Thread: HIDE keylogger/Rat in a jpg(picture)

awsomee - *December 31, 2011, 1:42 am*

hello everyone!I have broken my head to make it and i finally i made "a hole in the water" .I m trying to hide a key/rat ,inside a jpg picture,but i cant.I dont want to rename the final file(with server),to .com or something like that.I want to make one file (server+a picture) ,and the final file to shows like a jpg photo.

I tried with good binders but nothing.One time,It wanst fud and the most time the final file didnt run. :/.

Also ,if someone d like to help me,i will apreciate that!

thanx for your time!

You dont really need to bind it, if you change the icon and use an extension spoofer it should be fine too :)

Where is a working clean copy of an extension spoofer, without any sharecash links? Would you please PM me and the OP with this? Would help greatly.

Thanks in advance.

If you want to convert the file to .jpg and still be able to run it, you will need the jpg file and a shortcut to "cmd.exe /c filename.jpg". Replace the "filename" with your jpg name.

To run the keylogger, the victim has to run the shortcut file.

DexHacker - *January 6, 2012, 8:58 pm*

All the binders that i have found do not run the jpg file, so i code one that does, if i get enough interest, i will code a binder app to go with it.
