Thread: PayPal Balance Checker

Banks? - *December 28, 2011, 12:49 am*

Okay, so I was bored and I needed this to check my balance for paypal periodically and see if I got a payment or not.

Here's what it does:

Every 2 minutes, it refreshes and checks your balance, and displays it in a notifyicon.

It can be much better, this is just something basic for me, not like I need it to be super fast, with webrequests or anything. Yes, it uses a webbrowser.

There are no binaries, so I can't be bothered to scan it.

Like I said before, if it doesn't work for you, it's because I made it to work for me. It might be because your paypal isn't american, or something like that. You can try and fix it for yourself if it doesn't work, but to be honest I doubt anyone will even use this.

GIF:
[img]http://cod3z.com/pp.gif[/img]

Here's the source (no binaries):

C# (Now updated, shows who sent you the latest payment) - http://uppit.com/017sm3d3abyl/Paypal.rar
VB - http://uppit.com/aeyukfo4jlip/PayPal_VB.rar

Credits: UbbeLoL for his GetBetween function.

Coleak - *December 28, 2011, 2:41 am*

Not super useful, but have to admit its unique, and above all else, thats what this section needs.

Ærion - *December 28, 2011, 2:46 am*

Er, it's with WebBrowser :/
But thanks for sharing !

d0to - *December 28, 2011, 2:56 am*

Thank you for this nice share, I'll be sure to use this when I trade in the future.

Banks? - *December 28, 2011, 12:37 pm*

I'm rewriting it to use WebRequests with the help of someone else who's teaching me WebRequests right now. ?

Ingenuity - *December 28, 2011, 12:48 pm*

Who might that be? I'd be keen to learn.

Well I didn't say the persons name, because I didn't want him to get bombarded with messages because of me. Send me a PM and I'll tell you.

xVector - *December 28, 2011, 1:08 pm*
This is nice, i mean really it's worth it but for some reason even if you are trusted, i can't really trust the program :\ sorry buddy i hope you dont mind!

There's no binaries in it. It's a source, if you can't read the source, then that's your problem.

I read the little code there was in the source and it was completely clean.

This is kind of like my PayPalX application except with webbrowsers?

Banks? - *December 28, 2011, 7:58 pm*
(Dec 28, 2011 08:52 PM)Cody8295 Wrote: [CITE] This is kind of like my PayPalX application except with webbrowsers?
Except less functional, yeah. I'm not gonna lie, me making this was a combination of an idea of mine, and me remembering seeing a thread about PaypalX a long time ago.

Yes, please. :3

The person who was teaching me before I fell asleep, won't answer now.

I'm wondering if the login request is complicated for PayPal. I'd assume they send so much shit out that it would just be a hassle.

But then again, I've never sniffed the requests yet. Might check them out and see if its easy or not to get the login cookie and nav the site around a bit, would be nice for a personal project.

Nice idea regardless.

It can actually be requested and completed with only 2 values (user and pass)...

(Dec 28, 2011 11:10 PM)Cody8295 Wrote: [CITE] It can actually be requested and completed with only 2 values (user and pass)...
Very surprising. I haven't checked because I figured a bunch of values would be passed and I didn't want to use up all that time.

That's hilarious.

MoBaT - *December 28, 2011, 10:17 pm*
I checked the request long ago, the last post I could not find where it originated from. Might be some encryption.
(Dec 28, 2011 09:04 PM)?anksy Wrote: [CITE] Yes, please. :3

If you need help with requests, I can help you. Done it for a long time.

Cody8295 - *December 28, 2011, 10:28 pm*

It is, however, it's not a mandatory post value. There's actually 2 of them that generate based on the form values, it's strange, but unnecessary.

Banks? - *December 28, 2011, 11:01 pm*
I tried what I had working with a Canadian account, and it worked fine. Then I tried it on my American account, and now when I send the post data, paypal sends back a 500 internal server error. I'm not really sure what's causing it...

If you can help me, add me on one of the three IM's in my sig please.

iRtehLeet™ - *December 28, 2011, 11:14 pm*

Sniff the request logging into a Canadian account, then sniff logging into the American account and compare the data.

I would suggest a proxy or something, logging in to both from the same IP will flag a limitation as far as I'm aware.

I've already done it, so fuck it.

US:
Code
login_cmd=&login_params=&login_email=emailz&login_password=passwordz&target_page=0&submit.x=Log+In&form_charset=UTF-8&browser_name=Firefox&browser_version=9&browser_version_full=9.0.1&operating_system=Windows
Canadian:
Code
login_cmd=&login_params=&login_email=emailz&login_password=passwordz&target_page=0&submit.x=Log+In&form_charset=UTF-8&browser_name=Firefox&browser_version=9&browser_version_full=9.0.1&operating_system=Windows
The exact same thing.

Cody said you only need 2:

(Dec 28, 2011 11:28 PM)Cody8295 Wrote: [CITE] It is, however, it's not a mandatory post value. There's actually 2 of them that generate based on the form values, it's strange, but unnecessary.
Try to

Code
login_cmd=&login_params=&login_email=emailz&login_password=passwordz&target_page=0&submit.x=Log+In

Devil Dog - *July 31, 2013, 10:50 pm*
I know that I am really really really gravedigging, but I really need this and was wondering if you still had this lying around maybe and could update the link for c#? Please and thank you.

Ok, now was your post really necessary? Yes, I was gravedigging but atleast my post was relevant

to the thread kid.

?XilluX - *August 1, 2013, 1:22 am*
At least you gaved the Source, otherwise I ´d not trust. Thanks !
