Thread: [Tutorial] How to setup an VPS Booter

Xenious - *September 30, 2014, 12:32 pm*

Hello,
I will be showing you how to make an VPS Booter, Hope this tutorial will be helpfull!
If you dont trust any of these links/downloads, Dont download
1, Buy an VPS, I suggest: http://www.ovh.ie/ Never had problems with them
1.2, Order an CentOS Vps
2, Wait for the details of your VPS To get into your email
3, Download PuTTy You can download it here:
http://www.chiark.greenend.org.uk/~sgtatham/putty/download.html
https://gyazo.com/f29f637527000a5e1b3f63ab4f6d3495
4, Open up PuTTY, Enter your details.
5, Download WinSCP You can download it here:
http://winscp.net/eng/download.php
6, Open up WinSCP, Enter the detail there as well
7, Now you need an script, I will provide some scripts you can download below
Xtreme Viking Script: https://www.mediafire.com/?dhrr6g6vkgwgdsw
Slap Perl Script: http://www.mediafire.com/download/79e86scxi7eukps/Slap.pl_Script.rar
8, If you use Slap Perl Script Then go into WinSCP And put the Slap.pl file into the /root folder
8.1, If you are using Xtreme then open the folder i provided in the RAR File and drag all of those files into the /root folder
8.2 After you dragged all of the Xtreme files into the /root folder then right click the files and be sure to have these setting enabled on all of the files:
https://gyazo.com/18d673b0b40c8b435394449380da4444
9, Close PuTTY, Reopen PuTTY Login Enjoy!
10, Thats all! ?
Hope this tutorial was usefull! Sorry for my bad english i am from the Netherlands!
Virus Scans below!
Xtreme Virus scan:

https://www.virustotal.com/nl/file/87a2d265e046359452a2c50a9d87935d2c81a948fa27d4d96b0749922371df6a/analysis/1412105417/
It is 5/55 But its not a virus its because its an flooder
Slap Perl Scipt Virus Scan:

https://www.virustotal.com/nl/file/b73e445adc9feb889eec4b191b0f4c33f3ecdbdf247f2496f1d38e24f7bbd800/analysis/1412105426/
Its 1/55 But this is also an flooder so its not an virus
If you dont trust dont download or run Sandboxie or idk.
Thanks for reading!

Nice TUT, But you can't attack with all servers because company will block the server.
So If You Want To Buy VPS Booter
+Unlimited bandwidth = Unlimited boot time
+My Script
+Teach You How To Attack

+Give You First The VPS+Test
+install for you all
Add Me On Skype:
Yovel.izhak0

Very nice tutorial, great for beginners.

Vernet - *April 8, 2015, 8:05 am*
Using OVH for send DoS attacks, you have no idea what are you doing for sure.

Don't do this until you want to get VPS suspend and probably legal issues with OVH Company because you should verify yourself when buying with OVH such as Picture ID and another documents.

I made this tutorial when I didn't really know alot about the hosts. Will update it.
I do know what im doing.

You need an host that allows ddossing and ip spoofing.
vps9 allows both, but you would have to take a look around HF because there are some good dedi's on HF.

Comedic - *May 1, 2015, 9:05 am*
Cool tutorial. I'll check this out in the future.

Vector.A+ - *May 1, 2015, 9:44 am*
gg bro continue like that it helped me very much

This was very helpful in Centos VPS'S But i do have another question, Using this website is there a chance of getting Caught And! If i was looking for a VPS "Booter" would i be looking for 1GBPS Internet speed? If someone could answer this i would be thankful and another thing, WHY CENTOS? Out of all the other operating systems?

All your questions can be solved with common sense. Of course there's a chance to get caught, although it's likely companies will do shit based on how easily they can just suspend you and that be

over with. Yes you want to get a 1gbit port so you can send as much data as possible.

That being said, raw udp is the least efficient method to dos from, and I recommend you just buy a stresser based on my observation of you having little knowledge of networking.

Also, you gravedug this.

jasoncarver - *February 16, 2016, 3:17 am*
Thank you for your answer, And man everyone has to start from somewhere and i'm starting to learn <3

Okto - *February 16, 2016, 2:05 pm*
hi there
ive got some questions about setting up a booter
i want to work with spoofed attacks
do you know some cheap servers which allows it?
can you help me on skype maybe? My Skype: pastebin .com/DFsQDmn5
Thanks in Advance ~ Okto

The CrackerZ - *February 17, 2016, 6:57 pm*
Awesome tutorial thanks mate

dafr34k - *February 22, 2016, 11:55 am*
very good tutorial buddy, will try this, thank you. ;) :)

Svenn0hz - *March 31, 2016, 10:21 am*
Hello, could you add me on Skype for helping me setting up a booter API?

Skype; svenzboy

Zen.exe - *April 1, 2016, 7:27 am*
looks a bit unorganized I'll try this sometime tho

Marlb0ro - *April 2, 2016, 2:47 pm*
posting here to come back later thanks :)

hackforums021 - *April 13, 2016, 2:08 am*
IT helped me a alot. Continue it

zernkska - *April 15, 2016, 2:58 am*
OVH need id verify, so its really bad choice :D

denielsmith - *April 23, 2016, 2:02 am*
Very nice tutorial, great for beginners.

StaveArkle - *April 24, 2016, 12:47 am*
Just for the misinformed...

DO NOT USE OVH IF YOU'RE GOING TO DoS, THEY WILL INSTANTLY SUSPEND YOU.

billou - *May 10, 2016, 1:22 am*
coooool jooob thxxxxxxxx ....

balha - *May 10, 2016, 10:04 pm*
Good tutorial. Thank you very much.
Greetings

Chipher - *June 9, 2016, 9:22 am*
Help ?
-bash: ./menu: Permission denied
