~xXx~ - July 24, 2009, 10:04 am

See anyones desktop,Turkojan4Xclusive 2008 ,,Control any PC Remotely,(rare to find) ~

This is my own upload for Everyone(So dont worry,,I tried this,,and i saw victims webcam,,desktop activity,,and all features in turkojan worked for me).

Turkojan is a great RAT.I m giving your the GOLD version of Turkojan.You can download trial at <http://www.turkojan.com/eng/yukle.php> but it dont have the invisible mode.Im giving you the full control mode enabled version.(The Private Version).Please read all the things i say here,,else it would be difficult.

Features...

Reverse Connection
Remote Desktop(very fast) Webcam Streaming(very fast)
Audio Streaming Thumbnail viewer
Remote passwords MSN Sniffer
Remote Shell Web-Site Blocking
Chat with server Send fake messages
Advanced file manager Zipping files&folders
Find files Change remote screen resolution
Mouse manager Information about remote computer
Clipboard manager IE options
Running Process Service Manager
Keyboard Manager Online keylogger
Offline keylogger Fun Menu
Registry manager Invisible in Searching Files/Regedit/Msconfig
Small Server (100kb)

Whats New :

Remote Desktop feature added.You can view remote screen and control it via your keyboard and mouse.

Now you can record video from remote webcam. Audio streaming feature added.

Now you don't need to download images from remote computer,you can view them with thumbnail manager.

You can get MSN logs with MSN Sniffer.

You can block harmful web-pages on remote computer.

You can manage remote computer with ms-dos commands.(Remote Shell)

New functions added for server secrecy

-Now it is harder to delete server

-Server can't be show in registry,searching files,msconfig,etc.

-Server can't be shown in ctrl+alt+del menu[Vista/Xp/95/98/ME].

-Server prevents system restoring.It deletes all system restore points.

Server size is %60 smaller now.

Connection bug fixed Now server can't be dedected by any anti-virus software,

but i think it will be dedected soon.

Some changes were made in Client appearance
. Now advanced keylogger can capture clipboard chngements.

You can install any file to remote computer from internet via Remote Downloader.
Now you can get more information about remote computer.

You can learn installed softwares on remote computer.
Help mode added.So you can create visible servers

Also Invisible mode enabled.

All things you need to know can be found here <http://www.turkojan.com/eng/dokumanlar.htm>

Go there and see No-IP tutorial,,You have to get a static IP,,thats why you go there and create a static IP..It will be looks like xxxxxx.no-ip.biz or something like that.you have to put it in server editor in turkojan client

If you created a No-IP account,,You dont need to go to DynDNS.com.You just need one of them.

If you dont know about port forwarding 4 your router,Go to <http://www.portforward.com/english/r...outerindex.htm> and look bottom for your router name and click it.Then in the page you came by clicking your router name go to bottom of page you will see a list of games and apps.Just look for turkojan.And then click it you will have a complete tutorial on port forwarding for your router for turkojan

If you need more information dont bother,,Just search it in google.. IF you cant find what you need ask me,or ask a senior member.(hehhe also i dont know much,,but i will try my best coz this worked for me)

If you dont know how to use turkojan see "Turkojan Usage" in <http://www.turkojan.com/video/turkojaneng.htm>

If you dont know how to create a No-IP accout go here<http://www.turkojan.com/video/noipenglish.htm>.Please create only a No-IP account.No need of DynDNS.

Plz note:-

This is a trojan.So your antivirus will name this as a virus.But Dont worry client will not harm your PC.Dont open the server you created in your PC.

Always ZIP the server you made.And then send.

After you send the server to victim first You have Disable all firewalls and antivirus guards,,after that run No-IP Duc software.after running it then go to turkojan client and then click start 4 searching victim.Then connect.

Try it and post a reply.....

(If u like my Post then please +rep me ?)

? ? ?

SpaghettiKing - July 24, 2009, 11:06 am

That is pretty nice.

Honestly I am a little skeptical to download..

Downloading it but question..

do you need the persons ip?

or do you just need to send the server and then turkojan will tell you it got someone?

ubbelol - July 24, 2009, 11:10 am

No, do NOT download!

This looks VERY much like a scam/infection. Low posts, low reps, very bad english..

And you control PCs remotely with regular turkojan, i would NOT download this.

KurRyM1x3r™ - July 24, 2009, 11:13 am

Same Might As Well Use the Turkojan v4 GOLD in Divine Flame's Tutorial about turkojan

Sud0x3 - July 24, 2009, 11:53 am

Do not trust this guy half his threads are leeched, might be trying to get rep up so he can infect users.

You little shit you leeched this from root security forums, copy and paste 3rd time ive caught you.

HA HA(LOLOL)

Soldier of Fortune - July 24, 2009, 12:42 pm

Thread starter has been warned for leeching. At least give credits!

Some1 give regular proofs before reporting a thread?

Chpage07 - July 24, 2009, 2:57 pm

Lame post is LAME!!! ?
