tk's, maybe next time an admin will warn the guys trying to spam the thread instead of deleting my 25 page thread full of vouches, good reviews and over 12k views

n00bz0r - January 30, 2011, 1:28 am

Don't worry about the haters mate! Big vouch for Saddameu. Stop trashing his thread because you are jealous.

PS: Nice job deleting a thread with so many vouches. Good work Staff! pff

IamWholam - January 30, 2011, 1:42 am

I bought and all is working. Thanks !

RSSThief - January 30, 2011, 2:17 am

I again vouch for this guy and his crypter. Works great so far and he's been a huge help on MSN.

And by the way, his old thread was deleted and had 25 pages of vouches and reviews. So new customers shouldn't piss themselves if they see little replies here.

ManiaC89 - January 30, 2011, 3:33 am

I don't know why old thread was deleted..

n00bz0r - January 30, 2011, 5:53 am

Vouch for saddam. He has a lot of vouches and satisfied customers and he does not deserve to have his thread deleted.

IcomplexI - January 30, 2011, 5:54 am

vouch for saddam buyed one good crypter works

on my ddoser and blackshade bot

mastergun - January 30, 2011, 5:56 am

Trusted seller, he is legit.

bought it from him works great!

Vouch for him guys!

pichingo - January 30, 2011, 6:05 am

I bought this software and work on every rat i tested it on. Helpful and updates quickly. Best packer I use so far A++

Vouch for Saddameu

xtrem34 - January 30, 2011, 6:06 am

Bought this 2 days ago and it's just amazing, I never got vics so easily

Thanks a lot and Vouch for you man

Risheng - January 30, 2011, 6:31 am

Why a new thread ? :P

Anyway, I'm going to buy it soon ! :D

Developer - February 1, 2011, 1:08 am

Saddam is a man of his word. I gave him a hard time at beginning when we started doing business just for the laughs, but he gracefully went along.

His products are legit and one of a kind.

His crypter works with BlackShades, Darkcomet, Cybergate, and a few others that I have tested.

Why spend a crapload of money when you can get quality work from an honest man? Big vouch for him from me.

ReallyReallyBored - February 1, 2011, 9:43 am

Got his Crypter a few days ago, and I had some problems getting it to operate. He spent time with me on teamviewer/msn to get things operational. As of this morning, completely FUD and was able to install easily on a test machine running Avast. Big vouch, and the extension changer is awesome.

Fiddl - February 1, 2011, 11:25 am

Hello saddam eu,

My friend bought the crypter with you and the first 2 months was fine.

Now his pc crashed and did a reinstall of windows and he send you a message several times to set his hwid again.

Till now you did not even respond at his mail.

I hope that you know who the sender is so check your mail and activate his crypter please!

jekfe01 - February 3, 2011, 6:45 am

Are you sure the autostart works on win7 and win xp?

I tried to crypt a darkcomet server and infected a test machine.

Everytime i boot the machine there is a window: are you sure you want to open
../apddata/server.exe, when i click no the server won't run in the background.

Or did i do something wrong ;)

Btw when i shut down my test machine (thats infected with darkcomet), there is an error about
svhost.exe that it could'nt be closed down.

Every victim has this also? Somehting to do with the crypter or with darkcomet?

Vouch for this guy!

Fast support and cool crypter!Your first error is due to a feature in windows. Everyone gets it. To get around it spread as .rar or use a downloader, dark comet has a very good built in ASM downloader.

The 2nd error is caused by the crypter. But should be fixed in the next version, thats what saddameu has told me atleast.

Cyber Coder - February 3, 2011, 11:25 am

i will fix that error in next update...is unimportant...but the time is not on my side...i also need to learn for exams:(

So i didn't do anything wrong saddameu like you told me a few messages ago ?...

I will try the ASM downloader in darkcomet, thanks for the hint!

And the 2nd error is a problem for me because some people told me: when i opened up your program, i got an error message when i shut down my pc... So they know this error message is because of my server.exe ?

But saddameu told me that this will be fixed in a new update!

BTW for any other guys who doubt to buy this crypter

xtrem34 - February 5, 2011, 1:06 pm

Bought this crypter 2 weeks ago and my server is still FUD 0/33 !

Really easy to use and nice functions :)

CrashOverride, i can say you that u will not regret it if u want to use with rats, it's a very nice crypter, never lost any vics

Vouch for Saddameu

Mate read the tut ;)

You have to let darkcomet configuration by default, don't active persistence instalation with darkcomet, you can only active keylogger.

You will configure what you want with the crypter

With this configuration, my darkcomet server works fine and i don't lose vics

I really like this crypter & the responsivness (reactivity?=hope it's like that in english) of Saddameu: as soon as it's not FUD anymore, he RE-FUD it! So we don't have to wait ages be4 a new update. And I also like the Assembly feature that comes apart from the crypting so that I can also change the assembly of other exe programs. BIG BIG VOUCH FOR SADDAMEU! Keep up the good work!

bluntman001 - February 20, 2011, 12:34 pm

This is my favorite cryptor so far ... everything works good and he ready to work with you if it dont :)

Would be great if to add

clone file info

clone creation date

It uses Fly Crypter, it is very convenient, time saving

Still lacks Spreader Options

LAN

zip, rar

USB

etc.

Hopefully these features will be in new versions

Thanks for your support!

Didn't normally have a problem but recently I'm noticing WimPrivSe.exe installing on ALL infected users. I did some research on this executable and just found it that provides management information and control in an enterprise environment. However before I didn't see this on any of my bots and even myself when I tested it. Just alarming seeing EVERY user I infect with it and considering I've lost around 300 bots in the span of 2 days. I've tried using other crypters and do not get this WimPrivSe.exe installed on infected users.

Is anyone else noticing their bots with WimPrivSe.exe in the processes? Might be something on my end but I'm posting this here so I can get some feedback from other customers.

I seriously reject this scam report.

I always get updates from saddameu.

i know this guy, he is annoying saddameu coz he has some personal problem with him, and that's why he is doing all this crap!

I vouch this guy, very legit and very very helpful.

johnmaylives - March 6, 2011, 2:29 am

all customers are happy and satisfied except you brother :). so if there is a problem, this must be between you and saddam. not about crypter....

have a nice day.

He didn't updated me without any reason, what would you say if he removes your license without telling you a word?

I bet he comes with "You gave cracker my files" which is not true. Even IF i did it, its not breaking any rules. As he never said in his tos that we are not allowed to share the files. And i never cracked anything, im not releated what hellboy, you can blame him for that but dont get your anger on me and remove my license because of that, Thats called a scam.

@Saddams its funny how you get your customers to "Vouch" for you.

no one is complaining except you Marcel.

when i was talking to marcel while my crypter is not working, that time i didn't saw that i already got an email but that was in spam.

i download updated crypter and it was working like a charm.

He never ask me to pay extra money as you were saying into chat marcel..

evilfree - March 8, 2011, 7:56 pm

I've never seen a crypter updated so fast... You can say what you want about this crypter but me too I've been slave of many other crypters and this one is always FUD. One detection? = updated. One bug? = updated. And you can always talk to him in MSN. It's pleasant to see he's really involved in his crypter. BIG BIG BIG BIG VOUCH for Saddameu!

evilfree - March 8, 2011, 8:54 pm

No crypter is FUD for long. Don't forget AV always update their DB and if only one person scan on virustotal or forget to check the box "do not distribute the sample" we're screwed. That's why we need fast updates to re-FUD it as as soon as it's detected and that's why I will always give my vouch to Saddameu.

Ushori - March 9, 2011, 6:49 am

BIG Vouch from me, even Saddam did'nt wanted because of my status at forum :(.

But ya.. I think Saddam's should add virustotal blocker to crypter. And when user opens crypter he has to accept that virustotal is blocked.. And if user tries to use virustotal with some tricks he will

kick/block/banned 4 life.

Dunno why someone want to scan file on virustotal--but ofc there's possibility that some victim scans suspicious server.exe at virustotal and we're not so FUD after :/.

Hi,

In the tutorial for Cybergate you say that Install is disabled and inject into default browser is

selected. In the Crypter there is no way to stop it from injecting also? its default is svhost.exe will this cause problems?

Crysis™ - March 9, 2011, 6:57 pm

Dude, I also use CyberGate.

In the CG only inject into default browser.

In the Crypter select startup.

Done.

Will work inject into default browser.

I found this site on another thread here on HF. <http://vxxxx.org/> . Seems like they do not distribute files. No mention in the TOS but no option not to distribute.

I guess this will be the replacement since novirus is only 9 scanners now.

I edited link so noobs dont upload to the site.. No good I guess.. But what determines if it is suspicious.. ? lol

justanidiot - March 9, 2011, 11:29 pm

@znullz...just use the built-in scanner...works perfect;-) virscan:

Hmmm. it seems there is problem on start-up function or you didnt choose the start-up on crypter ? please choose start-up on crypter. and disable all anti-debug methods...

then try it ;) it will work. i tested on darkcomet working. but i will test for you cybergate now and. i have cybergate v1.07.5.

see you,

Tren1050 - March 10, 2011, 5:49 pm

Yeah took me a while to get cybergate to work, I think it is working now. I just used crypter startup and followed tut that he gave us.

Cyber Coder - March 10, 2011, 11:39 pm

the startup is working perfectly , i dont even know why you like cg so much, dark comet is free, has more options and the server is way more stable then cg

black-knight - March 11, 2011, 12:36 am

I use C.G because i could not get Dark Comet to work - spent like 4 hours and could not get the server to work,not even connect to myself

alain57 - April 6, 2011, 8:22 am

this seams to be interesting :)

before i may buy it, can i ask you a few informations:

1: how does the fake message works when the crypted file is set to start with windows ?

a -> it show only when the user click (never saw this, even if i implement this kind of things on my software really easilly)

b-> it shows on each start. (not really the best part)

2: hoes does the binder work when the crypted file is set to start with windows ?

a -> the binded file also starts (not the best idea to do)

b -> only the crypted file starts (that is really good)

This guy is something else.

I was having some issues, and he helped me over TeamViewer and though he had to leave, he stayed and helped me all the way until the problem was solved.

Best crypter! Still works, infects Vista, Win 7, XP, etc. All features still work, still FUD, updates, everything!

And one unique thing is that his support is literally off the chart. He's helped me out A LOT and ALWAYS solves the problem.

If you're looking for the perfect crypter, look no more. And buy Saddam's Crypter NOW!

Tren1050 - April 17, 2011, 12:20 am

Its Runtime detected by Norton, if a crappy AV like that detects it. I'm not sure what good AV's detect it. Also detected by 3 month old version of Trojan killer :/

Cyber Coder - April 17, 2011, 1:03 pm

@skunny check the news inside the crypter

@yoshi sonar is a very good antivirus and first time when is executed it is bypassed but if you keep testing , it somehow learn and will detect fud for more than 1 week

So this will really generate a text-file which is actually an executable? or just blabla.txt.exe with a txt-file-icon?

trezz101 - April 20, 2011, 2:00 am

First off... This crypter is really good. Way better than that peice of shit OnlineCrypter that doesn't even bypass any AV durring runtime(at least not with Blackshades). What a waste of 5 bucks, lol.

I have a couple questions...

1) Does the scanner still work? Doesn't seem to for me. Is it ever going to be active again?

2) I binded a file. Everything is good, scan/runtime FUD. The only problem is that when UAC pops up, it says "%temp%.exe" as aposed to what the exe is actually called. How do I fix this? It seems to only be happening to this particular exe. Other files I have binded before are fine.

3) On average. How long does it usually stay FUD? Both scantime and runtime.

4) Ever since I've got it. I havn't been able to access the news section. Is there something wrong with the server? or is it a problem on my end.

5) I want to format my PC soon. What is the procedure to reset my HWID(if u use that system). I just want to know before I do it.

Sorry for all the questions but thank you in advance.

Once again, this crypter is great.

Cyber Coder - April 20, 2011, 8:14 am

problem.

no, i showed to a customer few days ago what he did wrong and why avg was detecting in runtime,
is just a matter of correct using ;) my crypter is bypassing avg and kav even if startup is enabled, of
course if is used correctly along with the rat, but some customers are to lazy to read the tutorial....

Are you binding it with anything? Try turning off startup in Rat and use startup in crypter. protect process off, no activeX in rat settings. Try that, if still doesn't work, let me know and I'll give you another suggestion.

sepsep12 - May 27, 2011, 10:42 am

stopp stressing saddam when the crypter get detections. he fix it very fast in comparison with other crypters.

also the crypter stays a long time fud. other crypter dont!
i have tryed a lot of crypter before, but saddams crypter is with distance the best crypter i ever had!
very easy to use, very very stable, bypass kaspersky, long time fud, very good support!!!
thanks saddam, i hope you will never stop with your nice crypter

I'm not trashing your thread at all—In no way am I rating the quality of your crypter.

I've been using the exact same settings since I first bought it months ago. Just a few crypter releases ago, it would restart and reconnect the user successfully. Now, it's not reconnecting them.

I've just tried it on my computer and it didn't reconnect. However, this may be a problem with Blackshades, although I followed your exact steps on the guide you provided and it still did not work.

All I'm doing is asking for help on why it is not working. I know my settings are correct.

100% FUD run/scan and reconnect after restart working excellent!

You try change injection name,use any similar name of windows proces.
svchot or svchoct or lsas, and name your crypter server let it be unique,
JUpdate,WINUpdate or any similar.
It is a solution to bypass Malwarebytes.

If you put so much effort into coding this crypter, why didn't you make the update automatic??

Are you thinking of making the update automatic?

Cyber Coder - June 24, 2011, 11:07 pm

maybe in the future, is enough for now that you can check if a new update is ready or not, i`m tired of ppl asking me 100 times per day when a small detection comes out, that way, you will know if an update is ready or not

thanks for the vouches guys, i`m glad that you like the crypter;)

Saddam's scan4you account hasnt had any money in it for around 2-3 months now, Saddam you should really think about removing this in the next update as its just useless to have it there :)

Cyber Coder - June 26, 2011, 8:51 am

is not working because is running out of funds, there are few websites which offers 1-2 free daily scan, pm me if you need them

is 0/34 for over 1 week <http://my-avscan.com/result.php?scan=ODIzMDM=> just scanned

Hurf - July 6, 2011, 12:36 pm

Thanks for scamming me back on January 2011.

Took my 25 Euroes and never gave me the crypter; I have proof of purchase.

Proof: [\[IMG\]http://img37.picoodle.com/i576/forever_madness/10ho_c7d_ua9xv.png](http://img37.picoodle.com/i576/forever_madness/10ho_c7d_ua9xv.png)[\[IMG\]](#)

I never really thought about it; and the fact that you never did give me the crypter - But I read some threads about you; and that you might be a potential scammer.

So what are you going to do now? Are you finally going to help me out? You blocked me on MSN probably - Never come online anymore?

I never bothered to report this until now - Because I'm pissed off.

So I will file a scam report against you in the near future - as you haven't delivered, and I purchased. I don't know why my previous post was removed - Must have been some forum glitch - But Saddam... I bought this crypter on the 21st of January 2011; back when the lifetime purchase was 25 Euroes.

Since then you have never come online onto MSN; never gave me my crypter. And never helped me out at all.

Proof of purchase:

[\[IMG\]http://img37.picoodle.com/i576/forever_madness/10ho_c7d_ua9xv.png\[/IMG\]](http://img37.picoodle.com/i576/forever_madness/10ho_c7d_ua9xv.png)

I never really asked about this or filed a report against you because I never really cared - But I think it's time for you to give me back what I payed for in the beginning don't you think? I don't know why my previous post didn't come up yet; but here I am again,
Saddam,

I payed for this crypter (25 Euroes) for a lifetime package on the 21st of January 2011.

And from the date of my purchase til now you have yet to give me my Crypter and or come onto MSN to discuss my purchase.

I never really cared about this - but right now, even though it's a bit late, I am still within my rights to complain as I purchased and you did not deliver.

Proof of my Purchase:

[\[IMG\]http://img38.picoodle.com/i576/forever_madness/10ho_6ae_ua9xv.png\[/IMG\]](http://img38.picoodle.com/i576/forever_madness/10ho_6ae_ua9xv.png)

If you do not help me out now - I will indeed file a scam report against you.

RSSThief - July 24, 2011, 12:49 am

Saddam's crypter is legit. Saddameu is legit. Look at this guy (no pun intended)...in the hospital with 1 eye and still trying to get his update out. Heck, he even fixed my problem logging into the crypter WHILE he was in the hospital. Can pretty damn well say that there isn't another dude on these forums that would go to those type of lengths for their customers.

If you're thinking about getting this crypter, stop thinking and do it. Support is THE BEST support on HF and he's putting out a whole new re-crypt/update tomorrow (or very soon after that).

If it wasn't a little bit out of my pay range, I'd have lifetime support for this crypter because it's THAT damn good.

Get better Saddameu!

No, I use DarkComet v3.2 :)

The settings though are in a pdf you've got when you bought the crypter!

no, 3.3 is uncrptable for most of the crypters, hopefully the coder will fix this in 3.4 ;)

I'm searching for a crypter, that is atleast 1month undetected against Avira and Kaskersky (without to update the crypter or the crypted exe file). Is this possible with this one?

IMPORTANT ANNOUNCEMENT !!!

As my medical condition is now much better and i finished the important exams last month, this month i have more time free than normal, so as a surprise because i kept you waiting to much on last update i`m adding 2 new features on the crypter.I don`t promisse anything yet as i`m still working on them but should be done by the time will get detected and will need refud update, ok , so we are talking here about startup and process persistence , so each time someone will close the process, it will be opened automatically by itself and each time someone (or some cleaner) will uncheck the startup from msconfig , it will magically autocheck itself

mate open the assembly changer that is built-in the crypter and change the file version, company name etc...dont leave on default, and you will have 0/34, also be carefully at what icon you use, some of them are detected, cheers

Hey Saddam,

Do you like to answer a few question?

1. Can i crypt .net files together with non .net applications (e.g. Cybergate)
2. In the whole thread i dont see anything about stubs. Does your crypter works without stubs you have to select while crypting?

Cyber Coder - July 29, 2011, 9:43 am

the stub is included in the client and yes, you can bind your cg server with a non .net app ;)

is a small possibility to be incompatible and yes, your keylogger could be runtime detected, depends of its functions

x88z - August 10, 2011, 3:14 am

Good job bro, here are some questions:

1- does it support UNICODE?

2- is it compatible with CG,BS rat, BS http, SU, and Xpart?

3- does it have automatic stubs update?

4- does it have HWID online?

5- do u think if i use it with alot of care (actually i will use it with just about 10 PCs that's i know them; in other words, i will never publish it because i already have crypter for that) it will be FUD for along time, like three months or more?

6-how long are you planning to keep this project active?

7- does extension changer work with all windows? all Service packs?

8- does it bypass Bitdefender Active Virus Control? plz note im not talking about the scan! im talking about the new smart technology in betdevender that's called "Active Virus Control" which detects the virus by behavior as kaspersky.

Well this crypter has been alive for more than 5 Months and When saddam was in the hospital like most coders he did not give up on his project but in fact worked on it while he was sick. That shows dedication. The Crypter works on black-shades http bot, rat, also the others works with Unicode And if you need to update it just pm Saddam with the username and details that you bought it with and he will reactivate your account. The FUD on this server for me usually last more than 3 Months if you do everything he tells you to do while crypteing your server. And is by far one of the best crypter released on Hf.

The crypter itself can be a little buggy sometimes, the crypted file is very stable though. Never had any problems.

Yes it's coded in VB.net and yes it does have it's dependencies... but why would that change the stability?

crypted file is very stable though. Never had any problems.

Yes it's coded in VB.net and yes it does have it's dependencies... but why would that change the stability?

i dont know what you mean by a bit buggy ,i didnt find any bug so pm me if you got facts ;)last time i checked it was working perfectly

Best Update EVER!

startup 100%, no UAC problems, 100% Fud even with super low quality icons :D

And the thing that i like most on this crypter its that u can have for example 10 blackshades servers running on the same machine, and they work fine!

Vouch for Saddameu!

PhantomMax420 - August 24, 2011, 4:36 am

...Got the crypter 2 me that was my biggest concern. (wouldnt b hard to take the \$ and run), so I can and will verify this so far... The deal itself is straight!! :) I have played with the "basic" features so far testing on (Cybergate-SpyNet-Dark Comet-Xtreme RAT) and so far I am very impressed with it. I will test compatibility on (S&S-Cerberus-BiFrost-SynRat) l8r 2nite. And 2 maybe even resolve a conclusion 2 the big "Q" of "Can P.I. Server run on win7" is my ultimate goal, as 2 date peep have claimed 2 have P.I. working on 7 box'z but i personally have yet 2 achieve this...but removing the startup feature of P.I. (the issues with win7 compatibility) and instead using the start up and install supplied w/ this crypter ... I am hoping to report back that due 2 this purchase I have the beloved P.I. back in the game (fingers crossed..lol) > Time will tell & so will I .. I'll post back with conclusions 2

my pissing around ;-)

Worked with and tested this crypter for a couple of days now .. IT WORKS :) .. just as it is advertised too. As long as you follow the tutorial (fully) this does exactly what it says it does. This is a LEGIT sale and I without a doubt will Vouch for it. Worked on everything I tested with.. with the exception of P.I., still cnt get it run on Win7 even using crypter startup instead on P.I's , but thats OK ..with this in hand its better to move on to a newer updated R-A-T anyway.. Great features, great undetection, and overall just a kick 4\$\$ Crypter :)

Note (Tested on several R-A-T's | Keyloggers | Downloaders) Worked with all :D

Slit Wrist Savior - September 11, 2011, 2:44 am

Does this crypter auto-update or are updates manual?

PhuongBum - September 11, 2011, 4:11 am

It's auto updated. Like the crypter said with me

thecatter - September 11, 2011, 11:00 am

Just paid for it... I added you on MSN so you can send me the file+instructions.

I can't pm on here, so is there an email I can send my payment confirmation and such to?

PhuongBum - September 13, 2011, 8:59 am

@Saddam : can you check the crypter. I got troubles when crypt the bshades http

Thanks for the updates,Sadamm

PhuongBum - September 14, 2011, 3:36 am

Uhm ... The old version worked good with HTTP RAT. But the newer is not compatible with it. What a pity ...

Crysis™ - September 14, 2011, 3:49 am

I did not get the last update
when was the last update?

it's just xviseral update and change the builder and now it don't work....
but it's true the first version of bs http work fine with saddam's crypter .

now suxx

PhuongBum - September 14, 2011, 4:24 am

Will recrypt and tell you it's working or not with http rat. But it really works perfect with bshades.
Vouch for saddam.

roofnat - September 14, 2011, 11:01 am

yes it's a nice crypter
fud very long time

alain57 - September 15, 2011, 3:20 am

i saw 2 people here talking about auto update ????
in the version i have there is not something like this
and the news, as the update button always tells me that the server is offline :'(

does i have a too old version ? or does other people speak of a non existing function

PhuongBum - September 17, 2011, 1:59 am

Does it update ? Where is the latest update that I can download?

jfockyou - September 17, 2011, 1:00 pm

HUGE VOUCH to saddam !!!! I bought the lifetime version of the crypter and i forgot to pay him in euro, he made no problem with that and I wasn't at my home when i bought it so i asked him if he could wait before sending me the crypter and he made no problem with it ! When i was home I had a link waiting in my inbox ! He reply very fast on MSN, and he speaks very well english ! dunno why people complain about that LOL ... anyways ! NICE CRYPTER ! the best I've ever had ! THANK YOU AGAIN SADDAM !

PhuongBum - September 18, 2011, 4:48 am

VOUCH FOR SADDAM !!! FUD AND GOOD SUPPORT !!! EVERYONE, JUST SHOULD FUD YOUR RAT WITH SADDAM :)

alinh0 - September 18, 2011, 5:20 am

The advanced crypter and HQ support makes the price rather cheap.
Really worth buying it.
One of the longest running crypter i ever seen.
Big vouch for Saddameu.

What verion is actually saddam Crypter ??? I have version 1.7

PhantomMax420 - September 30, 2011, 8:28 am
This is a kick A\$\$ crypter .. works very well with damn near every rat I have tested on.. and trust me I have tested many.. Worse I have seen on it yet was a 4/35 detection and that was b4 the latest update. So the reason 4 this post is to tell any shit dips that can not follow directions and do your part of keeping it FUD ..2 do some homework b4 u buy this.... and not screw up its detection by submitting files, etc 4 the rest of us who own as well.. The more action taken to keep it out of the hands of AV submission the longer and better experience we will all have with this fine tool .. if your gonna spend the money.. have the smarts 4 ur own good and others to READ the inclosed info ;) ... keep up the gr8 wrk Saddameu CHEERS :-)

(Sep 30, 2011 11:43 PM)P4nd3m0n1um Wrote: [\[CITE\]](#) mine is 1.8 but s new update is coming because is detectable by some antiviruses
Wow u guys r slacking I have v.1.10 ? ..lmao J/K .. 1.8 is current 2 my knowledge & that was my last u/d just a couple wks ago. It does have some detection but...can be tweaked, Im down 2 a 1/35 detection rate using an older ver of DC with version 1.8 SC .. still working like a charm ? I was in contact with "the man" on its detection with NOD (only detection I cant rid of @ moment) ..quote.. " Try using ONLY startup & junk ..and skip the Anti's, persistence,etc 4 the moment on the crypter side " ..and b sure 2 check out the proper settings in the docs 4 the RAT you are using to assure best UD/FUD results. As I have said b4 in other threads.. Play around, try with pump then w/o,

change icons, try unpacked then packed, change assemblers etc. The smallest change can change scan results BIG time. Also I am sure a lot of people have a favorite RAT ..(fine) , just try using an older version of it with the updated crypter instead of the latest RAT ver.. I have had luck using older RAT src's with newer crypters for years .. peace all and enjoy that crypter..& PLEASE do your part in keeping it FUD (ONLY scan with sites that DO NOT submit samples) ?

Cyber Coder - October 3, 2011, 5:18 am

update released, use the update checker to get it ;)

otinana321 - October 3, 2011, 6:37 am

eCoLoGy - October 26, 2011, 12:26 pm

Vouch for it.

Bought it some time ago. It's a very good crypter it really does the job.

Also the support is very good!

All of you should buy it

Blizzard - October 28, 2011, 12:09 am

I would think about buying this, Good luck in sales.

hey i buddy i hava actually a few questions:

i am using the BS http bot, now to my questions:

- 1) if i use the startup of the bot and crypt it without startup option, is the protected file FUD?
- 2) if i use the crypter and i will update my bots with the fud (updated) crypted file, will the old server deleted and new server installed? or will i get the bots double?
- 3) how long is it average fud?
- 4) how long do you need for a update of the detected crypter?

cheers

cheers1.Is fud scantime, but can't guarantee for runtime with its startup
2.If you use the same startup name that youve used previously, you wont get double bots, i didn't actually tested this, but no-one complained about this
3.Last update was fud 1 month
4.Usually few days

Hacker-error - December 18, 2011, 2:20 pm

Is there a scanner built into the crypter for free using ?

And, can I bind a HUGE file, for example (1Go ?).
Then : Can I put my server on a picture (.png). And then, when I execute the picture, it launch the server in background and the picture ?

Zmind - December 18, 2011, 3:51 pm

nop u dont have free scanner in the crypter..

1g bind? never tried, but i have almost sure you can..

but yes you cand bind the picture(png, jpg etc), or annything you want and it will run.

you can also add startup to the binded file :D

Hacker-error - December 18, 2011, 5:49 pm

But the picture on which I bind with the server, it launch on EVERY start-up (because the startup is ticked for the server) ? because it's very inconvenient :/

Cyber Coder - December 19, 2011, 8:20 am

thanks for answering? to shortt

C++ crypters are too expensive (russian crypt services and etc)

HF c++ crypters suck and still expensive (example : octopus)

Visual basic 6 crypters are detected in 1-3 hours after crypting mostly , lol.
Make some little program in VB6 and scan on virustotal , a lot of "av" detects vb6 executables as malware without a reason.

Saddam's crypter is vb.net not vb6 (.net dependent)

I renew my license of Saddam's crypter,and I get lifetime ,

I vouch 100% for this crypter. Best crypter I have ever used. I've tried many they all failed "Bypass KIS.SONAR.Malwarebytes' Anti-Malware,AVG..." compared to Saddam's crypter, FUD is 2-3 weeks

.(VB6 crypter detect in day not in 3 weeks)
If you wanna buy a crypter this is the best

Well I'm still waiting for this Crypter after buying it you said would give it to me within 3 hours ive currently brought Over 2 crypters and The best rat on here in 1 week... i think its kinda takes the mick for me to wait and not have you even come online after i have purchased and you tell me you be online in 3 hours

I hope I havent been scammed or i hope its not the case that it really aint fud so you not send it to me.

I purchased this about 7 hours ago I was told after Payment that he would be online to give me the crypter after 3 hours because i really needed it, so far he has not responded to my messages and have not given me any crypter, I hate to back your Thread pal but i hate being Lied to.

I hope I'm not getting scammed here!!

Saddam's crypter is fud for like 1week and going on like wtf man great job there..i am impressed ?

Okay, well I don't remember putting in my vouch, so here it goes. It is working great and yes, it is FUD. Not yet tried for how long at a stretch but it is good. The updates are fast whenever it needs one. I have been testing it with BS and works fine.

The only problem am facing is that it is .Net dependent, didn't get some slaves due to the same.

Overall, due to its long time FUD and very fast updates, it is ideal. Thank you :)

To all people wanting to buy this:

Service is GREAT. Bought this last Saturday/Friday had lot's but really lot's of fun with my RAT since then.

Today there was a problem with my/his paypal so (I think) he blocked my license and he

immediately PM'd me here that there was a small problem instantly.

I came on MSN -> we immediately solved it and he reactivated my license. BIG SERVICE!!

If you're not sure (but I don't know why you wouldn't be sure about buying this cryptor) and you don't know which to choose because you don't know if the service is good or bad. Then go for this one. Saddam is an awesome dude.

BIG BIG BIG VOUCH.

@hk4ever18 if you change the default assembly is 2/37. After almost 4 weeks is only 2/37. I'm not even bothering to refund for iKarus and Asauqred, nobody uses them. Fill that assembly with some random things and you will see before trashing my thread with misleading scan results.

justanidiot - May 12, 2012, 9:51 pm

yes...it's the longest FUD crypter here,not like others which gets detected after 2 days:-)
I use it from the beginning..and its always getting better...

sammy93 - May 13, 2012, 3:34 am

1/37 after 1 month is amazing, but still can you make it fud?

Blazer_rox - May 13, 2012, 3:42 am

Vouch for this guy, it is a nice crypter..

pavlosf - May 13, 2012, 5:16 am

Its 5/37 for me.

The best support ive got so far. The owner helps a lot with even teamviewer.

And the best thing is it really bypasses proactives like kaspersky.

I have 5 crypters which they all say they bypass but failed with kaspersky. But this one is great.

Big vouch for the crypter but a bigger vouch for the owner.

the price for 6 months is 45 usd, add me on skype cyber.seal [cyber.seal](#)
and is more fair to leave the vouch only if you are happy with my product, cheers

spiderwebhacker - May 16, 2014, 1:14 pm

i'll soon add you, sorry i've been so busy. does it work on a virtual machine? i dont have up to 25 posts yet if not i would have sent u a PM.

Z00R - May 16, 2014, 1:50 pm

Really nice guys!!!

I bought this for 80\$, really good help from owner and he explained everything detailed. The crypter works 100% fud, 0/40 found!!

BUY IT!

spiderwebhacker - May 16, 2014, 5:12 pm

i just added you on skype and yahoo messenger (sorry i had to rush out and buy some groceries).

spiderwebhacker - May 18, 2014, 12:10 am

Cyberseal is the real deal guys, finanlly a crypter with some real kick and long lasting FUD. Big vouch for cyberseal.

tyraliera - May 19, 2014, 1:29 am

I use Imminent Monitor - it will work with this rat?

How much time will be FUD (the most I care about my rat that was not detected by ESET Nod)?

CyberSeal is an excellent crypter.

100% fud and for a long time, as you can see: http://scan4you.net/result.php?id=ecb2e_b5gigl
There are a lot of options including a very interesting fact that your server fud long.
You can buy it very seriously.

valgalaxy - May 22, 2014, 10:32 am

this is wonderful crypter. fud for more than 2 weeks. never seen such marvellous service. good customer care. goodluck in your sales man

thanh858036 - May 22, 2014, 7:12 pm

do you allow scan with total virus? if i upload and someone scan with total virus the licese will deactivate?

GearCEO™ - May 23, 2014, 12:27 am

Oh my gosh, what are you doing CyberSeal? You always scan on metascan-online? It distribute samples to AV companies. Don't you believe?

Read it carefully: <https://www.metascan-online.com/en/about>

trufxtrader07 - May 28, 2014, 2:43 pm

I Vouch for CyberSeal "Cyber Seal Crypter" He spent almost a day helping me to fix my rat just to make sure it works with his Crypter perfectly which he did sleeplessly. His Got the best support have ever seen. You good bro keep it up, you will eventually rock HF with your good support. Guys try his product and service and am sure you will never regret it.

JarmenKell - May 29, 2014, 9:41 am

My Review:

First impression: Good looking GUI and simple to operate, it includes a tutorial aswell so it is not complicated to handle.

Support: He always helps, he always replys, and in the worst cases he offers TV.

FUD: It is fud, he needs to update it frequently to keep it fud. 2-3 week fud time long lasting.

Price: not expensive

I vouche for this crypter !!

Cyber Coder - May 29, 2014, 9:23 pm

update released

Hey just wondering if this scan also checks norton as i cant see it on the list?

Christina Perri - June 20, 2014, 12:16 pm

An amazing crypter, with even more amazing support! I only need to re fud every few weeks or so and sometimes theres even updates before i need to aswell as the support is so easy to get along with, i was able to pay some money to extend my month purchase to lifetime! Amazing crypter first HF purchase that i havent regretted and i have multiple crypters from hf some even lifetime which i dont even need anymore sense CyberSeal is better :)

Cyber Coder - June 21, 2014, 5:48 pm

CyberSeal continues to provide amazing fud times ?

I bought 6 months , Love the program! Really great!1

anarchy2009 - June 25, 2014, 7:17 am

hi, i bought 6 months package, the price is cheap, this is one of the cheapest crypters!
everyday cyberseal is connect on skype for support, he helped me to crypt my plasma rat!
Yes plasma work with this crypter. add junk code option and video tutorial are great. +1

seler - June 25, 2014, 10:43 am

Big vouch for this crypter, it is really FUD at this moment - not like FileGuardian.

i seriously didnt understand anything from what you said.You thought posting in my sale thread will fix any problem you may encounter easier and faster than just contact me on skype?If you need support ask for it on skype and explain with as much details as possible,your post is useless here, nobody can understand and help you better with my crypter than me;)

I'll vouch for this software. The dev always helps if you run into an issue, and the thing stays FUD.

My only issue, I can't seem to get the binder to work correctly. Tips?

BIG VOUCH !

lemme tell you my story!

I have used many crypters like kazycrypter, razar crypter, i have used data protector, also forever crypter and other ones i dont remeember names now !

i made few fights with crypter authors , then one nice guy helped me his name is CyberSeal

My honest opinion :

after 30 days of using this crypter i am 100% satisfacted user,
support is gold ! very long time fud ! working 100% what author said about product.

Not like other developers

im giving huge + and vouch for this software !

twollybangin - July 21, 2014, 12:58 pm

Hi, i would like to purchase this but i want to know something first. Will i be paying for an account much like i would with netflix; so i would download netflix and what i am actually paying for is my account membership and i'll have to log in with that and then i would be able to access everything? So i am not paying for the download but just the account. If so could i please have the download for cyberseal before i buy it just to test whether it is compatible with my computer. If not then how does the payment work. If i am paying for the software for one month how will that make me only access it for a month, not for as long as i'd like because it's not like you're going to uninstall it from my computer if i run over the month. Thanks.

Looks really nice, i love the theme of it, it's also a clean design to it. Really amazing.

Lexica - August 8, 2014, 10:17 am

I am going to purchase this crypter today hopefully and test it out! I will be back to make my vouch if all goes well :)

OneHundred14 - August 8, 2014, 10:41 am

Big Vouch for Cyberseal. I bought this crypter 2 weeks ago and its really FUD. I tested with DarkComet and Nanocore and work really good. For me its the best crypter on HF.

Support is 10/10. Fast and friendly. Its online more than 4 hours every day, all days. Help me a lot with rat and crypter settings.

If you are looking for a good crypter with 10/10 support, its cyberseal. More than 3 years on HF and 176 pages with vouch in every page.

I love it <3

asalada - August 8, 2014, 12:37 pm

Vouch

Just bought and first time i have a problem with FUD and Cyberseal helped me through and now it is FUD 0/60

Good Crypter and Good Support

Cyber Coder - August 11, 2014, 11:57 am

the crypter hasn` t been detected by any av besides nod for over 1 month !!!!

Up and selling

If your crypted file is detected by NOD32 or other av, just try to play with this 4 options: "inject in" process, "icon changer", "assembly changer" and "startup name" and you will get FUD file.

I got bypass ESET with Darkcomet server right now using this options: inject in "notepad", real notepad icon, real notepad assembly and notepad.exe startup name in appdata. I was experimenting and trying to bypass ESET and work.

Remember dont use virustotal, if you use it your file will be detected in a few hours.

Choose always AES encryption.

ok guys, as you all know, the only problem is nod32 that is detecting in 3-5 days,other avs detect in 2-3 weeks +, 90% of updates are only for nod.I plan to keep it that way and even making it fud longer for nod32.Latetly I got tons of customers and I don't want the fud rates to go down or have a bad support therefore from next week 09/05 the prices will rise with few \$ for each packages so if you still want to catch it at current prices you better hurry up.I will be also adding delay execution and fake message as more customers asked for it.Thank you everyone for buying my crypter and do not hesitate to contact me for support if you got any issue, there's nothing i can't fix !

Seems like a really nice crypter can't wait to get it

Regular Guy - September 9, 2014, 8:51 pm

Does this work with hawkeye logger ???

If so what settings should be used to execute it

not sure what I did wrong, will there be a update soon so it will return to FUD1/35 is pretty bad?is pretty bad that the crypter is fud for over 2-3 weeks for all avs except nod32?nod will always detect the fastest so you don`t need to go mad when it detects, maybe buying a crypter that is detected in few hours by nod will suit you if 3-4 days fud for nod32 is not good for you ! I will release a new update but it will take few days as I`m adding new features

Lol, you know that its not easy to make a crypter?

And that you only have to press a few mouseclicks to crypt your .exe.

1/35 is not bad.

Get your version right now, in 2 days prices will rise !

new update released:

- deleted some useless unused functions as disable task, folder...etc..
- added delay execution
- added fake message

FUD as always

I have to say this crypter is the best crypter i have ever bought its always FUD And i never have problems with it

I have been using this crypter for 2 months ,When i first heard about it I bought LIFETIME its 80\$ and It was 80\$ well

spent it for 80\$ you get a FUD crypter lifetime all updates and he is always on the support always on skype and all around

a nice person to do buisness with if you are new to crypters i reccomd you buy CyberSeal Huge vouch. :)

great news guys, after days of working on it, I think I found a way to make the file FUD longer for nod32.As you probably know, most crypters(probably all) are having eset problems,some customers that own other crypters reported that they are even detected in hours after updates.As you may know, my crypter stays fud for nod32 for around 3-4 days when others detect in 2-3 weeks +.I found a way to make nod32 impossible to scan the file.This, theoretically, should boost the fud time for nod32 from days to weeks.We will see if nod will find a way of detecting my stub faster.

Here is a screen of what will happen if someone will try to scan the crypted file.

[img]http://i.minus.com/jDUQOvTUeqHhG.png[/img]

(I`ve censored the file path).I`m stabilizing the method and i`ll release an update in the next days.

NEW UPDATE RELEASED !

- Recoded the encryption process - Now nod32 is unable to scan the output.
- Added Melt file.
- Added custom startup folder(you can put your startup in a folder or directly to temp/appdata.
- The binded file will start now everytime you execute your file but NOT on reboot(unless you tick binder`s startup)

If you find any bug, hit me on skype with as much details as possible !

..**Novalok**..'s review of "CyberSeal"

Design

Interface is very eye intriguing. Its very user friendly and very well designed compared to some plain crypters i've used (10/10)

Features

Great features and they actually work unlike others(10/10)

Support

CyberSeal provides countless hours of support day in and day out. I've even had to ask him many questions and he never gets frustrated with me. (10/10)

Overall

Great crypter for the price and i would recommend it to all of you!(10/10)

ONE DETECTION but after 5 days is just amazing, this server remain FUD for 4 days, just i've notice all the servers have win7 sp1, and my rate of infection drop, anyone get conections from vista or XP?, I live on a third world country so, there is a lot of XP users here.

PD: After san with NOD, nothing is detected, maybe is a false, so the fudness is 100% good crypter, one of the best i've ver tried

mrpoopy - September 26, 2014, 1:04 pm

Definate Vouch very respncive willing to help long as he doesnt get pestered

Cyber Coder - September 27, 2014, 2:06 am

it was fud for nod32 for more than 1 week with hundreds of active customers when some customers reported that they have other crypters detected by nod in hours. I will release an update soon !

Gt403cyl - September 28, 2014, 6:27 am

Nice when you follow a crypter thread for a month or so and decide to buy, just to find out...

Spoiler ([Click to View](#))

All the good things you read were true!

What can I say but Thanks.

Hey ,

does this crypter work on Windows 8.1? I prefer to pay with paypal

Thanks

Cyber Coder - September 28, 2014, 2:20 pm

I have added a button to make the assembly random, enjoy if you are getting detections, change encryption type !

Hello, I m new in this, I want to know if cyberseal is STILL FUD and if it depends on .net framework?

Hello, I m new in this,I wud like to know the following-

- 1.I want to know if CyberSeal is STILL FUD , if so, how long does it generally stay FUD ?
 - 2.Does it depend on .net framework?
 - 3.I m also confused why the payment is BY MONTH ? Arnt u giving me the original crypter or u'll get my file crypted?
 - 4.Why cant I pay through Paypal ?
- Thnk u.

Big vouch for CyberSeal. I had a few issues on my end but he was there to resolve them.

aph3x - September 30, 2014, 3:47 am

Hi,I cannot pm you since I don't have enough posts? I'm looking to buy one of this,but I will need it to have a reverse binding,so when my crypted file (server and a random exe) will get analyzed it won't blow up my cover,can you pm with an answer? thanks :)

Mikixxx - September 30, 2014, 4:08 am

I bought Cyber Seal few days ago, before I had many others crypters some of them was OK but some NOT OK, then few days ago someone recommended to me Cyber Seal. One day spent on reading about this crypter and I decide to give it a try.

IT WAS THE BEST PRODUCT I BOUGHT ON THIS FORUM !

Long FUD time !

reFUD time takes few hours !

Support is really good !

I recommend this crypter for everyone !

When using this with darkcomet should I leave all of the settings such as load on startup disabled in DC then enable them on the crypter?

I just bought this crypter. Cyber was great support helping me understand how to use it. He also provides a very detailed tutorial talking about how the crypter functions. You have my vouch

Im trying to buy the crypter but paypal isnt working. waiting to hear back from him.

noman1337 - October 11, 2014, 9:50 am

good crypter i bought today
looking good and great supports

Vouch for my big bro, got a license again and I can't get enough of this crypter!

janus19 - October 13, 2014, 3:27 am

Can I run this crypter in Wine (not the actual execution on the target, of course, but setting everything up in Wine instead of windows)?

I don't use windows at all and I would like a crypter that I can run in wine on my kali laptop.

Thanks

franklin83 - October 13, 2014, 2:04 pm

Bought normal license for 6 months, was great, but not enough for me. Bought private stub and it's really fabolous, 3 months fud!! It's impossible, anyway, thanks for all mate! I recommend really for all users that crypter! Thanks for that bro!

josimc - October 13, 2014, 2:22 pm

Just bought this product, and I am absolutely amazed by it. Very HQ crypter, very easy to use and understand. The seller is very kind and helpful and is overall an amazing guy. If your looking for a good HQ crypter, then don't hesitate to deal with Cyber Seal.

Vghworld - October 14, 2014, 12:43 pm

Words cant really describe. This crypter goes beyond in what you see in other crypter. Its always FUD and Cyber provides great support:)

Vouch

Chronogen - October 14, 2014, 2:07 pm

Can anyone comment on the average FUD times of this crypter?

I am asking this because I recently (and blindly) bought some other crypter and it's FUD for maybe a day or half a day.

Not what I expected of that other crypter.

Also how much is a private stub?

olleolsson - October 14, 2014, 2:18 pm

I did recently also bought one crypter that was a scam. I hope this crypter will be one that will be legit.

Can I get an answer about using this crypter in Wine? I don't use windows at all.

Also, I'd be interested in acquiring a private stub too if the price is reasonable.

youdealinwitavillain - October 17, 2014, 9:26 am

for inject in, what do you recommend to put instead of notepad?

Vghworld - October 17, 2014, 9:56 am

(Oct 17, 2014 09:26 AM)youdealinwitavillain Wrote: [\[CITE\]](#) for inject in, what do you recommend to put instead of notepad? Inject is just the title of the name. You can put whatever you desire. Just make sure don't put the same name on multiple slaves because it won't inject very well. That's what I've been told by Cyberseal

hello that a very good features i love it plz how do i make payment and what is ur payment mode
The basic methods are saturated, you would need to find a good unknown method and not release it.

You have 7 posts and you're asking for HALF the price for LIFETIME on one of the most STABLE crypters on the forums? Get out now.

Smh, kids these days..

supreme00 - October 18, 2014, 4:42 am

After using for about 2 months this crypter i reccomend it.

Fud times are like 2-3 weeks , it has good support and the crypter is really stable
Really worth it

HF is blocked in my country, it is hard to access it, I am looking for a good crypter and I only have 44\$ left in my paypal.

I want life time package but I can't afford it.

I am not a kid, you judged me because of low posts while I did nothing wrong to or anyone else on this forum.
