Thread: [\[Tut \]How to become the System User \[Tut\]](#)

H4ck3r-B3d0 - February 12, 2011, 1:29 pm

Hi Guys ,,,

Today I'll show you how to become the 'SYSTEM USER', and that's because the 'Administrator' has not the full control of the system.

[+] So, Let's Start:

1- Open Command Prompt

<<let's say now the time is 1:15 PM, and notice it uses 24 hour system>>

2- Type in "at 13:16 /interactive cmd.exe "

3- Then, end current "explorer.exe", by opening Task Manager, choose "Processes" tab, and select "explorer.exe", and Click "End Processes"

4- When time comes the Command Prompt will appear with title "svchost.exe"

5- Type in "explorer.exe"

6- Then, Here you are, you are the System User ? .

Hacker Bedo,

Please leave a comment ?

Hypnosis - February 12, 2011, 1:50 pm

The benefits of becoming the "SYSTEM USER" are?

H4ck3r-B3d0 - February 12, 2011, 2:01 pm

The SYSTEM user is the most powerful user on your computer. It can go in ALL System folders while Administrators can't, and the SYSTEM user can do everything on the computer.

Reason: A control system doesn't make any options that can't be changed/modified/watched. The SYSTEM user is there for things that anyone else can't do!

montelray78 - February 12, 2011, 2:04 pm

Good stuff, I think some people will find this useful.

bedo.trojan - February 12, 2011, 2:23 pm

This is a a very Useful Tutorial, thanx for Sharing :D :)

Dani?I - February 12, 2011, 2:58 pm

Hmm, Is it possible to create a Batch file of this? Simply because my school pc has blocked cmd, notepad and loads of other stuff..

the_lol - February 12, 2011, 2:58 pm

Good tutorial. Good information for me to use someday.

RuleBreaker - February 12, 2011, 3:44 pm

System user can destroy computer Admin can't....

CrazyMental - February 12, 2011, 3:46 pm

Cool Guide , Thanks For Tut :D

the_lol - February 12, 2011, 3:51 pm

Also one question, do we become system user forever? Or does it reset after restart?

SIM-5561 - February 12, 2011, 4:03 pm

I think you guys are getting confused, an administrator account is the most powerful account on Windows permissions-wise. Not sure about this system user is you're all talking about

FoRePLayy. - February 12, 2011, 6:38 pm

You are wrong. System user is more powerful than a Admin account.

blazzored - February 12, 2011, 7:41 pm

first, the interactive command won't work without an admin account in the first place (IE useless in schools). This doesn't make you a system user, it just gives you system user abilities within the cmd prompt. It's not very useful because if you have admin rights on your computer you can do anything you want on that computer anyway.

fistoffurypowerman - February 13, 2011, 12:13 am

well only problem is that it does not work in windows 7, used to work on xp long time ago !

SIM-135152 - February 13, 2011, 1:04 am

good to know how to do it

but why ? what can I do with system user ?

H4ck3r-B3d0 - February 13, 2011, 2:30 am

(Feb 13, 2011 02:04 AM)worlddanger Wrote: [\[CITE\]](#) good to know how to do it

but why ? what can I do with system user ? Read the "Final" 's comment ... and My comment

KevinHouse - February 13, 2011, 3:37 am

C:\Users\Kevin>at 12:38 /interactive cmd.exe

Warning: Due to security enhancements, this task will run at the time expected but not interactively.

Use schtasks.exe utility if interactive task is required ('schtasks /?' for details).

Added a new job with job ID = 2

Not interactive?

You are Welcome ? ?

Sensitive - March 15, 2012, 1:21 pm

Thx it's interesting . But anybody have a tutorial how to become administrator from suer if it is with
password?

deaded38 - March 15, 2012, 1:47 pm

Wow, this might come in handy sometime. Thanks.

Golliath808 - March 23, 2012, 12:55 pm

old trick,doesn't work on LimitedUsers. Another trick was the StickyKeys but only if you have phisical
access on the PC

dreadlordn - March 23, 2012, 2:40 pm

This is cool. System user has all kind of privilage on pc's. Good to learn that.

mpwn - March 23, 2012, 5:07 pm

for windows 7 use pstools (psexec -i -s explorer)

Super Lemon Haze - March 23, 2012, 5:11 pm

Nice. I'm gonna try this to destroy all the computers at my school :p (joking...)

4Y4T3M - March 23, 2012, 6:07 pm

Well written tutorial.

And Great Share!

itsbeeten - March 23, 2012, 6:29 pm

Haha, im gonna try this. One of the things been looking for

Alissa - April 30, 2012, 2:06 pm

It will be useful in the dormitory :DD

ethical_hackr - April 30, 2012, 2:53 pm

Does anyone know a way to get to the command prompt on a shared/networked computer with a limited account (eg. school/library)? If so, this would be good to use..
