Thread: [\[Public Free\] Bellum Website DDOS Tool \[Public Free\]](#)

Yingeh - February 22, 2011, 9:12 am

[Bellum](#)

What types of attacks does this tool launch?

This tool enables users to launch a wide variety of attacks that are subject to daily updates and improvements. The "standard" attack is a slowloris attack; underneath it are several other types that the user may choose. The "stealth" option usually works well for most websites, however this among other types of attacks will not work at all on well-secured sites.

What does this tool do?

This tool allows users to launch attacks on website without any additional software or technical knowledge.

When will more attacks be added?

Here at bellum, we do not set long term deadlines for adding new attacks. Rather, we find it is more effective to research and test out new attacks daily. You can see that our selections of attacks are frequently subject to change each day. Once implemented, an attack is immediately available for use. If we find that the attack guarantees a low success rate, we quickly will remove it from our server. It is pointless to retain attacks that: a) do not work efficiently; or b) are easily blocked.

Can i submit an attack to add?

Users can submit or request an attack to be added using the contact page listed on the left menu sidebar. If a script is provided, it will be subject to review and rigorous testing. There is no guarantee we will implement a submitted attack.

Can i be traced from launching attacks on here?

No. At bellum, we never store logs on our main attack servers. We primarily use sub-servers to launch attacks, so when they are shut down we can create new ones within hours. There is no risk of being traced.

How does the script work?

The bellum main script sends commands to its sub-server(s). From there, each sub server launches the attack for a total of 10 to 15 minutes. This limitation allows everyone to use the service.

Are there any limits on attacks?

We limit one attack per domain at a given time. However, we do not limit the total amount of attacks a user can launch, unless a user is found to be abusing the service and taking up all attack spaces, upon which they will be banned for service abuse. These limitations allow everyone to use the service.

Why hasn't bellum been shutdown?

Our main script does not violate our hosts' TOS (terms of service). Our sub-servers, on the other hand, violate the TOS of most hosts, which explains why each are shut down one to two weeks after creation. As soon as a sub server is shutdown we promptly create a new one. However, this process can be tedious after a while, which is why we tend to keep the locations of our sub-servers private to avoid being reported.

Can attacks be blocked after so many attacks to same domain?

Some websites quickly block an attacking IP if it is shown to attack frequently in a short span of time. However, our attacking IPs change daily, so even if the target website blocks the attacking IP one day, it will not be blocked the next. If an attack drops a website, but the IP gets banned, and you would like to have the attacking server's IP changed rather than waiting a day or two, use the contact form to request an IP flush. Within two minutes, the attack will begin to work.

Who made this script?

RaidX is the original creator of this script. Many had requested that he make a safe, easy-to-use alternative to running executable attack programs.

Can i get hold of this script to host myself?

Absolutely not. This took a fairly long amount of time to create. We will not give out the script just to have someone else take credit for it or sell it.

Can i attack domains with XBOX attack?

NO, using xbox attack for attacking domains will result in you being banned for abuse of service this is ment for booting xbox 360 hosts offline not websites.

Can i donate to the project via paypal?

Currently, we do not have a paypal that users can donate to. If you absolutely want to donate money to the project, we will accept Western Union. Send us an email and we will work something out.

Visit now. [Bellum . tk](http://Bellum.tk)

Cerebro - February 22, 2011, 9:13 am

Lol, 12 posts seems suspicious.

James Wilson M.D - February 22, 2011, 9:16 am

And the domain is a .tk which is fairly awful and indicates you do not have cash and are not serious about it.

Yingeh - February 22, 2011, 9:41 am

(Feb 22, 2011 10:13 AM)???? Wrote: [\[CITE\]](#) Lol, 12 posts seems suspicious.What is so suspicious about the website? Its not like i've added a drive by or anything to it, or put a virus whats with you people, always judging a book by its cover.

(Feb 22, 2011 10:16 AM)Alex4921 Wrote: [\[CITE\]](#) And the domain is a .tk which is fairly awful and indicates you do not have cash and are not serious about it.Look man its not my website its my mates, stop criticizing the domain name no one really cares as long as it works.

Gee, thanks for the positive comments.

Feel No Pain - February 22, 2011, 9:44 am

Fail, it doesn't work, and it doesn't even let you put in the port.

Yingeh - February 22, 2011, 9:48 am

(Feb 22, 2011 10:44 AM)Feel No Pain Wrote: [\[CITE\]](#) Fail, it doesn't work, and it doesn't even let you put in the port.It does work, there can only be 3 attacks at a time, its a free service what do you expect :L

Feel No Pain - February 22, 2011, 9:50 am

(Feb 22, 2011 10:48 AM)l33tYing Wrote: [\[CITE\]](#) It does work, there can only be 3 attacks at a time, its a free service what do you expect :L

How is it going to attack, if it doesn't let you put in the Port of the Ip?

shanker - February 22, 2011, 9:52 am

(Feb 22, 2011 10:50 AM)Feel No Pain Wrote: [\[CITE\]](#) How is it going to attack, if it doesn't let you put in the Port of the Ip?

It might port scan and attack on every open port(I highly doubt it) but possible

Yingeh - February 22, 2011, 9:55 am

(Feb 22, 2011 10:52 AM)shanker Wrote: [\[CITE\]](#) It might port scan and attack on every open port(I highly doubt it) but possible

Bingo, it does, but you can see you have a selection of categories - Standard - Stealth, & Xbox Live.

[QUOTE='shanker' pid='10039138' dateline='1298397140']

zer0day - February 22, 2011, 9:58 am

Maybe a screenshot of the site would more satisfy everyone to check it out.

The Invoker - February 22, 2011, 9:59 am

Post a video ddosing an IP or site and making it going down.

+ you should specify the time of the ddos attack that will be made.

Yingeh - February 22, 2011, 10:02 am

Heres your screeny.

[img]http://i53.[censored].com/35i264k.png[/img]

3p!x - February 22, 2011, 10:04 am

Looks Suspicious to me, I've seen a lot of java's with the domain .tk

Yingeh - February 22, 2011, 10:05 am

(Feb 22, 2011 11:04 AM)Sil9ntDr9amz Wrote: [\[CITE\]](#) Looks Suspicious to me, I've seen a lot of java's with the domain .tkYeah, like I'd really wanna infect HF members, drama queen..much

3p!x - February 22, 2011, 10:13 am

(Feb 22, 2011 11:05 AM)l33tYing Wrote: [\[CITE\]](#) Yeah, like I'd really wanna infect HF members, drama queen..much

Just stating my opinion, and obviously opinions can be wrong... Ive seen it a lot around here especially with members with lower post count, hints a false,fake account. If its not a java,virus, then you have nothing to bitch about

The Invoker - February 22, 2011, 10:19 am

Just post a video with valid proof of the ddos.

1v1 - February 22, 2011, 10:23 am

looks good, but cant test right now since 3 other are running it.

Alison Wonderland - February 22, 2011, 10:30 am

The page is not infected as far as I can see.
Calm down guys.

Looks pretty good IMO. How many shells?

Maxie - February 22, 2011, 10:35 am

(Feb 22, 2011 10:16 AM)Alex4921 Wrote: [\[CITE\]](#) And the domain is a .tk which is fairly awful and indicates you do not have cash and are not serious about it.It's a paid .tk though. Seems legit.

Yingeh - February 22, 2011, 10:36 am

Calm down guys.

Looks pretty good IMO. How many shells?Don't know man, i'm just promoting this website its my mates, but i'm pretty sure it has alot, everytime i've tried it i was able to take down the website ?

Chaprnks - February 22, 2011, 4:08 pm

took down a small dedicated server website

DarrenG - February 22, 2011, 4:48 pm

Looks extremely suspicious to me, First and last off it's a .tk, In my experience like 5% of .tk downloads are legit, If you post a screenshot i may download.

RXRaidX - February 23, 2011, 10:26 am

to answer few questions ...

You can't define port as its mainly aimed at hitting websites which should normally run on port 80 also xbox attack hits the port which is best to take down xbox 360 hosts.

I use .tk domain as its free but point it to my own host and attacks launched on sub servers
I tried a main .com domain but people manage to report to registra's to quick and get domain invalidated

.tk seems to last alot longer... Although noted i may get a .com for it soon just don't forget it started off as a small project nothing good then i just improved it over time.. it was never intended to stay

The website does not use frames or anything... You can scan it as much as you feel like...

Plus you do NOT download a thing you enter domain to hit and hit submit... there is no software to download

that was my reason for making it as many people give downloads to virus'd software so online tool makes it safer for all users.

its a free tool and does what it says on tin most websites are taken down with it ..

Yeah i limit attacks to 3 attacks mainly because of server resources per attack
I am working on improving the limits soon..

IF anyone has suggestions for domain extension to use i will be happy to take them under consideration.

just so people know .tk doesn't mean its a bad site its a domain extension nothing more nothing less its not using

.tk's frames to load site its pointed directly to my nameservers so works just as good as a .com domain.

Appreciate all the criticizing it but quit judging a book by its cover.

At first users was able to define ports but was abused too much people trying to hit other people with attacks which are aimed at websites not people.

Also attack types change all the time i try to add more when i can, But mainly all i can say is NAME ONE SINGLE SITE

that offers online attacks, there are many tools offered by different places but all virus'd name a site that does it online for you

using dedicated sub server resources rather than you own all for FREE... Its a good project!

Hopsin - February 24, 2011, 9:34 am

.tk domain? Why you just don't post the download link here? It would be much easier,thank you.

RXRaidX - February 24, 2011, 10:20 am

There is no download for anything you idiots...

Its an online tool, Throw up a .com domain with a online ddosor See how long it takes before registra closes the domain down...

.tk, .com Makes no difference its not running tk iframes its pointed to my nameservers so it runs like any other domain.

Why do such noobs have to post stupid comments without knowing anything themself..

.tk,.co.cc, .cz.cc all the same they all run good if not used as framing sites but used directly pointed at host..

Its a domain extension like any other domain extension..

You can tell when retards are present when they SaY post download here..

Err that is why i made online tool as Downloading software sucks its best using an online tool Stop criticizing it without actually seeing it, you all judge books by its cover but once you use it then email me saying oh give me private version please..

SO FUCKING annoying

If people keep ripping on the domain i will pull the whole project offline and scrap it .

I hate noob faggots who know nothing and just like to guess.

TO ALL USERS ITS NOT DOWNLOAD SOFTWARE IDIOTS ITS AN ONLINE WEBSITE TO LAUNCH ATTACKS ONLINE

REQUIRES DOWNLOADING NOTHING AT ALL LEARN ENGLISH SO YOU CAN READ BEFORE BEING STUPID AND POSTING.

nifymods - March 16, 2011, 10:35 am

This website works . Not very effective on higher secured sites but it works .

xSk0rp - March 16, 2011, 12:24 pm

Good tutorial ! But not enought...

__Dr. Jeremy__ - March 16, 2011, 12:28 pm

I don't see how this is a DDOS tool, other than a DOS tool. Either way I'm trying it on a very small website. We'll see if it actually works.

It seems to be working folks. I just tried it, the site is down. So, I vouch for it. It did legitimately take down a small website.

Yingeh - March 16, 2011, 3:02 pm

(Mar 16, 2011 12:24 PM)xSk0rp Wrote: [\[CITE\]](#) Good tutorial ! But not enought...

Stupid noob this isn't a tutorial, maybe if you read the damn thread you would know what it was.

darnjester - March 16, 2011, 3:54 pm

This is awesome.

Thanks.

Ashley0011 - April 8, 2011, 11:39 am

I was banned after only one DoS... I'd like to request an unban... -___-"

RXRaidX - April 12, 2011, 6:25 pm

Use contact form, Bans are applied to people who do multipul attacks on same domain within ten minutes

or for failing to read to rules proper..

Check back now we have a login system

and we moved domain to <http://www.bellum.org.uk/>

we also have domain <http://slowloris.pl> - for irony

Use contact form supply your IP and it will be looked into ..

Bans are not handed out lightly but as we cannot issue warns to users we just ban when abuse is found.

x-iPleasuRE - April 15, 2011, 10:05 am

Site doesn't work for me, but people have said that it works fine for them :/

maxvd - April 15, 2011, 11:33 am

Check out this website: <http://www.my360radio.com/> - this is good to send to a friend for prank and/or a target.

Swish - April 16, 2011, 10:59 am

This is absolutely awesome! I have been taking down three websites with 100 and 1000 mbit/s connection so I can admit this works extremly well. The website is down atm for maintenance but I hope it will be up soon so I can do some more attacks. It's not any suspicious with this website. You should go and check it out yourself! It's awesome!

Tibit - April 16, 2011, 12:09 pm

Any idea when it will be back up? If it works for me I'll vouch.

"Sorry but the website you are trying to view is currently down for maintenance

There is no E.T.A but the maintenance is required to fix some php issues we are having

Please bear with us while these changes are made.

Check back later.."

Swish - April 16, 2011, 3:36 pm

(Apr 16, 2011 12:17 PM)sPliFFx Wrote: [\[CITE\]](#) Is this still "Safe" , and / Or still working?It is safe to use but the site is under maintenance so I guess you just have to wait...

RXRaidX - April 19, 2011, 5:55 am

Site was being repaired, All systems green

We have now a cleaner blue theme with a login system to prevent abuse..

Registrations are open on very few days ..

Like today they are open due to abuse we open em on selective days
but do not disclose them days to prevent people coming who plan to abuse service
as its a free service we respect the users who come and obey the rules

SIM-747559 - April 19, 2011, 2:38 pm

works great for its purpose!! VOUCH!

Swish - April 19, 2011, 3:31 pm

Yes, this works great.

Just some info: It's possible to boot 3 times/day and the boots are 10 minutes long.

I think it uses slowloris so not all websites are vulnerable to hit.

]-[ack3r - April 20, 2011, 10:17 am

Bullshit trash site does not work. sorry if im flaming but it's true

Hate Sleeping Alone - April 20, 2011, 10:49 am

took down a small dedicated server website

aagibcheat - April 20, 2011, 11:02 am

Works!

I tried it on a small webpage.

maxtravaz - April 20, 2011, 12:17 pm

Tried it on some shitty website,

Worked good :)

Thanks for releasing this to the public

Skid - April 20, 2011, 12:22 pm

Nice work bro, i've downed 2 sites over now ;D

RXRaidX - April 23, 2011, 5:25 am

It does work well.

Just not for big sites that people keep trying to hit like facebook,google

Just seems pointless even wasting an attack attempt on such big sites.

alboXblood - April 23, 2011, 8:05 am

enable registrations plz i wanna test!

also to all the FAGGOTS saying .tk is suspicious and whatnot check on the bottom of the page they have a .org.uk domain which you purchase bellum.org.uk

hlidar - April 23, 2011, 11:12 am

I would like to register. ples enable registrations

NightsSiners - April 23, 2011, 2:13 pm

is the site even up right now?

RXRaidX - May 10, 2011, 7:21 am

Yes website is up and fine, And now new system is live
Registrations are back LIVE!

People need to read rules though or they will be banned
and if major abuse is found registrations will go back disabled for some time..

Respect the free service, And yeah we are running .org.uk domain
Domains to use Is

bellum.tk
slowloris.pl
bellum.org.uk

All them domains will point to bellum.org.uk

thebond99 - October 24, 2012, 11:21 am

This site not work for me site MSG replying

http://searchremagnified.com/?dn=BELLUM.TK&pid=7POX57615&_id=1351102860

Badside416 - October 24, 2012, 3:13 pm

omg gravediggers these days, this was last year
