Thread: [My guide to easy spreading](#)

theboner - July 8, 2009, 10:10 am

Well as the title says I am going to explain a couple of easy ways to spread you keylogger/bot/ or anything along those lines

Step 1 would be to find a Great UD or FUD keylogger

UD stands Undected(only detected by a couple of av's) and FUD stands for fully undetected(no AV can detect it).

Now Of course I would recommend getting one of albertinos keyloggers there always user friendly and coded for this purpose.

Step 2

which would be to create a ftp server you can either do this by setting up a ftp server on your computer. You can do this by getting filezilla. My best recommendation would be drive.hq.com or if you have a file server do it on there. now with that completed on to step 3

Step 3

In the settings of the keylogger or whatever type in your ftp info. It will either be a ip or the link that is given at drive hq put that in for host.

User name and pass are the ones you have selected.

Step 4

Now you can test to see if your keylogger is correctly uploading to your ftp server. Ways to do this is to load the keylogger you have created on your computer and then see if the file gets uploaded to your ftp server. If it does then you have correctly set up your keylogger

Step 5

Create a random yahoo account the more girlish the better. While registering create everything in a girls name in further steps you will find out why.

Step 6

Go online and search for amateur girl pictures one full clothing then one full nude(or close to it)

Now on to step 7

rename the keylogger file to photo5621 or something with the words photo in it.

Step 8

Goto yahoo instant messenger and then yahoo chat when choosing a room chose something along the lines of romance or a teen chat.

Step 9

While in the chatroom post something like

18 or 21 female wanting to chat maybe trade pics

You will get the usual spam posts and then your target will be the males.

Step 10 this takes a couple of minuts but chat with him get them comfortable with you and ask didnt you want to see my pic. He will of course say yes

Step 11

Send him the keylogger file first Reason for this is because he will try to open it and then tell you that it wont open. After he says that then send him one of the pictures that you saved online. and chat with him for 2 or 3 more mins and tell him you have to go

Step 12 do it again and again

Finally wait for the logs to start coming in.

Hopefully everyone thought that this guide was easy to follow

Please let me know if theres anything that should be fixed.

If you find this to be too time consuming you could always make a torrent with a catchy title like 3dmarkvantage keygen or something that has the words keygen. Good reason for doing a torrent as it gives you a download count and everything like that.

But its more of a personal preference.

Please note if you liked this guide +rep is always nice but is not needed.

Tøxic GFX - July 8, 2009, 10:12 am

I'll have to do this when I get my albertino. I've been looking for good ways to spread

theboner - July 8, 2009, 11:33 am

It does take a little bit more effort but with this guide you target people ages 18-40 in the chatrooms instead of the 13-25 age group on torrents. So you will get more useable info from this method. That is why I recommend. Now if you want steam accounts and wows and shit like that go ahead and do the torrent method and stuff like that. But this is more of a targeted age group method.

Itachi Uchiha - December 3, 2009, 3:22 am

This is amazing this works perfectly thanks =D

Threadlocks - December 3, 2009, 3:28 am

do it with the magic speed ;-)

Iron m@n - June 30, 2011, 7:42 am

(: Nice man! keep it up! :)
