your welcome just here to help

KrYpToNiTe™ - *June 2, 2010, 3:10 pm*
Nice tut I wish I had this about a month ago when I installed it lol, but Thanks!

darc - *June 2, 2010, 3:20 pm*
Mad creditz one of the best vb.net coders here ')

eneakume - *June 3, 2010, 4:40 pm*
oh thank u dude. Its good to have full version.

Pens - *June 3, 2010, 4:52 pm*
Thanks for the post and it's awesome that you give credits. You're not like those people that just steal everything for the lime light.

Your welcome and yeah I know ;D Thanks again.

CometJack - *June 3, 2010, 6:19 pm*
You're* Don't* - sorry, I'm just a grammar Nazi, what can I say?

Anyways...

Thanks a lot for the video tutorial, nice job, you sounded pretty professional :) Helpful as well!

maype - *June 3, 2010, 6:50 pm*
Nice tutorial But Just show how to Inject dll into the Net assembly ;)

Add the .dll as a reference I believe.

Dark_Knight_ - *June 18, 2010, 9:08 am*
Any luck with Version 8.7 ???

Toxic Asshole - *June 18, 2010, 9:12 am*

what do you mean you want that version???

.//mickey - *June 19, 2010, 3:15 pm*
Anyway to get this to work with visual basic 10?

Zer[o] - *June 21, 2010, 7:14 am*
ugh need to change "advanced compile options"?

poohead - *June 21, 2010, 7:26 am*
Hmm what exactly does the patch do and what will it look like when i run it??

Zer[o] - *June 21, 2010, 7:38 am*
its a little run box that automatically closes when its done

poohead - *June 21, 2010, 7:51 am*
Have you used it then? sorry just im always worried about these things lol :)

Shellium - *July 4, 2010, 4:18 am*
How do I change it to advanced compile options?

Toxic Asshole - *July 5, 2010, 4:03 pm*
(Jul 4, 2010 04:18 AM)Shellium Wrote: [CITE] How do I change it to advanced compile options?
Sorry please be more specific because I am not understanding you.

Shellium - *July 6, 2010, 1:41 am*
I figured it out, here's how to do it.

Look at your solution explorer, see your project name? Double click that. Now look at properties, all the way to the right is a small window button, click that, then go to compile, then go to the bottom, advanced compile options, look at the bottom of that window, .NET Framework 4 Client Profile should be .NET Framework 4. After that you're fine.

Hi!

Thanks for the TuT man very great and helpful!

But I have a problem: when I compile my program and I test on my father's computer (Windows Vista Home Premium 32 bits) it says "The program has stopped working!".

Screenshot:
Spoiler (Click to View)
[img]http://img693.imageshack.us/img693/9435/testdotnetbar.jpg[/img]

I use Visual Basic.NET 2010 and Windows Seven Home Premium 64 bits.

What is the problem please?

How should I do?

BreakRulez - *August 22, 2010, 5:50 pm*

Nice tutorial Bro,But Just if u could show how to Inject dll into the Net assembly will be very helpfull Thanks

????? - *May 27, 2011, 6:39 pm*

I cant debug... Someone help me? The form does not show up as the skin I am using.
