Thread: Select the from the calendar and but only select the right uid

Hello,

I've been working with this little piece of code a while and it has not working still dont know why.

Basically I'm trying to get a full calendar and then put the total_profit in going to the days.
Code SELECT calendar.date AS DATE,
    IFNULL(SUM(sells.price),0.00) AS total_profit
FROM sells RIGHT JOIN calendar ON (DATE(sells.date) = calendar.date)
WHERE (calendar.date BETWEEN (CAST(DATE_FORMAT(NOW() ,'%Y-%m-01') as DATE)) AND (LAST_DAY(NOW())))
GROUP BY DATE;
This piece of code works, but when I try to refine the search and put an uid, like
Code SELECT calendar.date AS DATE,
    IFNULL(SUM(sells.price),0.00) AS total_profit
FROM sells RIGHT JOIN calendar ON (DATE(sells.date) = calendar.date)
WHERE (calendar.date BETWEEN (CAST(DATE_FORMAT(NOW() ,'%Y-%m-01') as DATE)) AND (LAST_DAY(NOW()))) AND uid = 2
GROUP BY DATE;
It doesn't work, just leaves the days that it is not null or not 0.00, how can I get the full calendar like the below and still refine the search to only match the uid I want?

Code
```
+------------+--------------+
| DATE       | total_profit |
+------------+--------------+
| 2014-04-01 | 5.00         |
| 2014-04-02 | 0.00         |
