Thread: [\[TuT\] KonBoot & What Can You Do With It \[TuT\]](#)

De?ter - February 19, 2011, 8:12 am

There are a few tutorials i saw around about Kon Boot but they are mostly copy / paste from the official site and almost every one is at least 2 years old. This is mostly for new users which probably never even heard about this great tool.

Anyway, Kon Boot is a little tool which lets you enter any comp account without knowing or changing their passwords. What it does is changing the kernel on the fly and lets you enter any account with any password.

Ok, now i will tell you how to use it, whitehat and blackhat.

We can use it:

1. If you forgot a password on your computer
2. If somebody changed it and now u dont have access to it
3. If you want to check whats on the comp without anybody knowing you were there
4. If you want to change the pass

First, you need to download Kon Boot from this site:

<http://www.piotrbania.com/all/kon-boot/>

Now you have to burn it to a cd, or USB (which i prefer, i dont deal with Cd`s anymore) and make it bootable.

[Search Google](#) how to do that.

When u have everything set up, u need to have a victim, like some school comp, or whatever u will use it for. This is for windows now.

Only thing u need to setup on victims comp is in BIOS, u have to set boot priority so the first boot will be your USB / CD.

Login to the admin account, you can put any pass and you will be in. Now when you are in, you can do whatever you want.

Open cmd and write this:

Code net user

It will list all the users on the computer. Lets say there are 3 users:

Administrator User1 Guest

Now, if you want to change admin password to 123456, in cmd type:

Code net user Administrator 123456

It doesnt matter what was the pass, now its changed to 123456. You can do the same with User1

or whatever.

Next thing u can do is add a user, like user2. Now type:

Code net user User2 /add

To delete User1 or User2, type:

Code net user User1 /del

You can find more cmd commands here on hackforums, but i think i made my point.

If you dont change anything, nobody will even know you were there.

Rate the thread if you like it, and I know most newbies will.

Thanks very much

will try this :D

Fo0xy.One - February 19, 2011, 9:55 am

I have never heard about the Too "Kon-Boot" but it seems to be pretty nice. I will definatively try this.

Thanks for posting this great Tutorial!

De?ter - February 19, 2011, 10:31 am

Thanks guys, i was suspicious about this program till i tried it, it works great...

ThatsHarsh - February 19, 2011, 10:43 am

Wow, sounds brilliant! Definetely downloading this. Just need to find out how to make my usb drive bootable... :p

De?ter - February 19, 2011, 10:56 am

Here is the link if you dont want to search but instead W7 you will put Konboot image.

3xtreme - February 19, 2011, 10:58 am

Very nice, thank you for the tut sir

macklove74232 - February 19, 2011, 11:36 am

will it work on windows XP too ?

De?ter - February 19, 2011, 11:54 am

Yes it works on every version of windows

jeffmama1111 - February 19, 2011, 1:08 pm

its great becuase it doesnt remove the password like all the other programs do but instead lets you type in any password to log in and once you finish take the cd/usb out which will then allow only the original password to work. GREAT SOFTWARE!

Zeldak - February 19, 2011, 1:43 pm

Thanks for the guide!

I dont have KonBoot but im going to download it definetly

SIM-135152 - February 19, 2011, 3:38 pm

I looks great I download it

and it's to small to download better the others

but i haven't tried it yet

iamacoolguy1234 - February 19, 2011, 5:27 pm

Thanks for this brophessinokibroski.

bcom_bad - February 20, 2011, 1:49 am

amazing admin will never know what happened

De?ter - February 20, 2011, 6:14 am

Yes, thats why is it so good...

lysergicacid3 - February 20, 2011, 12:35 pm

can anybody get a hold of konboot 1.1 it works with 64bit windows and is more compatible with more computers I use this disk a lot at work thx

bangsolo - February 20, 2011, 1:58 pm

Thank you its very helpfull.

Idc - February 20, 2011, 5:11 pm

I Knew this already, but it's still a great tut

[i]NS[i]DE - February 21, 2011, 3:41 am

Thx for the nice tuts !!!

seskanda - February 24, 2011, 1:32 am

I do NOT think this works with Windows Vista or 7 home editions, for some reason..

doridroboy - February 24, 2011, 3:02 am

looks great..i will try his

eXtazie - February 24, 2011, 3:49 am

Ophcrack search what is the password of all the users

xarisis - February 24, 2011, 11:37 am

Yeah, just tested on windows 7 32-bit and I got the blue death screen and a reboot.

yashsakhlecha - March 3, 2011, 10:50 am

hey cool.....thanx a lot...very helpful

SIM-135152 - March 3, 2011, 11:21 am

Thanks,It looks great and well explained.

I going to use it soon.

Autorun.inf - March 3, 2011, 12:51 pm

How to make usb bootable?

Harpoon - March 3, 2011, 1:36 pm

I recently FOUND a 2GB flash drive at school, I wiped it clean, and now gonna format it with this <3

Scooby Doo. - March 3, 2011, 1:46 pm

Wow, thanks alot man! I'd rep you if i could, this will be VERY useful =)

Reactive - March 3, 2011, 3:14 pm

Whoever wrote KONBOOT needs a medal. i have been using this for ages and i think the best bit of it is the fact that it works on most major OS's (NOT JUST WINDOWS)

RaZa - March 3, 2011, 3:40 pm

This is similar to Offline NT Password Editor except it doesnt clear the password, so better! :)

I will add it to my list of CD Booters :)

WICKSEH - March 3, 2011, 3:46 pm

Thanks for this! My friend has needed to get into his admin account for a while now, i'll re-direct him to this. :3

??h™ - March 3, 2011, 3:47 pm

This is cool and kind of like ophcrack. I'm downloading. :)

De?ter - March 4, 2011, 3:33 am

Thanks guys, glad you like it, enjoy

c0rv0 - March 4, 2011, 4:56 am

I needed this yesterday...a friend of mine was locked out of his admin account.
Downloaded kon-boot,changed settings in bios and bam...job's done!
Nice tool...

scyther123 - March 4, 2011, 7:03 am

really amazing !!! thanks for the tut :)

Lunatic - March 4, 2011, 7:10 am

Will this also work if the computer on your school use a different program to log in on windows?

dantheman - March 4, 2011, 1:14 pm

Use kon-boot 1.1 for use with windows 7 32 and 64 bit

uglykidjoes - March 4, 2011, 2:04 pm

When ure done do you have to change the boot option back to boot normally . Nice tut also never nee about it my self

Tunchi - March 4, 2011, 3:36 pm

or you can use it if you jackd some mother fuckers computer out there car or house xD

pallindrome - March 4, 2011, 6:29 pm

A very useful and great tutorial buddy , keep it up !

xTru - July 1, 2011, 8:57 am

It is telling me that the Operatig System is not found when I try to boot from my USB storage and I

did everything in the USB tut. Dell laptop, win7
Thanks in advance.

zzyx - July 1, 2011, 9:03 am

I did this earlier, but kon boot just can't get in to my PC, it takes way to long, so i just shutted it down..

help me, pm me!

Mogle - July 3, 2011, 7:36 am

Glad to see you put this up; I was just thinking of posting one just like this but thought "hey, someone else must've thought of sharing this...".

A quick Search, and bam. :P

Great tutorial on a great tool.
