Thread: [Curing yourself](#)

Nitros - February 3, 2011, 3:38 am

[img]http://img805.imageshack.us/img805/8804/loggeruserbar1.gif[/img]

How to Cure yourself This thread is to simply tell you how to cure yourself if you can't manage to delete the server when you test it on yourself.

1. Download [this](#) curer
2. Open the application
3. Type in the name of the server you infected yourself with
4. Click Cure System

The server should now be deleted.

If you can't remember the name of the server simply leave it as "Server" and click Cure, you will then have access to the things that the server disabled such as task manager and command. You will then need to end the process from task manager and stop it from starting up through msconfig.

Note: You may also need to delete it from the place that it was installed to.

Virus scan of curer

If you need some help don't be affraid to ask me.

This is not my program, I got it ages ago.

Marelis007 - February 3, 2011, 4:01 am
Thanks man, this will help me :D

Red Sub - February 3, 2011, 4:13 am
when i click "cure" i get an error message and i have 4.0 framework installed.

Nitros - February 3, 2011, 4:14 am
No problem (:
Whats the error say?

Red Sub - February 3, 2011, 4:35 am
Look:

BBall Star - February 3, 2011, 5:09 am
Yea, same thing here. But looks like a good program overall! :)

Impurity - February 3, 2011, 5:13 am
Gotta run it as admin...Good release by the way.

atte1000 - February 3, 2011, 6:08 am
Great relase! Will come very handy!

Thanks!

Tontunator - February 3, 2011, 6:09 am
Run it as admin, and works like a charm.
Although I am relatively certain that I wasn't infected, I tried it anyways.

A definite keeper, thanks m8.

Kom - February 3, 2011, 12:21 pm
Thanks for this release - Helps a lot of people out + saves others like me time to show / find one for the person lol =3

Nitros - February 3, 2011, 9:36 pm
Glad its helping people (:
Please do note though I didnt create this, I got it a while back with a keylogger.

Chris Versaci - February 4, 2011, 4:00 pm

Works nice :D Thanks for sharing!

.Astro - February 4, 2011, 4:27 pm

.. Or you can download HJT, delete your process. Get CCleaner or use msconfig, take it out of start up, and then use MBAM to remove the virus if you don't know where it is. Then use a vbs to enable the regedit, and any other disabled programs.

Nitros - February 4, 2011, 6:15 pm

Get CCleaner or use msconfig, take it out of start up, and then use MBAM to remove the virus if you don't know where it is. Then use a vbs to enable the regedit, and any other disabled programs. Or this is alot quicker ?

crack bone - February 4, 2011, 6:33 pm

i love this it works awesome thxs for shareing :)

Valentine !! ? - February 4, 2011, 7:09 pm

Thanks, this works.

If you use Project-Neptune's - do iexplorer [exe].
Or, whatever your Server's Process name is for the keylogger.

Nitros - February 4, 2011, 9:50 pm

And using all them programs you mentioned will teach you ?

And this is to help those that cbf learning when they can just do this.

And this is to help those that cbf learning when they can just do this.The programs that I mentioned tell you what they do, are official programs, and can be used in more than just one case.

Everyone always goes the easy way ...
