Thread: [\[iSearch\] RAT Setup - Stealer Setup - Keylogger Setup - Booter Setup - IRC Setup](#)

Synurgy - February 18, 2011, 1:28 am

iSearch Setups

If you will notice, a lot of new users have trouble setting up many of the tools Hackforums users have to offer.

Not only do these new users have trouble setting up these tools, but they also have trouble learning how to use the "Search" function.

I have decided to make this thread to help those users out a bit, just to make it that much easier for them.

By making this thread, this should cut down on new users making the same "How do I setup ***" threads.

To you new members... All of us have been down that same road as well. Maybe this thread will help you on your journey.

You might to extend your list of keyloggers, other than that good share. Should be useful for newbies.

Thanks, but the links don't show a hackforums link. ?

Post the actual hackforums links that pertain to the types of setups I listed and I will add them. ?

I don't understand one thing. All this software is detected either by clamav. Why then all ask for them?

however good job, a use a lot of them before i start write myself :D

If they are detected, you can easily crypt it.
