried that.

F4T4L 3RR0R - *June 29, 2011, 4:56 pm*
No download to your desktop, and then try to extract to your desktop.

Deaths Shepherd - *June 29, 2011, 6:43 pm*
How do I get the option to do this I click it then it asks me what I want to open it with. Nothing else.

?implicity. - *June 29, 2011, 6:48 pm*
Nice tutorial, I am looking at Darkcommet as i read this. Thank for sharing this.

T~

No problem, glad you like it.

What browser are you using Shepherd?

Deaths Shepherd - *June 29, 2011, 6:59 pm*
Mozzila Firefox.
Now that I think about it IE couldn't even open the file from the website. Do you think the problem is the browser?

F4T4L 3RR0R - *June 29, 2011, 7:37 pm*
Go into options and have it either download to the desktop or ask before downloading.

Deaths Shepherd - *June 29, 2011, 7:50 pm*
Still didn't work. I think the problem is the folder, I deleted it but once I try to extract it again it just re-makes itself.

How the hell is this not at 600 replies!! I've been searching for about a week now on how to set up the VPN. Everyone has me going everywhich way and it got really annoying. I just finished the Tut ran it on my computer and it WORKED!!!! I was so happy xD. Thanks for the awesome Tut man!!!

F4T4L 3RR0R - *August 20, 2012, 7:34 pm*
Glad it helped. :)

This is quite old but I'm glad to know it still helps people.

On ProXPN my IP always switches and my No-IP won't work because it can't foward to my ip adress, as my IP is not the one I put in..

Help?

maymoon - *August 20, 2012, 11:51 pm*
Thanks for the guide bro, thums up! :))))

BladeZ201 - *August 21, 2012, 10:18 pm*
Darkcomet website had been shut right?

COOPA - *August 21, 2012, 10:48 pm*
Works for me :) Thanks for the guide

un4gettable - *August 22, 2012, 4:41 am*
does this work?
i tryed this once
but it didn't workis somebody using proxpn for ratting?

Sn0wy - *September 20, 2012, 1:45 pm*
Thanks for the great tut, even though it's old. Still works well

F4T4L 3RR0R - *September 20, 2012, 8:53 pm*
No problem! Glad you like it! Yes, it's highly-outdated. In fact, DarkComet doesn't even exist anymore. Lol.

Sexseth - *September 24, 2013, 7:08 pm*

Ok so i have everything setup and working fine, i can rat my self and my other computers and it pops up, i have the file Crypted with a Fud Crypter but when i send the file to my friend and they run it, it doesnt show up on my rat?

F4T4L 3RR0R - *December 19, 2013, 8:38 pm*

I am not providing support for this anymore. Please do not PM me about it.
