Thread: [MEGA] How to prevent yourself from getting DOX'ed, Simple steps that can make you completely anonymous online[MEGA-TUT]

Sweat Heart - *July 13, 2011, 12:42 pm*

This thread will be updated from time to time (if I find new ways to get traced)

Hello, well after releasing some basic things in my e-book I thought well let me write a little piece on it.

DISCLAIMER:
Because this knowledge can be used to protect yourself and to DOX others, I (Sweat Heart) do not take any responsibly for the info I provide. By using this tutorial and knowledge you have the ability to do illegal activities. May I remind you that SWAT'ing is highly illegal, and several arrest have been after calling in a SWAT. Don't use this the wrong way but secure yourself from getting SWAT'ed or DOX'ed.

If you don't know what DOXing is, please read this (Click to View)#What is DOXING?
-The question has been brought up several times by many different people. Everyone has their own opinion on what it is in my opinion it is someones life in a text document. From DOXING you learn to be the person you can kind of think of yourself as a spy there is nothing you can't learn or do from Doxing.If someone's DOX were to be "dropped" as some say before you know it people know your life. They know where you live, what your house looks like, your family, your friends. They learn your life and all it takes is the Internet from the internet you will learn everything about them. And to be honest it sucks, but DOXING is a powerful tool.

DOX looks like:
(1) Name

(2) Gender

(3) Birthday

(4) Age

(5) Website

(6) Email Id

(7) Social Networking Site Profiles -> Facebook/Yahoo/Orkut/Twitter/My space

(8) Location/Area/Country

(9) IP – Address

Credits to Cubical
Or read this to understand what DOXing is. By Cubical

Intro
What do you don't want to get found online? Your bank and your Facebook. So make sure you use other info for those two. Facebook and other sites have many privacy settings. Customize them to your stealth level :Dhttp://www.facebook.com/settings/?tab=privacy

https://hackforums.net/usercp.php?action=options (click on 'hide my email')

https://www.paypal.com/webapps/customerprofile/summary.view (change personal details)

http://twitter.com/settings/account ("Let other find my by my email")

Paypal tip suggest by Baker
Do not have your address or very personal Information on Ur Paypal . This is because it is a very sneaky but cunning way of getting information . To do this . Sign in on your Paypal and go to Request money . Then type in the email you want aand select 1$ and set money request to goods . Then when the request is sent the person can click on the request tab thing and can see such things as Address , name . Easy way of getting dox .

We will talk later in this tut about private information, thanks for adding baker

Usage of emails
The usage of e-mails, everyone has their official e-mail. Usually their full name, so make another account for all your other shit! It's not that hard, a gmail account is easy made!

email for hacking suggested by agentannon
Well, I asume this goes without saying, but use a different email for your Haxoring activities than your private life. I have my hacking email as the email of my alias so that if anyone finds it, it might send them in the wrong direction. I also hate signing into different email accounts so I never log into my hacking account, I just set up a filter (it's a Gmail) so that it forwards ALL my mail to my normal email account.

Ten minutes mail!
I like this one allot, I got it from a friend.http://10minutemail.com/10MinuteMail/index.html

You can use this Spoiler (Click to View) as a mail to register. Works really good!

Tracing IP's from Emails
Yes this is possible, when you send an email your IP will be send within. Let me show you;
Pics are a bit fucked up sorry

I will use this mail that is fake

The source

This doesn't work when send trough VPN/Proxy/VPS crap like that. This also can be send by a site, you can do a WHOIS on the IP or check if it's blacklisted by Google'ing the IP.

This message is send encrypted (base 64)
Just to show you how that looks:

Encoding this message (don't do anything this says)
If you encode this message on http://crypo.com/eng_base64c.php you get this http://pastebin.com/raw.php?i=5e9ZMYEi

This isn't very much related to DOX'ing (the encryption part) but it's just interesting :D

Posting real info
Never post your real info online! I haven't filled a register seriously since 2001 something. The simplest things might scare you. Example I needed to register for some booter, and it asked for my HF username. Then I figured once I connect to the site he has my IP and when I give him my HF username he can link the two. What gives him a massive database of HF IP adresses. Always think with caution.

Online Register
Online register. I suggest to take a BS name for only, I use the name John Travolta. Why? This name seems to be normal so auto-correction wont go crying and well yeah you can't get traced

Fake name generator suggested by 0dium
Make a full name with address and things on:

http://www.fakenamegenerator.com/

Pretty handy

Computer name and Meta Data
Your computer name! When you make an office file your name gets binded to that file. So when your computer name has your full name and you share a .DOC file everyone can simply check out your full name

SKYPE!
Using skype is the easiest way to get IP's. Be extremely cautions with that. I never give out Skype to people I don't know. I suggest using MSN or chat apps for chatting with unknown people.

Links given by other
IP trackers are good these days, someone says check this thread and uses a bitly to redirect to a fake page. And they have your IP.

[img=150x150]http://www.moviefilmreview.com/wp-content/uploads/2010/05/important.png[/img]

If you're afraid to open a link, use a proxy. I have set up a simple proxy PM me for it. It's fast and used by 5 people at the moment, or use my e-book to setup TOR browser or use Hotspot Shield VPN which I can recommend.

PHP image trackers
These are the hardest, there is a way to track IP's using a image. Just try to remember most uploading sites and maybe even ask if the person can upload the file to there

How to notice
Usually they are like this

Code www.domain.com/awesometits.jpg/
Noticed the / after the .jpg? That means it's a directory, not a picture.

When you connect to a site
Be aware that the site will store your IP, and is visible in a log view-able by the owner

When they got your IP
Don't worry he wont h4x0rrRz you, but he is in most cases able to find out where you live. (the town) When you are a SE legend you may find out the address but nothing more. Only when you have a computer from 1800 he's able to hack you trough IP. Just make sure to have proper AV's installed. (Not saying you can't get hacked trough IP, but it's extremely hard.)

I'm getting (D)DOS'ed, now what
When this is a DOS attack I suggest downloading WireShark and getting the IP of the person attacking you.
When this is a DDOS, and you're getting attacked regular. Call your ISP (Internet Service Provider) and tell them, they will change your IP.
(You can't know when you're getting attacked so running a live capture in WireShark never hurts :D)

If you have a dynamic IP
Unplug your router, wait some time and restart

Linking to accounts
When you have your mail on your youtube and you link someone your account they can see your email and they can try to trace that.

Tracing back using Facebook pictures (tutorial of Captain Awesome!, full credits to him!)
His tutorial (will look like this one ;) CLICK ME

NOTE: This happens when you upload this to a FTP or a website (I think Photobucket does it as well), because this will keep the file-name is it is. Let's say you have puppy.png it would be www.domain.com/puppy.png (if uploaded in root). If it's uploaded to let's say minus it will become minus.com/(random_numbers). In that case download the file and check the name using 'properties'

Example Image
[img]http://profile.ak.fbcdn.net/hprofile-ak-snc4/195292_10738811_1141178_n.jpg[/img]

Now as you can see the name of this picture is .profile.ak.fbcdn.net/hprofile-ak-snc4/195292_10738811_1141178_n.jpg

Now using the middle numbers 195292_10738811_1141178_n.jpg (this can change in length, this is the userID)

Now put that number after the 'id='

Code http://www.facebook.com/profile.php?id=

becomes
Code http://www.facebook.com/profile.php?id=10738811
Prevent this from happening
Simply change the file-name before uploading online.

OR, use another suggestion by Baker

If anyone seems to find your facebook a thing you can do to stop it is this .
Go to http://www.facebook.com/username/
Then you can type what ever you want and it will change ur URL .
So from like : http://www.facebook.com/profile.php?id=100153119193

To like : http://www.facebook.com/Bakeriscool

Great security tip . Then change ur profile pic and add a symbol in ur name so they dont find you again .

Trying out your own DOX
Check one of these sites:
www.pipl.com (recommended best one)

www.wink.com

www.123people.com

www.zabasearch.com

And these for your address (mostly US)
www.addresses.com

www.411locate.com

www.411.com

www.whitepages.com

Try out your full name, emails and game tags. Try finding info you don't want showing up!

Family on Facebook
When you link your account to someone that's your family think about the consequences that may have!

PHOTO INFO!
Important one! When you make a photo with your smartphone TURN OFF GPS! When you make a photo while having GPS on everyone is able to see the exact location of that photo. Example you upload a photo saying just chilling on FB and your girlfriends see that the picture is shot a girls house.

Photo tip by Crash-Override

Whenever you post a image in forum, just don't upload the real image. Its way safer to snapshot the real image using snipping tool and then uploading it to image-servers.

By doing this all image data's like geo tagging, etc can be hidden.

Uploading photo's on multiple places
Let's say I have a blog of my family, I upload photos of my girlfriend the dog and other things. And now I want to share a picture on HF.

What I always do is cover up the eyes of my GF, I don't need people fapping on my girl. But what you don't think of is that this picture can be search even when it's censored.

Example

You think it's all good you covered the eyes and. But now I do this

And what do I find?

All the places this picture is uploaded, without the censored things.
This does not work for Facebook, since the crawlers of the site can't acces

WHOIS Scan
For the site owners, be aware that a person always can do a WHOIS scan on your site.

WHOIS of Google (Example)

http://networktools.nl/whois/www.google.com

Code google.com

Registrar Name: Markmonitor.com
Registrar Whois: whois.markmonitor.com

Domain servers in listed order:

ns1.google.com
ns3.google.com
ns4.google.com
ns2.google.com

Your server.exe
Oke this one goes a little bit far, but you can infect a computer and see the connection of the .exe

This will be to the attackers IP, unless you use a VPN to connect.
Think of programs like, Spoiler (Click to View)
[img]http://www.bleepstatic.com/malware-removal/tools/conficker/downadup-scanning.jpg[/img]

Sending data
When you think you're fully anon (You're on a VPN without logs, and you bought the VPN with fake info etc. etc.) your ISP (Internet Service Provider) can always see what you're doing. unless you encrypt your data using a SSL connection to sites.

Don't think you can distribute CP (example of something highly illegal, don't freak out) because your IP can't be back traced.

Think!
Think smartly where to put what info, this can help you allot

A SWAT
This is only in US.

I'm not trying to scare people, but this is a video of a SWAT.
video (Click to View)

Do you have ways of getting traced and know how to solve them? Please post or PM them and I will put them in the thread. (With the full credits and your name)

Try to make yourself save online. It's simple.
Be safe on the internet, Sweat

DISCLAIMER:
Because this knowledge can be used to protect yourself and to DOX others, I (Sweat Heart) do not take any responsibly for the info I provide. By using this tutorial and knowledge you have the ability to do illegal activities. May I remind you that SWAT'ing is highly illegal, and several arrest have been after calling in a SWAT. Don't use this the wrong way but secure yourself from getting SWAT'ed or DOX'ed.

Please say thanks, so more people can enjoy this ;)

There are some tuts on it.

Z?us - *July 14, 2011, 12:01 am*
Quote:Only when you have a computer from 1800 he's able to hack you trough IP.
You failed miserably here, how do you think servers get hacked? Ever hear of open ports? Metasploit? Telnet? ???
(Jul 13, 2011 02:06 PM)chukko1 Wrote: [CITE] How can i find someones Ip trough skype?
Open CMD(Run As Admin), type: Netstat -bno find the established connection, or Wireshark it.

Sweat Heart - *July 14, 2011, 2:57 am*
(Jul 14, 2011 12:01 AM)Z?us Wrote: [CITE] You failed miserably here, how do you think servers get hacked? Ever hear of open ports? Metasploit? Telenet?
When you have proper anti virus installed your personal computer wont get hacked. Unless you have secret l33t haxXzors?4

telenet? you meant telnet?

shijil619 - *July 14, 2011, 10:02 am*
You could have made your font a little more bigger and colourful making it easy to read and look wonderful!!

Nway nice guide and a nice share!! Thanks!! =D

zero5 - *July 14, 2011, 11:00 am*
Great thread, thanks for sharing! :D

Inventor1 - *July 14, 2011, 11:08 am*

Yeah with all the things around xerotic people understand that they should watch out with private information.

I'm very glad you liked it, spend allot of time in remaking the thread and I'm still adding things to it ;)

'Major - *July 23, 2011, 7:37 pm*
Got round to watching that SWAT video. That was sickening.

Tbh if i got "SWAT'ed" I'd grab a gun and shoot the nearest cop in the face, whether I ended up with

a bullet in my head or not.

Well I'm from the UK so there are no guns/SWAT but still.

But great job with this.

Sweat Heart - *July 23, 2011, 8:17 pm*
Added data again, going to sleep now will be working on it again tomorrow. Tell me what you think.

Chad™ - *July 23, 2011, 8:37 pm*
Can't think of shit else you could've added to that.. Good job.

Sweat Heart - *July 24, 2011, 4:35 am*
Working on the thread lay out :D But can't think of things I can add.

Nuclear Squid - *July 24, 2011, 5:14 am*
thanks for the tutorial. Was really useful :D

djmayur - *July 27, 2011, 12:20 pm*
awesome tut sweat..read whole things...n bookmarked it...

YouGotPwned - *July 28, 2011, 12:25 pm*
Good tips in this thread read most of it but what caught my eye was this,

Quote:email for hacking suggested by agentannon
Well, I asume this goes without saying, but use a different email for your Haxoring activities than your private life. I have my hacking email as the email of my alias so that if anyone finds it, it might send them in the wrong direction. I also hate signing into different email accounts so I never log into my hacking account, I just set up a filter (it's a Gmail) so that it forwards ALL my mail to my normal email account.

This would most likely get you caught out, Lets say someone you dont want snooping around logs into your personal email they will see al the emails from your hacking email and you will be caught.

I think you should remove this part from the thread just my opinion, An alternative to this would be to have more than one browser as i do.

YouGotPwned

Killer12972 - *July 28, 2011, 4:37 pm*
Nice Tut. I thought me some usefull things.

This is from the perspective of not getting DOXed. Obviously this isn't the best move if you don't want to get caught by authorities

Updated with 10 minutes mail, good to be back after beeing limited for a week

sh000t - *July 31, 2011, 6:19 am*
Thx for the Tut.
Now i know who is ddosing me :)

Greetz,

wikidownload - *July 31, 2011, 7:59 am*
a big thanks.... this is the best .. enjoy the dox.... ^_^

Sweat Heart - *July 31, 2011, 8:22 am*

i already knew about that shit monkey now fuck off and don't copy my threads

Mello - *August 3, 2011, 7:46 pm*
^ lol calm down

Its a pretty good tutorial, also, i often tell ppl to use different emails, logins and PWs for each website but most people are too lazy . Actually its their laziness that makes them so easy to track down. I dox myself from time to time with most common methods (using the info that can be found online) and i guess im safe

Sweat Heart - *August 4, 2011, 6:26 pm*
(Aug 4, 2011 08:04 AM)username999 Wrote: *[CITE]* umadbro?

Actually, no, I didn't copy your thread. You didn't invent doxing. I posted a lot more methods in my tutorial, which in your update, you copied all of them.

I should be the one getting mad at you.
you don't want to see me when im mad, just fuck off.

triikz - *August 7, 2011, 3:20 am*
Nice tut, helped me out! :D

akj4 - *August 7, 2011, 4:05 am*
Good thread. I have a question. If your computer had an RAT and you found out the IP of the owner, would you be able to take it to the police? What about in different countries? I can't seem to connect to my RAT on a VPN because it's too slow so I have to use my real IP.

Sweat Heart - *August 7, 2011, 4:23 am*
(Aug 7, 2011 04:05 AM)akj4 Wrote: *[CITE]* Good thread. I have a question. If your computer had an RAT and you found out the IP of the owner, would you be able to take it to the police? When you have your RAT as a connection it's possible to find the outgoing IP. But when you remove the entry in your RAT the connection will be broken and is gone. (unless the router keeps loggs which only more professional does)

kaz0224 - *August 7, 2011, 8:08 am*

what exactly is dox mean? sorry dumb question

Sweat Heart - *August 7, 2011, 8:16 am*
If you don't know what DOXing is, please read this (Click to View)#What is DOXING?
-The question has been brought up several times by many different people. Everyone has their own opinion on what it is in my opinion it is someones life in a text document. From DOXING you learn to be the person you can kind of think of yourself as a spy there is nothing you can't learn or do from Doxing.If someone's DOX were to be "dropped" as some say before you know it people know your life. They know where you live, what your house looks like, your family, your friends. They learn your life and all it takes is the Internet from the internet you will learn everything about them. And to be honest it sucks, but DOXING is a powerful tool.

DOX looks like:
(1) Name

(2) Gender

(3) Birthday

(4) Age

(5) Website

(6) Email Id

(7) Social Networking Site Profiles -> Facebook/Yahoo/Orkut/Twitter/My space

(8) Location/Area/Country

(9) IP – Address

Techie??? - *August 7, 2011, 8:51 am*
Good Tutorial. Keep up the good work.

Off Topic : 50th post for me.

TTG_Ajax - *August 7, 2011, 9:08 am*
can someone explain swatting more? Someone threatened me with that yesterday if i disputed the transaction (i had the right to dispute, he scammed me). The video is down.

The Ion - *August 7, 2011, 9:23 am*
thankx a man a 5 star tut really helpfull doxing is childish still some fags do this nice tut keep up the good work it is nice to have awesome people like you around

Skalm - *August 7, 2011, 12:23 pm*
Love it, would rep if i could.

Glad that I helped, how did it end??

mem0rex - *March 18, 2012, 12:57 pm*
Nice tut
Dont forget to use stolen accouts :D
I use a stolen youtube gmail and others for most of my stuff.

sh000t - *March 29, 2012, 6:14 am*
Wow, Finally found something good that I can use for my school!

dstaire - *March 29, 2012, 8:23 am*
Great tutorial, will help alot of people out..:D

Korvinus - *June 20, 2012, 10:49 am*
Simply Great the tut. I'll need some more . Could any of you smart and experimented people tell me how is it possible that some one hacks mu yahoo mail acount and starts sending annoying messages to all the people was in my addres book? No one at Yahoo staff gave me an answer. Could I trace the guy (suppose russian by some mails my contacts sent me to check) till his hell machine?

Thanks and again: Congratulations for the tutorial

Sweat Heart - *June 20, 2012, 1:36 pm*

They probably have your adress book, they send emails from you without using your email being captured.

SMTP is a old protocol which has the ability to send mail under other email names.

lurk3r - *June 20, 2012, 3:19 pm*
Very Nice, very detailed, good guide :)

Mr.Phoenix - *June 20, 2012, 10:07 pm*
Awesome tutorial :) keep it up dude :) :)

Pantheon - *June 21, 2012, 12:00 am*
This is a decent tutorial I guess.

It's all common sense though.

33Arsenic - *October 1, 2012, 1:55 pm*
Nice tutorial, keep up with the good work mate.
Thanks for sharing!

?Mind_?Control™ - *October 1, 2012, 3:25 pm*
This is pretty neat. I like it, lol. Why is his account closed, though?
This was HQ.

soccerky126 - *October 1, 2012, 5:53 pm*
Thanks for the guide man, will be sure to use it to keep anonymous and not get d0xed.

Nathan09161 - *October 3, 2012, 9:24 pm*
Thank you! This helped me realise that tracking people over the internet isn't really a hard thing to do.

h3xt - *October 5, 2012, 3:00 pm*
thx bro good tips for offense and defense :)

lidorx36912 - *October 5, 2012, 5:24 pm*
thx very much!!! its have help my!!

secret4582 - *October 5, 2012, 8:29 pm*
Good tutorial, but most of this shit is bare bones basic. Don't post meta data & think before you type.

Jethro™ - *October 6, 2012, 11:19 am*
Great post, Should help a lot of people stay anonymous and not get DOX'd

Ardi22 - *October 6, 2012, 12:45 pm*
Awesome tutorial! Good job bro, keep it up! :D

lplop99 - *January 2, 2013, 12:56 pm*
I was DDOS'ed lots once, I contacted BT and they just went on about DDoS attacks not possible an McAfee which is bull. :/
But, apart from that, very helpful tut, thanks! :)

Callum. - *January 2, 2013, 1:41 pm*
You dont think people cant get your ip on msn or other chat services in seconds?
Holy shit some people...

Hacker 4949 - *January 29, 2013, 3:59 am*
http://10minutemail.com

This is so impressive.

Thank you.

Hard Style - *January 29, 2013, 7:32 am*
Very nice guide , Thanks for the share!

zzxxcc - *January 29, 2013, 9:44 am*
This should help a lot of people, nice job.

Scooby Doo. - *January 31, 2013, 10:28 pm*
Nice guide, I encourage a lot of you idiots to give this guide a look because a lot of you skids can really benefit from this.

134235623 - *July 20, 2013, 8:48 am*
Great guide. Thank you very much for sharing!

pstopman - *July 20, 2013, 11:08 am*
my IP address says i live in Alabama and i live in Illinois, idk y lol.

wtf :O

kaliowned97 - *December 13, 2016, 6:23 am*

This is very interesting and it looks like you put in alot of work. Great job.
