Thread: [\[TuT\] How to crypt DarkComet with Sikandar's \(and not corrupt\) \[TuT\]](#)

Genraven - February 4, 2011, 4:50 am

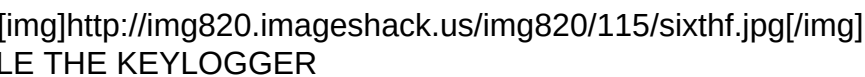

Alright, so I know I've had a lot of trouble not corrupting my DarkComet server when I crypt it, so here's a little guide to successfully crypt your server using Sikandar's Crypter V6.0 (which can be found [HERE](#))

The instructions are in most of the pictures but some are not and will be located below the picture. And due to an image limit of 10, I took out the pictures that involve just making sure nothing is enabled in that tab

Spoiler [\(Click to View\)](#)[img]http://img201.imageshack.us/img201/375/firstvb.jpg[/img]

Spoiler [\(Click to View\)](#)[img]http://img827.imageshack.us/img827/8739/secondi.jpg[/img]

For Module Startup, Install Message, and Module Shield, make sure NOTHING IS ENABLED

Spoiler [\(Click to View\)](#)[img]http://img820.imageshack.us/img820/115/sixthf.jpg[/img]
EDIT: DO NOT ENABLE THE KEYLOGGER

For Hosts File, you can put whatever you would like

For the Icon tab, choose no icon (you will add an icon in the crypter)

Spoiler [\(Click to View\)](#)[img]http://img560.imageshack.us/img560/7691/ninth.jpg[/img]

Spoiler [\(Click to View\)](#)[img]http://img806.imageshack.us/img806/849/tenth.jpg[/img]

Spoiler [\(Click to View\)](#)[img]http://img232.imageshack.us/img232/5240/eleventh.jpg[/img]

Spoiler [\(Click to View\)](#)[img]http://img27.imageshack.us/img27/6878/twelv.jpg[/img]

1. Select the file you are crypting
2. Select BSU & RC4
3. Select your file to inject with
4. Choose an Icon and bind any files you would like with it

Spoiler [\(Click to View\)](#)[img]http://img822.imageshack.us/img822/6074/thirteenth.jpg[/img]

1. Select any type of string encryption (I recommend Polyvorf or T-DES)
2. Add junk codes, fake API's, etc..
3. Press generate a few times

Spoiler [\(Click to View\)](#)[img]http://img41.imageshack.us/img41/8862/fourteenth.jpg[/img]

1. Select Add to Startup and any location is fine as well as an error message or whatever else

Spoiler [\(Click to View\)](#)[img]http://img543.imageshack.us/img543/3552/fifteenth.jpg[/img]

1. Select whatever you want on this tab.. those are the settings I use.

Now select 'Encrypt PE' and save it. Remember to not check EOF.

Sikandar Industries - for the crypter

DarkCoderSc - for DarkComet

I hope this tutorial helps some of you! If you have any questions/comments feel free to PM me or post below and I will do my best.

SIM-353284 - February 4, 2011, 8:10 am

Cool tutorial, good job.

?

Zeldak - February 4, 2011, 8:30 am

2nc comment !

Edit : Works well my server is UD, hey can someone tell me where can i get a RAT which needs no port forward ?

Stenography - February 4, 2011, 3:10 pm

THANK YOU

Dude i if its realy gonna work .. Wow !

EDIT: dude skindar crypter cost 60\$!

Come on ! Can u please upload it and give me link [=

Genraven - February 4, 2011, 3:42 pm

LOL. Got to love leechers... this is just a tutorial, not a giveaway. (it's in the title)

Imm?rtal - February 4, 2011, 4:00 pm

Nice tutorial m8 nice job.

Stenography - February 4, 2011, 4:05 pm

there is free crypter tht can crypt it ?

Genraven - February 4, 2011, 5:45 pm

(Feb 4, 2011 05:00 PM)Verb Wrote: [\[CITE\]](#) Nice tutorial m8 nice job.

Thank you ?

And yes, there are tons of free crypters that can crypt it, but as far as the settings, it would differ from crypter to crypter!

davae93 - February 4, 2011, 7:44 pm

thanks you so much been looking for this but my sickcrypter doesnt have BSU option, I bought the \$60 - Elite Package - With Updates - =). Its awesome

Genraven - February 4, 2011, 9:07 pm

Yeah, I did too, and the BSU option is Binder Startup which if you enable startup in the 'others' tab

then the files you bind with your server will start up as well, but if you don't select BSU then they drop from your server once it's executed.

Use the search button at the top and find a good port forwarding tutorial, I'm sure that will set you straight ?

Bacardi - February 10, 2011, 11:21 am

I don't have the BSU option but I do have version 6.0 (6.0.0.0 to be exact)

What the? :o

Genraven - February 10, 2011, 3:54 pm

Hmm.. Just PM Sikandar using the Support program he gave you (since he is away and does not reply often to PM's on HF).

Bacardi - February 10, 2011, 3:58 pm

I don't have the Support program also. Just the exe of the crypter and the resource.exe.

But yea, already PM'd him about it so I'll just wait till he gets back.

Triny511 - February 11, 2011, 12:23 am

Nice tutorial, would probably be better if it were in that section too. Nice post

coss - February 11, 2011, 1:16 am

hello, thanks for the tut. very nice.

Why must the keylogger be disabled ? I don't see how can it affect the crypter

amila_mp - February 11, 2011, 4:08 am

i need a crypter to crypt my stealer server ? anyone can help me , i can pay \$

Darkcomet - February 11, 2011, 5:43 am

Nice tutorial m8 nice job.

Genraven - February 11, 2011, 10:36 am

You would have to ask someone who knows the code better. For some reason if the keylogger is enabled, it corrupts. ?

I'm sure Sikandar will fix this as well as the other known compatibility issues in the next update ?

fike - February 11, 2011, 11:10 am

If you disable the keylogger , you can't use that anymore..? lame

coss - February 12, 2011, 3:27 am

thats a key feature on a RAT, hope it gets fixed.

Im not experienced on darkcomet, but that can be activated later after the install no?

Malor - February 12, 2011, 4:57 am

yes, it can be activated later after the srv is build :)

Brokengl4ss - March 14, 2011, 3:50 pm

Theres one thing i dont understand bro, maybe because im stupid properly because im ignorant , the browse which file to inject section? , do i have to have vb6 , the whole project1.exe thing i dont get it can u please explain? , ive used the free version of ownz before and it worked like a dream with Dark Comet, this crypter is just as good.

I havnt managed to make my darkcomet server undetectable to Avira yet ive scanned on novirusthanks and it comes up with clean , but the site only uses 9 engines now(not Avira to name 1) so i dont actually know if its undetectable.

when the crypter says browse which file to inject i simply choose my server again.. im guessing this is where im going wrong?

404NameNotFound - April 8, 2011, 1:56 am

Awesome tut man! Good job! +Rep

Bloop - April 11, 2011, 5:48 am

Awesome job, very good tutorial. <3

Tunasty - April 14, 2011, 10:17 pm

Great tutorial man. That would really help people using that crypter

Torrents - April 17, 2011, 10:34 am

Is there any reason why the keylogger has to be disabled? This is one of the features that I wanted :/

If it's disabled before crypting, can it be activated in DarkComet once the victim has installed?

Genraven - April 23, 2011, 12:51 am

Yeah it for some reason interferes with the crypters' .NET framework with DarkComet.. not for sure why because I don't know the code of this crypter or the RAT, but yes it can be enabled once it's installed on the slave, and you could even upload a whole separate keylogger.

Also, thanks for the positive feedback!

burhanafri603 - January 21, 2012, 5:03 am

From where to download sikandar crypter i didnt find the link

Genraven - January 21, 2012, 8:36 am

Have you purchased it mate?

Spoiler ([Click to View](#))not long enough

mark0chaze - January 24, 2012, 7:22 am

thanks man it really helped me :)!!
