Thread: [Darkcomet Firewall disabled](#)

jeave - February 20, 2011, 9:12 am

Hey,i recently started ratting,but at my first server,i ticked:Disable Firewall

I just wanted to test if it works with this options,but now my firewall cant open,it just said it cant load the Snap-In Windows firewall,i should restart,after restart,i got the same error

I already googled this error but nothing

I already googled this error but nothing1) I suggest you to disable your server first?. Then would you please post a image of the error.

2) Download [Auslogics BoostSpeed](#) and do a full scan for errors.

NOTE: after running the installation file, DO NOT run the program until you copy that "aushelper.dll" into the directory of Auslogic. The "readme.txt" will explain what i mean.

OPTIONS YOU HAVE!

- 1) Repair your windows firewall
- 2) Use another firewall (like comodo)
- 3) Act like nothing happened (?)

jeave - February 20, 2011, 9:29 am

one problem

its in german

[\[IMG\]http://img121.imageshack.us/img121/7170/unbenannttwr.jpg\[/IMG\]](#)

Uploaded with [ImageShack.us](#)

so when i will open the part of the firewall,where i can open ports,give a programm rights ... this appears

Saki~chan - February 20, 2011, 9:38 am

Download [Auslogics BoostSpeed](#) and do a full scan for errors.

NOTE: after running the installation file, DO NOT run the program until you copy that "aushelper.dll" into the directory of Auslogic. The "readme.txt" will explain what i mean.

~~

Even though its german the error code is still universal

alphatangocharlie - February 20, 2011, 9:42 am

I too had this problem with darkcomet. I did not install my own server on my PC, but my windows firewall still ended up disabled after a few runs of the darkcomet software. I had to use system restore to fix it, and moved to cybergate, which seems to be a better rat anyway.

I wonder is the download backdoored, or does the darkcomet program have an error that causes the windows firewall the be (permenantly) disabled?

NewbieHacka - February 20, 2011, 9:48 am

for beginners honestly i suggest using cybergate its alot easier to navigate with and in my opinion alot better overall.

jkyu9 - February 20, 2011, 9:50 am

I've been using DC for a while and I have never gotten this error
I guess I'm just a lucky one

jeave - February 20, 2011, 10:02 am

So here the results:

Saki~chan - February 20, 2011, 10:05 am

Press repair now....then restart your system and see if that helped.

jeave - February 20, 2011, 10:31 am

still the same error
too short

Saki~chan - February 20, 2011, 7:55 pm

(Feb 20, 2011 11:31 AM)jeave Wrote: [\[CITE\]](#) still the same error
too short

After doing some more research. i found something that might help.

Code 1. Open a command prompt window. (alternatively you can press window key + r then type cmd).

2. On the command prompt type "netsh firewall reset".

C:\ netsh firewall reset

Based on the image you provided, i take it you have windows 7?

01L 5P1LL - February 20, 2011, 10:28 pm

I got the same problem with this Rat dark comet im gunna try to fix it

DenialService - November 24, 2011, 9:57 am

did you find fix because after i used dark comet all ports are blocked and i cannot turn anymore firewall

Hreidmar - November 24, 2011, 4:11 pm

Everybody who has problem with firewall please vist <http://www.darkcomet-rat.com/>
and download FixComet v1.0

in many cases it fixes things like that, if not i know there was a tutorial recently on how to fix this error so you can try and Search it on HF.

Good Luck. =)

DenialService - November 24, 2011, 4:41 pm

why you didnt give us a link, be from the brothers not from the haters we are kinda noobs ,
I tried 10 times maybe fix comet it doesnt work for me

?Apocalypse - November 24, 2011, 4:58 pm

Try here <https://hackforums.net/showthread.php?tid=933452&page=7>

badlyfar - November 24, 2011, 4:59 pm

Go to Start or run-> Type Services -> Then windows firewall -> Enable

Predator_Crack - November 24, 2011, 5:25 pm

Even if you simply use the service enabling method or fix comet maybe it doesn't come back again. As long as we talk about an unencrypted server try to follow the procedure here:

<https://hackforums.net/showthread.php?tid=933452&pid=17528637#pid17528637>

The above 2 guys are correct. Follow them and if it fails, then simply do the scan i say in my post.
