Forum:Hack Forums

Thread: [INTRODUCE] & QUESTION.

Bullseyes - *December 21, 2013, 1:06 pm*

Hey Guys.

First of all , Im new on Hack Forums..
Im Bullseyes , A beginning hacker, i hope to gain some more skills in the period that im using hack Forums.

But whatever ,

Actually i just wanted to ask a , i think relevant question...

I Just started with darkcomet rat but..
I dont really get user in my list at least some skype contacts but i dont use darkcomet for just that kind of persons ,
Is there any Noob friendly way to earn much user very fast ?
Or Spread the File?

Only i had some problems cause 99% of the user detected a Malware in the file , Witch is pretty Logical but how can i fix my file like that , so peopple their Virus Scanner doesnt detect any malware or Virus in the file?

- Bullseys

[Sorry for my bad English]?[/font]

You use a program called a Crypter to scramble the code of the virus so an Antivirus can't detect it.

If you have any questions or need assistance feel free to contact me and I will help you.

Oh Ok , I dont know if you have any time for this , But how do i Get a Crypter and how do i Scramble the Code of the virus...?

Sorry , Im not so advanced yet

Have a look here for cypters, the good ones you'll have to pay for. However there are some free ones which will do.

Cryptography, Encryption, and Decryption

Once you've installed a crypter , they're easy to use. So you crypt your stub and that's it, you're all good. (Bare in mind, depending on the crypter that you chose it may not be FUD meaning some anti-viruses still may pick it up as a virus).

Well , I readed it , I didnt know something like that existed on Hackforums.
But ill try my best to follow the posting etiquettes and the rules.

Thank you for the tip.?

Go to the market place and look for crypters, but before going and rushing into buying one, make sure that the rat (eg. Cybergate or darkcomet) you are using is compatible with the crypter because if it is not, the file wont work.

And for spreading methods, there are so much spreading methods on the hackforums, some types of spreading methods are:
Youtube = Advertising a cool program which contains a virus
torents = Uploading a torrent that cocntains a virus
IM chats = Finding a chat and convincing people that your a girl and asking them if they want to see nude pics and then you send them the file.

All of the above methods would require you to have a binder, a binder pretty much puts 2 files together, your virus and the program itself, but for the IM chats, that requires a extension spoofer, meaning, if your virus was .exe if would make it show it as a .png

Welcome to the forum. I started with DC first but them moved over to Cybergate. You can download cybergate excel for free, the only challenge is that it limits you to 5 connections at one time. the plus side is that it seems to work flawlessly vs dark comet which is no longer being developed. some one on the forums here did a rat review as well and suggested cybergate over dc.

as the others said above, you will need a crypter. pony up the money and buy one off of here and i think you'll have more luck with it. i recently bought byte crypter. So far so good as it seems to be working as advertised.

Something you might want to know since your a beginner to Ratting is;

1. Never ever upload your RAT to a virus scanning website like VirusTotal because they end of distributing your files to Anti-Virus companies. If you want to scan your file to check if its FUD then i suggest looking for one that does not distribute your file.

2. If you purchase a crypter from here and upload your Crypted file to VirusTotal or a virus scanner that distributes your files, then it is most likely your crypter licence will get suspended and your money would have went down the drain (Happened to me)

3. Getting Bots/Slaves takes time if your a beginner, but don't give up, once you find a spreading method that works well with you, you will end up getting a lot of slaves/bots

4. If you would like to stay undetected, i suggest you buy a VPN such as OpticVPN or nVPN

Hope I helped you, good luck.
If you need any more assistance, don't be shy to post another thread :)
