Thread: [?Release? IP Stalker \[Get Latitude + Longitude\]](#)

Marketplace - February 16, 2011, 8:44 pm

I made this and it uses WebClient. If the IP information is false, then it's not my fault. It's the provider which I used <http://who.is/whois-ip>. I decided not to do videos because it's just useless in these simple programs.

The only way you will get the real address of the person assigned to the IP is if they register with their ISP/are their own ISP. This will only find the companies address.

PURP - February 16, 2011, 9:12 pm

I live in Virginia and I put in my IP and this is what came up...

Spoiler [\(Click to View\)](#)

I would suggest using a different website that is more accurate. Like this one

<http://www.whatsmyip.org/iplocation/>
