Thread: [embed ocx in vb6 exe](#)

trance.geek420 - July 25, 2009, 7:03 am

does anyone know how to embed an ocx file in a vb6 application, i would rather not do it with an sfx archive or iexpress, with C# i just added the dll/ocx as a resource and extracted it in the main function, but vb6 doesn't seem to know what i'm talking about...

If you have the source of the vb6 app.

Open the resource editor and put in the OCX

Then add a Sub Main, and drop the OCX to where ever and regsrv it.

ok, that's what minidos does, i tried it with my botnet, but it didn't seem to work (i put a msgbox in the sub main), but then again the sub main was in a module so that may be why (i suck at vb6, i'm a vb.net/C#.net programmer :P)
