Thread: How to make your hardrive unrecoverable

Xelteam - *July 8, 2012, 3:15 pm*
Just wondering, how do you make it so your hardrive files can never be recovered?

AOITGeek - *July 8, 2012, 3:23 pm*
It all depends on how forensically sound you want it to be (e.g. the FBI/NSA pulling off your documents or your buddy with a cracked version of a forensics program). If you say #1, see the below link. If you want #2, there are a few programs out there that like Wipedrive or BC Wipe (I've got both if you need them).

A big mallet will do fine. If not try a bigger one.

You take a bucket of lava and you slowly poor it all over the hard drive - that way it wont recover.
