Thread: Yubikey 4 with WIRED Subscription

Faith Connors - *June 28, 2018, 12:13 am*
https://subscribe.condenastdigital.com/subscribe/splits/wired/WIR_FAILSAFE?source=FAILSAFE

Yubikey is basically a hardware version of 2FA. Plug-n-play with a USB port, supports all kinds of really big accounts, like Google, Facebook, GitHub, Salesforce, Docker, Windows/Linux/MacOS, etc. list goes on.

It retails like 40$ on the official site.
A WIRED Yearly subscription is 5$.

So you'll get the magazine sub, both digital and physical, and a cool 40$ device with it, for 5$.

I'm gonna do this thing tomorrow and report back on it, but if anyone else wants to go for it, then by all means do so.

Note: 5$ is USA only. International is 10$, but that's still an amazing price.

First issue mails within 6 weeks. You will receive your exclusive YubiKey within 4 weeks after being charged. Offer valid in U.S. only.

No international.

My bad. Thanks!

Meowth - *June 29, 2018, 11:23 pm*
This is a good deal! One thing I found interesting, is if you check the box to opt-in for the digital subscription only, the price goes up to $20.

$5 for a year of physical issues
$20 for a year of digital issues

That makes sense.

Has anyone gotten their yubi key? been waiting over 4 weeks now...

Also, has anyone done this twice? :P

Looks like they are getting rid of these as USB C are taking over
