Thread: [TUT]Crash your Enemy PC if he locked in your RAT

Jinu - *December 5, 2011, 10:32 pm*

Crash your Enemy PC if he locked in your RAT

Hack Control Panel and crash someone's Computer
If u want to crash someones computer.

You can do this way.

Step 1 : Go to start and open search
Step 2 : type .cpl and press search botton
Step 3 : then u can find all control panel extention type files.
Step 4 : delete all those files
Step 5 : restart that computer.

Result : 1.Desktop will not work properly
2.You cant open My Computer anyhow
3.Cant Open Control Panel
& many things will be disordered.

Backup : If You want to back up for those files,what you have to do,1st search then copy and paste those .cpl files in a separate folder on desktop,then delete those files from actual target folder,which is C:\WINDOWS\system32

Enjoy!!

Pretty much enough to scare an enemy! xD

Masterbyte - *December 6, 2011, 6:49 am*

Thank you for the tutorial it's a nice defensive tactic :)
