Thread: How much LTC/OMC would I make a day with these specs?

**~HF~** - *April 9, 2014, 8:44 am*
As the title says :)

http://pcpartpicker.com/p/3nuL8 ( I will only be spending $500 to get this btw not $1600 )

Thats the whole pc.

Please could some tell me the estimated litecoins/Omnicoins I would mine a day ?

( I can't swap out any parts btw )

Thanks!!

I know I won't make a whole bitcoin in a day just want a estimate of the amount I would make :)

Also how many LTC would I be able to mine with them specs then?

Thanks

~0.0000001? Nvidia is horrible for bitcoin mining, and it looks like this build will be for personal use, its not a good idea to use a machine for both mining and gaming/web surfing.

Thanks for the info, I know, im just see'ing if I can make any money with it as well ( as I won't use it for the first month )

What about LTC and even Omnicoin v2?

**Reticulum** - *April 9, 2014, 8:51 am*

You'd never break half of what that build is going to cost. At most just rack up your electric bill and possibly burn up your card. BTC & LTC mining aren't profitable unless you have either 1) ASIC or 2) Tons of rigs made just for mining.

**Dr.Cooper** - *April 9, 2014, 8:53 am*
It's not worth it mining bitcoins from that at all.

You might want to look into ASIC scrypt miner for mining litecoins or omni coins....

If you want to get some quick OMC, use betarigs.

Thanks was just wondering since im getting it for $500, I was thinking maybe I could BTC or LTC mine on it for like $3-$5 a day but I guess it won't be that good :(

Thanks for the help!

What about LTC and even Omnicoin v2?I don't know about actual numbers of how many you will be able to mine in a day but I would say not much as like someone above said this computer seems like it isn't a mining rig and instead is more of a personal computer mixing the two isn't really a good idea.

That and the fact that if you want to mine crypto currency you should definitely go with AMD over Nvidia all day long.

**~HF~** - *April 9, 2014, 9:05 am*
Yh I know its a gaming computer im buying just wanted to know if it could mine as well :)

Thanks for the help guys!
