Thread: How do make clients on Async Rat pop back up once they restart

DeepHack21 - *March 13, 2025, 4:09 pm*

Hey i was wondering if this rat allows that when a client connects and restarts there pc i loose them idk why please help if theres any other rats that support this.

It's called persistence. There are a number of methods and plenty of discussions on the subject. Some RATs or crypters may call this an 'install' feature. The reason why you lose the clients is that shutting down or restarting a computer kills all running processes. The RAT client needs to be started again in order to be running.

You mean Xeno-RAT? I don't see any feature that will allow you to get by without knowing anything. It's also well-established that v. 1.0 is not very good.

You know that there's a Start Menu folder called Startup, right? That's where we get the term.
