Thread: {FUD}{USG}Trading private C crypter Source{USG}{FUD}

**TrueLife** - *October 29, 2013, 9:24 am*

Hello, welcome to this crypter sale thread.
I am selling/trading this due to a failed time-waster deal that went sour...
It has very basic gui, but it's good enough for my liking.

Features:

[+]90% dynamic stub (USG)
[+]Absolutely zero dependencies.
[+]Icon changer
[+]Re-aligns PE headers
[+]Automated EOF support
[+]Personal support from myself for 48 hours.
[+]Persistence

Pictures:

More info:

This was written by myself and a friend.
The stub has never been released to the public in any form, such as a crypted file.
I can provide a teamviewer session in which I will show myself crypting a file of your choice and I will scan the file afterwards then send you it to for you to test it works - if completely necessary.

I will be happy to trade this source, since it's only sold once.
PM / post offers.

Do you want installs or something else for it ? sent me your Christmas gift list to me.

Thanks,
Continuum

Do not trust Op, He is a scammer.
He sold the crypter to me and my friend promising to teach on tv.
after making the payment, he had handover a broken source and went offline.

You have no clue what you're on about, Im fixing the issue with him now, and it's on his side.
GG.
