I dont want to say what crypter i use,but i will be UD soon,depends on how many people scan it
So be quick ..

PS:Im not sure if it works on other Keyloggers,i only tested it with Decay

EDIT:Oh yes,here the virusscan:[Click](#)

[Click](#)

Before:

[Click](#)

Yes i know avira detects it but this is maybe the name or the assembly :)

You could send me any file you want(server.exe...)and i bind it with the other file you want

The Negative:

It dont work with the crypted Decay Logger Public.exe

Yes i know this is not good but the crypted.exe corrupts when i bind it with something else

The POSITIVE:

This Service is NOT just for Decay Logger Public Users,everyone could send me his files :)

REQUIREMENTS:

The files you want to bind:Please in a .rar uploaded to Mediafire

Not more bigger than 5mb,otherwise it takes too long to upload,download

This tool here:

<http://www.mediafire.com/?38g1046jzh6gn3a>

With this tool you can change the assembly of your file,plz dont ask me if you dont know how to use it

Its clean

[Virustotal](#)

I know,hackers shouldnt upload files to vt,but this is a builder,not a created virus :)

[Click](#)

its better,because if it not works,then you loose the slave

I'm not risking running it on myself. I usually run it in sandboxie to see whether it works on my pc, but since that's been disabled, i'd rather see if it works on someone else. Plus, i've had loggers work on my comp in the past, and then when i've sent them out or had them sent to test slaves, i have recieved no logs at all.
