Yea but I mean I can get hulled hemp pretty cheap at my organic food store.

The first line is literally this:

Hemp and weed both come from the cannabis plant. The hemp sub-species doesn't generally contain as high of a percentage of the psychoactive cannibanoids found in weed.

Hemp is used for industrial purposes mostly but also can be cultivated for personal use as it does contain low dosages of THC.

The free samples only ship to the United States.

But it is only illegal to grow hemp seeds without a license from your government there.

So it is legal to own/consume these seeds.
