Thread: [\[How To\] Cracked apps on your iDevice! \[Noob Friendly\]](#)

lolzor60 - February 10, 2011, 3:44 am

Hello guys.

This is going to be a very easy TuT to follow.

I won't put any fancy pictures or text, just tell you how to do it.

Requirements Jailbroken iDevice

Cydia Installed

If you already meet the requirements, just follow this.

If you don't, go check [this awesome tutorial](#), made by the user "Hugs".

Now you want to open up Cydia.

Look at the bottom of the screen for a button called "Manage". Click it.

Now you should see three options. "Packages", "Sources" and "Storage". Click "Sources".

In the top right corner, click "Edit". Now in the top left corner, click "Add".

A little box should pop up. In the box, write "cydia.hackulo.us".

Now click "Add Source".

Now go to the Search button, which is located in the lower right corner.

Search for "AppSync". Download the one that suits your Firmware.

Note: There might be a chance, that your iDevice have to reboot. If it have to, reboot.

Now you wanna search for "Installous 4". Go ahead and download it.

When it's done, look for the app called "Installous" on your Springboard.

When you found it, open it up, and enjoy a free AppStore!

Hope you enjoyed my TuT.

If you have any questions, feel free to ask.

Cheers!

You can just download Installous at the beginning; AppSync will automatically be installed alongside it.

Good TuT though.

Good TuT though. Oh, I didn't knew.

When I was on the 3.1.2 firmware, you had to download it manually.

I only just got jailbroken on the 4.2 yestearday :).

Thanks for your comment!
