Thread: OmniCoin Mining Tutorial (Solo Guide)

OICN - *December 12, 2013, 3:41 am*

This Guide Is kind of outdated at this point in Omnicoin's Life, To get the most coins you should pool mine or switch to pool if you are currently solo mining unless you have a very high khash rate.

Best Of Luck to You Al! :)

I have received a few pm's from members trying to start mining Omnicoin (I don't mind helping :D).

I have pmed them back a quick tutorial I have written and figured might as well post it for people who are getting started. Will try to update/maybe add pictures once I get some sleep but hopefully this can help get you started :D
Tutorial

1st. Download the wallet from
https://hackforums.net/showthread.php?tid=3923174&pid=36914259#pid36914259

2.Open and let it sync.

I assume your windows so

Open up C:\Users\yourusername\AppData\Roaming

Easy especially if you are on windows 7 just search %appdata%

You then create a text file and ente

rpcuser=omni
rpcpassword=omni
addnode=192.241.154.95
rpcport=43555
server=1
daemon=1

and save as omnicoin.conf it shouldn't be a text file, should just have a blank icon.

Then if you have cgminer or another miner skip to next step, if not

download a miner, I prefer cgminer (If you new to mining use - http://guiminer.org/guiminer-scrypt.html and just plug in the information to use :))

Update link - for cgminer, the offical release is a non-compiled version so here is the original compiled one :) http://ge.tt/api/1/files/5MKMAQ91/0/blob?download

Open another text document in the cgminer or other miner folder

Enter

cgminer.exe --scrypt -o 127.0.0.1:43555 -u omni -p omni -I 15 -g 1 -w 512 --thread-concurrency 24550 --gpu-powertune 20

You may have to bring the I 15 lower if you have a less powerful system, copy and paste that line into .txt file and save as whatever.bat Other settings might need to be tweaked for you, I just copied what I was testing the coin with. (this part got deleted last time I edited- Those settings are mine for my card, it's best to go to https://litecoin.info/Mining_Hardware_Comparison and find your card and use those settings

Needs to end in .bat and should change to a gear icon.

Now open .bat file. If you did everything correctly you should be mining :)

Hope that helps. Hope I didn't miss anything but very tired right now so hopefully someone can post if I missed something etc :D

???

Ubernoob - *December 12, 2013, 4:19 am*
Hey what would be a common solution when cgminer sais --scrypt: unrecognized option.. I mean wth it's a friggin scrypt miner

Black Reaper - *December 12, 2013, 6:11 am*
Thanks for the tutorial bro mining OMC :)

Dorian Nakamoto - *December 12, 2013, 6:54 am*

Use version 3.7.2 or earlier. All version after that have scrypt deleted

Flows - *December 12, 2013, 8:23 am*
Never mined any coins before, when I hover over the mining icon at the bottom of omnicoin client it says mining at 4k hashes so is it working and will I earn anything?

bajingan007 - *December 12, 2013, 8:28 am*
Thanks for the tutorial dude mining OMC... :)

The Real Slim Shaddy - *December 12, 2013, 8:38 am*
Mining did not start the bat file starts and closes itself

(Dec 12, 2013 10:31 AM)The Real Slim Shaddy Wrote: *[CITE]* I am facing the same problem let the author of this post come online
Just wasn't sure if it was only me or others were having the problem, Kinda glad im not the only one. Would make it seem like i can not follow the simplest tut. lol

Remix™ - *December 12, 2013, 9:42 am*
yeah the cmd closes instantly after clicking on the mining.bat I made...

iolaka - *December 12, 2013, 9:49 am*
Try this if your bat instantly closes
cgminer.exe --url 127.0.0.1:43555 -u omni -p omni
Note this is for GPU mining, if you don't have one of the listed graphics cards you won't be able to mine using GPU, altneratively you can use CPU miner (minerd)

Bat for cpu miner:
minerd.exe --url=127.0.0.1:43555 -u omni -p omni -t 3
Should work.

Remix™ - *December 12, 2013, 9:53 am*
The issue is that the CG miner that the OP put to download is an uncomplete file...there is no cgminer.exe in the folder....

Burra - *December 12, 2013, 11:51 am*
(Dec 12, 2013 10:49 AM)iolaka Wrote: *[CITE]* Try this if your bat instantly closes

Congrats man you are mining :)

When you see accepted block you should get a payment to the wallet :)

Solo mining is when you find a block you get all of it.

the pool hopefully should be up over the next day or two.

Glad to help, let me know if you have any other questions etc

???

Try and make sure your client is connected to as many nodes as possible. I am connected to 12 nodes and have gotten no rejects.

EDIT: You need to use --scrypt in your command line.

you would need to download minerd (which is a cpu miner) then use the bat from the original post..just replace "cgminer" with "minerd"

here is a link to a 64bit ver of minerd that should work...
http://sourceforge.net/projects/cpuminer/files/pooler-cpuminer-2.3.2-win64.zip/download

look. my first post was a helpful one :)

bilko89 - *December 13, 2013, 11:41 am*

Can somebody help me please? Thank you!your getting unexpected extra commandline arguments cause your entering it in all wrong... your best bet is to copy the bat from post 1 and just change your numbers....

like you don't type aggression you use -I and worksize is -w...don't know why you have it twice...and diff values? share threads...you have an 8 core gpu? and lastly its --gpu-concurrency 24550...i believe what you were going for with 2047 is shaders...if you have 7970 or 280x it would be 2048 shaders... use this bat...

cgminer.exe --scrypt -o 127.0.0.1:43555 -u omni -p omni -I 15 -g 1 -w 512 --thread-concurrency 24550 --gpu-powertune 20

strait from op...

What graphics card do you have? Try changing it to

Code cgminer.exe --scrypt -o stratum+tcp://omc.pools.doctor-blue.net:3333 -u miner.name -p password -I 19
Also make sure you are using cgminer 3.7.2

Well I've been trying all the different variations of ways that have been posted on here, none have worked, and for the one on your post (for .bat) I get: "pool 0 slow/down or URL or credentials invalid"

Is this a problem on my end or is this something I can't fix? Perhaps with the gpu-powertune 20 at the end am I supposed to edit that to my gpu? if so I have a Nvidia GTX 260 (I know it isnt amazing for mining) so what would I do? Thanks.

It can mine but will get terrible speeds, between 20-30 khash most likely, you will need to at least pool mine.

You will also need to as far as I know mine with CUDA miner for nvidia cards.

I am not to familiar with Nvidia cards, so hopefully someone will assist you in setting up cuda miner, or if you want faster results

http://www.youtube.com/results?search_query=cudaminer

(Jan 19, 2014 02:57 AM)Mr.Coin Wrote: [CITE] What? You are mining lol, im sure you have a low end graphics card though
He's using a cpuminer, so that can be pretty hard to tell.
Of course... While he is mining, I don't think he'll ever earn any omnicoins from solo mining if the hashrate is less than 20 KH/s as the network is about 5 MH/s.

ƒ???????™ - *January 19, 2014, 11:31 am*
i started mining with gpu this evening.. got 1000 coins just after 5 mins and then 3 hours no luck../.. guess thats how they work

Well, no, that's how solo mining works. Join a pool, it makes a lot more sense and gives you a share of the block reward every time instead of giving you the block reward the very few times you're lucky to mine the block before anyone else.

Do you mean to get a block?
It's all about luck. Even though Mr. Coin doesn't want to rewrite the guide to explain pools, I still think it fails to outline the issue with solo-mining.

OICN - *January 20, 2014, 3:45 pm*

I have not had time to rewrite the guide for pools (feel free to make a guide yourself...)

This guide was written right after the release just to help people trying to jump on it, never said it was the best tutorial.

Yes soloming can be a risky game since it could give you way more coins or 0 coins depending on your luck.

The reason I did this solo tutorial is because

1.We had no pools when this was written
2.Most people should be able to figure out pool mining (since it is way easier to setup then solo)

and I didn't think it really had to be done.

1.Signup for a pool
Go to getting started and get the url:port
Put that in your .bat
Create worker user and pass word, put those into .bat file
Forget the .conf settings.

Mine.

There..

Doctor Blue - *January 21, 2014, 12:47 am*

???

Composes - *April 7, 2014, 4:16 pm*

How do we do this on mac? Thank you <333

paulmadore - *May 17, 2014, 8:16 pm*

I can't figure out what I'm doing wrong.

[img]http://grandroyalindustries.com/meg/whatamidoingwrong.png[/img]

I've opened the input/output port for that number. I've even tried using a port that is known to work with CPUMiner.

(Dec 12, 2013 04:41 AM)OICN Wrote: [CITE]
This Guide Is kind of outdated at this point in Omnicoin's Life, To get the most coins you should pool mine or switch to pool if you are currently solo mining unless you have a very high khash rate.

Best Of Luck to You Al! :)

I have received a few pm's from members trying to start mining Omnicoin (I don't mind helping :D).

I have pmed them back a quick tutorial I have written and figured might as well post it for people who are getting started. Will try to update/maybe add pictures once I get some sleep but hopefully this can help get you started :D
Tutorial

1st. Download the wallet from
https://hackforums.net/showthread.php?tid=3923174&pid=36914259#pid36914259

2.Open and let it sync.

I assume your windows so

Open up C:\Users\yourusername\AppData\Roaming

Easy especially if you are on windows 7 just search %appdata%

You then create a text file and ente

rpcuser=omni
rpcpassword=omni
addnode=192.241.154.95
rpcport=43555
server=1
daemon=1

and save as omnicoin.conf it shouldn't be a text file, should just have a blank icon.

Then if you have cgminer or another miner skip to next step, if not

download a miner, I prefer cgminer (If you new to mining use - http://guiminer.org/guiminer-scrypt.html and just plug in the information to use :))

Update link - for cgminer, the offical release is a non-compiled version so here is the original compiled one :) http://ge.tt/api/1/files/5MKMAQ91/0/blob?download

Open another text document in the cgminer or other miner folder

Enter

cgminer.exe --scrypt -o 127.0.0.1:43555 -u omni -p omni -I 15 -g 1 -w 512 --thread-concurrency 24550 --gpu-powertune 20

You may have to bring the I 15 lower if you have a less powerful system, copy and paste that line into .txt file and save as whatever.bat Other settings might need to be tweaked for you, I just copied what I was testing the coin with. (this part got deleted last time I edited- Those settings are mine for my card, it's best to go to https://litecoin.info/Mining_Hardware_Comparison and find your card and use those settings

Needs to end in .bat and should change to a gear icon.

Now open .bat file. If you did everything correctly you should be mining :)

Hope that helps. Hope I didn't miss anything but very tired right now so hopefully someone can post if I missed something etc :D

???

it would be kinda pointless to mine with that. You won't make much and you'll just be destroying your laptop.

And yea, gaming would be pointless while mining.

Rollin Balls - *July 10, 2014, 7:00 pm*
I have 60GH/s would it be worth omnicoin mining?

dhahn85 - *July 10, 2014, 7:20 pm*
(Jul 10, 2014 07:00 PM)mookman209 Wrote: *[CITE]* I have 60GH/s would it be worth omnicoin mining?
60 GH/s is a ridiculous scrypt hashrate, Not sure its even possible. Now, 60 kh/s = not worth it ; 60mh/s = questionable, depending how long you can hold and how much faith you have in OMC rising is value and use.

Obli - *July 11, 2014, 3:02 am*
