Thread: How to remove watermark from dissolve video or any video with aftereffect template

mohammedkhaildm - *July 30, 2017, 8:32 pm*

HI Guys New Tutorial
How to Remove Background from any Video Stock Footage
1-Download after affect and install it.
2-Get image to the logo only
//It's done with dissolve so no need to find any logo
//You can get to image to the logo by search (water drop slow motion black)
//Take only frame 1 and delete all other frames
3-Download my template
4-change the logo image if you want .
//It's done with dissolve so no need to find any logo.
5-drop the footage to after affect.
6-replace it with footage(red).

?
??? sorry for my bad English.

Code files cdn . com/6ajv2wqovbwq
[code]Password: hackforums . net
[/code]

x2Radzx - *August 25, 2017, 9:22 am*

i just tried this i can confirm it works. Thanks for the tut. There are other easy ways to do this though.

Ahad99 - *June 8, 2019, 1:38 am*

Please help me. The link is not working! Please send me link of file on my email: ahad99.shalwani@gmail.com. Or can you make video of the process and send me.

link plz to download the AE file ?

boutique mydressin - *October 2, 2019, 12:35 am*
Hello there,

I'm a newbie, but very interested in this hack. The link is dead, does anybody have the files ?

@x2Radzx : you're saying that there are other easy ways. Could you please give me one ? I'm very interested, as well as removing the 'shutterstock' watermarks on videos...

Thanks for your help folks

GayRetard9 - *December 11, 2019, 3:52 pm*
thanks for that man it helped a lot. cheers! ?

What will I learn from this tutorial?

A very beginner way of showing you an easy way to create moving text in photoshop that can make your signature stand out

Preview
Spoiler (Click to View)

Tutorial

1 - Create your document with the size of the HF signature space with a transparent background (650x200 max) but for this tutorial I will be using 600x200
Spoiler (Click to View)

2 - Let's add some guides so we can center our text correctly.
To do this enable your rulers with (CTRL+R) and they should appear.
Now to get your guides to appear all you need to do is drag down from the rulers and drag them into the center until you see it lock, do the same for both sides.

3 - Let's add the HF background colour because we will be saving this in GIF format it will need the background.
Set one of your colour pallets too #333333 and just use the rectangle tool to add in a background, it now should look something like this
Spoiler (Click to View)

4 - Now we can add our text this can be anything. I'll just use the font ADAM.CG PRO and start with a basic red colour for now. And then center your text using the guides we put in earlier.
So you should have something like this so far.
Spoiler (Click to View)

5 - Let's begin on the making the text move, this is the only complicated part of this tutorial (it's super easy).
First set your photoshop into "essential" in the upper right hand corner, this should open up your timeline bar at the bottom.

6 - At your timeline section we will need to duplicate our first frame, find the button that looks like this; and you should end up with it looks like this.
Spoiler (Click to View)

7 - Making sure you have the second frame selected we will move our text close to the top of the canvas and it should look like this now
Spoiler (Click to View)

8 - Back down at the timeline select both frames (CTRL+Left click) and we are going to tween the frames, to do this find this button; and a menu wll pop up, we are going to add in 35 frames and then hit OK
Spoiler (Click to View)

9 - So now you should have something like this, and you can save it like this but that's boring we want it too "bounce".
Spoiler (Click to View)

10 - Now we are going to select all our frames and duplicate them.
We can do this by looking in the top right hand corner of the timeline and clicking the arrow that's pointing down and selecting "select all frames" (duh)
So once they are all selected go back to dropdown you just selected the frames in and click "copy frames"

(let's also not forget our original count of frames because it will come in handy later; it should be 37)

So go back into the drop down and paste the frames. make sure paste after selection is checked and hit OK
Spoiler (Click to View)

Thank for the link and the tutorial. Will definitely give this method a try.
Though I have an account at envato element but maybe this will become handful if I need to download from other site.

pipito - *October 2, 2020, 11:14 pm*

Hey buddy! I've been looking for something like this for a long time and seeing comment confirming that your tutorial works, it's just great. Thank you very much for sharing this with us, it's time to download After Effects! xD

Bullup - *November 9, 2020, 4:44 am*

This is indeed a good way of deleting watermarks etc.
There are other methods out there but this one does the job.

minhus - *January 8, 2022, 2:40 am*

hello, could you upload the template again?
