Thread: Open a Form in another form

GHD124 - *August 5, 2014, 1:53 pm*

This is sort of a tutorial and help at the same time.
i am using this code to open Form 2 in Form 1:

Code Dim newform As New Form2
newform.TopLevel = False
Me.Controls.Add(newform)
newform.Show()Spoiler (Click to View)
but is there a way to make this code with, lets say opening mozilla or something?

Cairns - *August 5, 2014, 2:21 pm*

Yes, it is called an addon lol. You can't do it with your logic though.

Euras - *August 5, 2014, 2:26 pm*

I don't know what you mean by "opening mozilla". Do you mean if you click a button on your form, Firefox opens? If so then you would use the Process.Start() method.

By the way, this is not by any means a tutorial.

Yes but all that code is doing is showing Form2. In regards to Firefox, are you wanting to open the browser when you click a button, or are you talking about embedding the browser into your form?

Sorry but you need to clarify what you're wanting a little better.

I would say it's quite clear it's the latter.

Sorry but you need to clarify what you're wanting a little better.i would like to embed the browser into the form, thats a way better way of explaining it.

In that case, you might find this link useful:
https://developer.mozilla.org/en-US/docs/Gecko/Embedding_Mozilla

thanks this will help alot. i will post an update when i get this to work. ?

TheBarret - *August 5, 2014, 4:45 pm*

Holy crap, wtf is with the horrible background, i think my iris just started to bleed... o.O

Dispersia - *August 5, 2014, 5:01 pm*

Why don't people only screenshot the relevant things anymore. So annoying.

Welcome to the .Net Section 2014, where we screenshot everything except for relevant things.

/joke

Washi - *August 5, 2014, 5:40 pm*

Use the SetParent function.

PHP Code
<?php
SetParent(MyForm.Handle, FireFoxFormHandle);

"Assumption, f#cks it up!" thanks for this.

Cisteriaso - *August 6, 2014, 12:09 pm*
thanks, this is helpful! Keep it up.

GHD124 - *August 28, 2014, 12:42 pm*
using this code as an example:

```
Dim newform As New Form2
newform.TopLevel = False
Me.Controls.Add(newform)
newform.Show()
```

i remove the newform.TopLevel = False and i get an error but i would like to make the newform the toplevel how would i get around this?

SIM-1456245 - *August 29, 2014, 7:21 am*
Wtf, TUP already told you. Why no one even looked at it?
