Thread: [\[TuT\]How to crack with the help of Apex](#)

SkyWalker™ - February 16, 2011, 2:32 am

Hello all. In this tut I shall show you how to crack using Apex cracker.

Required tools:

Apex

Proxy leecher v6.5

Proxy checker

Athena II

Profile It v1.6

First download the required tools

Code <https://hackforums.net/showthread.php?tid=1064297>

Lets start:

First download the required tools

First run proxy leech 6.5 then click start when you after leeching 200 or more then 200 proxies in proxy leecher it will be shown finished.You need to use proxies because some sites ban IP that attempts to login for several times.

After you have leeched proxies now save it in a text documment or wordfile.

Now,Run proxy checker load proxies to the checker from the file you saved the leeched proxies.When the checking is finished save the valid proxies.

Next step is leeching combo list: You can leech combos with the help of Athena.

After leeching enough combos,stop and close Athena.Leeched combos are then automatically saved as combo.text.

Now you have wordlist and proxylist.

It is time to get on cracking.

Run Apex load userlist-passlist.I think it is better if your going to use combo.Go to password option -> check user : pass format.Now, to cracking lists and load the combo as userlist.

Now go to site options and select the site

Now after you select site a massage box pop-up that proxy required.As many sites ban single IP that attempts to login for a several time.Load proxies.

Now let Apex handle the job.Apex will be attempting to login with the loaded combo one by one, when a account is cracked.It will be showed up on the left.Save the cracked account in user - pass format.

Use checkers to check the accounts that you crack or use Profile it to check the accounts.

That is all now you have learn to crack with Apex.

Enjoy guys!!!!?
Don`t forget to comment.

is this just to crack accounts on websites?
to deface them?

SkyWalker™ - *February 16, 2011, 2:40 am*

just to crack accounts on a site.
