Thread: PasswordSaver (First Beginner Project)

Geeqo - *May 20, 2014, 2:48 pm*

This is my first attempt at doing something with Visual Basic (Don't be harsh) I am willing to learn more as time comes by. I did this project just for fun and to test out different things I could do. So as you imagine this program wont be that great, but I had fun making it :)

1. First thing I made was a simple login, just for fun: Username:Password

[img]http://gfxf.net/images/2014/05/20/12.png[/img]

2. After logging in the UI shows up with "Add new Account" and "Delete Account".

[img]http://gfxf.net/images/2014/05/20/123.png[/img]

3. By pressing "Add new Account", a new form pops up, requesting to add new account.

[img]http://gfxf.net/images/2014/05/20/stuff.png[/img]

4. This is what it should look like when you have added an account.

[img]http://gfxf.net/images/2014/05/20/account.png[/img]

I would like to give credits to Aeonhack for his amazing Net Seal Theme, which can be found here: https://hackforums.net/showthread.php?tid=3409684

I will put a virus scan just in case some people wont rust me. (I don't even know how to put viruses in programs)
Antivirus scan

Download From MediaFire

*Note: I know this program is not good at all and has no big use.

Why did you make a password saver if you can just save it on the notepad?
-I just wanted to have fun, then share my work with the more expert people on hackforms and learn from mistakes.

Since some people were sketchy about my account being "not trusted" I decided to take the screenshot of my project.

Bugs and things to fix
Spoiler (Click to View)
1. When saving the password list and opening it the password are not there.
2. Trying to make the program encrypt the passwords in Base64, hopefully.

The Code

jeiceei - *May 20, 2014, 3:15 pm*
No need to harsh people, just keep up good luck for you.

Simply™ - *May 20, 2014, 3:17 pm*
No offense, but a password storer from a user with less than 50 posts, 0 rep, who isn't a Ub3r, or L33t won't get much attention.

If anyone chooses to use this, be careful!

Geeqo - *May 20, 2014, 3:21 pm*

If you want I can post the source code somewhere?

I made this program for myself just to store a list of accounts into a notepad on the desktop.
I will update the thread with screenshots of the code. :)

southpaw - *May 20, 2014, 3:22 pm*
OP you should use the [code] tag to post your code in so people can review and vouch it that's what I would do anyway

Raz?r - *May 20, 2014, 3:24 pm*
Why does it come with a setup instead as single executable?

Geeqo - *May 20, 2014, 3:28 pm*
(May 20, 2014 03:24 PM)Raz?r Wrote: *[CITE]* Why does it come with a setup instead as single executable?
I don't know how to correctly publish it as an exe. So what I did is i went to Build > Publish
And gave me those 3 files.
Do you know how to change it?

$lick - *May 20, 2014, 3:35 pm*

How can you not know how to compile?

Also this is useless, Saving unencrypted passwords on your PC is a terrible idea.

Geeqo - *May 20, 2014, 3:40 pm*

Its just for no, I'm not forcing anyone to use it I just felt like sharing something I made for myself. That is it, if you have any suggestions please share them.

$lick - *May 20, 2014, 4:03 pm*

Encrypt the passwords, Even a simple Base64 encryption would be better than plain text.

GreyPhantom - *May 20, 2014, 6:12 pm*
After saving when you re open the file, the Password info are still there?
I'd seen one like this before but after I open it again, the password isn't save.

Geeqo - *May 21, 2014, 3:33 am*

Ye I'm trying to figure how to fix that XD Do you know how to?

i.Code - *May 21, 2014, 4:21 am*
(May 21, 2014 03:33 AM)Geeqo Wrote: [CITE] Ye I'm trying to figure how to fix that XD Do you know how to?
First use something like this :
http://social.msdn.microsoft.com/Forums/en-US/1bdd9d69-a2e5-4d9d-bcfb-433a98dd6efd/encrypt-or-decrypt-text

Then just have your app reload / decrypt the text file on statup and re add the entries.

Oscura - *May 21, 2014, 5:35 am*
So the passwords are saved as an unencrypted textfile on your dekstop?
It's good you're learning but it's quite pointless releasing it.
Still though, keep expanding your knowledg e:)

Thanks for your post. I initially made this program for myself and just to start learning some vb :)

Lordude - *May 21, 2014, 10:29 am*
Oh! Thanks for sharing! Bro :)

How i can use this programs?

BerryP - *May 21, 2014, 11:41 am*

You could use XML to allow the user to add his own dynamic Rows. Keep learning ?
And it´s always better to use an DataGridView for this. The big advantage is if you understood XML and everything it´s like one line to save the dynamic settings derived from an object , it´s so awesome ?

Some intresting links:

http://msdn.microsoft.com/en-us/library/vstudio/system.windows.forms.datagridview
http://msdn.microsoft.com/en-us/library/aa286548.aspx

And of course add encryption, use the users password to encrypt them. Than it´s super save. ?

BTW: I don´t know why people say Base64 is okay for the beginning, its SHIT. Its good to understand basic encryption but not for a program used by others.

Peace ?

(May 21, 2014 03:33 AM)Geeqo Wrote: *[CITE]* Ye I'm trying to figure how to fix that XD Do you know how to?
So wait, u release something that is already known to ur knowledge is not working. jesus ?

$lick - *May 21, 2014, 12:11 pm*
(May 21, 2014 03:33 AM)Geeqo Wrote: *[CITE]* Ye I'm trying to figure how to fix that XD Do you know how to?
Encrypt text then save it too a .txt.

Then on start load that .txt and decrypt.

Geeqo - *May 21, 2014, 2:19 pm*
(May 21, 2014 12:01 PM)TheBarret Wrote: *[CITE]* So wait, u release something that is already known to ur knowledge is not working. jesus ?
Is there something wrong or against the rules to release something I made that other people can learn from since i posted the code and program?

$lick - *May 21, 2014, 2:24 pm*

There is nothing to learn from here, You posted a broken unsafe program.

Why would anybody want to learn how to do that?

SubGenius - *May 21, 2014, 3:58 pm*
Damn guys, why you judge so badly someone who is still learning. He didn't made this app for you Lazy neither for TheBarret.

@OP
It's ok to try new things and experiment with projects 'n stuff, so keep coding until you become better.
Next time code a RAT so some people can find it usefull and shove it into their asses.

$lick - *May 21, 2014, 4:13 pm*

I helped him out at first, Just the fact he is trying to say it's more than what it is, Is annoying me.

As far as I can see OP is not trying to say that it's more than it is.
He has clearly stated this is his first project and he's knowledge is currently limited.

Moral help is better than showing him some raw code.

DontMakeHackerWild - *May 21, 2014, 4:24 pm*
I like the idea of the program :)

How did you make The Awsome GUI/layout for the program?
with photoshop?

Psychogenic - *May 21, 2014, 6:11 pm*
Not to sound like an asshole or anything but this is really simple stuff.

(May 21, 2014 03:33 AM)Geeqo Wrote: [CITE] Ye I'm trying to figure how to fix that XD Do you know how to?
Actually not yet, but my ideas was to put it in a database but you would see it. Lol

Meerkat.? - *May 22, 2014, 9:30 am*
Base64 isn't going to solve anything. Encoding <> encrypting! Allow the user to encrypt the file using a password that he chooses himself. Only that's how your passwords will be safely stored.

$lick - *May 23, 2014, 11:04 pm*
Created my own one in about 20 minutes.

It uses RC4 Encryption with a password to save your accounts

The accounts are saved to the settings (Still encrypted) and re-added upon execution.

The site is shown in a listview unencrypted but the username and passwords are shown still encrypted.

You can select the item and decrypt the password using your encryption key to get a message box of your account details.

GIF Here (Click to View)

It can decrypt special chars and all.

Since starting to use a GIF program I have enjoyed making small projects for people and sharing them.

Arrest - *May 24, 2014, 5:59 am*

Goddamn netseal theme ? Lazy beat me to it but you should either encrypt the passwords before they go into the txt or encrypt the document itself. Even at that someone can just decompile and after a short hunt they'll find the credentials needed to get through your log in form. But good for your first beginner project. Beats hello world lol

$lick - *May 24, 2014, 11:38 am*

With the way I save it if they decompile all they get are encrypted accounts.

The unencrypted ones are not saved, They are unencrypted on the spot.

Would you mind releasing your source code?

Cammy - *May 24, 2014, 11:55 am*
As for publishing a single executable instead of a whole setup just go to your project folder > bin > debug > yourapplication.exe

That's it.

ownerx - *May 24, 2014, 12:00 pm*
Looks alright :) Not using it tho, saw lots of these "password" savers already
