Thread: DarkComet connection shows only in socket

sonikshot - *July 19, 2015, 10:11 am*

Hello! I have port forwarded everything correctly, i checked port on canyouseeme.org and it works well. When i infect myself with the rat, it shows at "estabilished" in socket, but nothing in connections. Could you help me please?
I'm using 5.3.1. Thanks in advance

Is your dns working or the IP you filled in?
Is your darkcomet listening to any ports?
Do you have the same password for your server & client?
Watch a darkcomet tuturial and try it again if you can't solve the problem.

the wolf of blockchain - *July 19, 2015, 12:46 pm*

might be a port problem. Check on canyouseeme.com

sonikshot - *July 20, 2015, 2:23 am*

Everything is ok, dns working, canyouseeme says syccess, i did everything correctly. This isn't the first time i use darkcomet , but i don't know what to do. In socket section it says listening to port 200 and connection estabilished to__ port 200
Anyway, it doesn't show up in my connections list. I don't have a password for the rat

You must type in network settings 127.0.0.1

Spadak14 - *November 1, 2015, 11:32 am*

I have the same problem and i dont know how to fix it :/

DamienVC - *November 1, 2015, 11:50 am*

cough stop using DarkComet?
It has unpatched exploits & vulnerabilties
Switch to Babylon

SilverNET - *November 1, 2015, 2:33 pm*

Try another port besides 200. Maybe something between 20000 - 52000
