Thread: Crack hash? Which hash is this?

burdeloso - *October 11, 2016, 4:13 am*

Hi guys,
I have hash:
7a9c034f50ff798dad121bb2f0ee2e040b6647f8f99213103e4ec9386f75b83d
And something named code:
85087

Which hash is this? And its possible to crack it?

Best regards mates :)

Mr. Robot - *October 11, 2016, 4:15 am*

What database is it from mate? Or private.

tobuscus5001 - *October 11, 2016, 4:24 am*

This hash is double the lengt as MD5. It CAN be double MD5 encoded. And the "code" is called a salt.
So it prob is MD5$hash.$salt with double MD5. Not sure though!

burdeloso - *October 11, 2016, 4:31 am*

It's from new database, I cant contact via PM because of 25post limit

tobuscus5001 - *October 11, 2016, 4:33 am*

You can identify the hash by using Kali Linux and opening a terminal and typing "hash-identifier"

tobuscus5001 - *October 11, 2016, 5:46 am*

I will run hashcat on your hash. I will first try SHA-256.

Alright, it can probably be sha256($pass.$salt).
For pass: 7a9c034f50ff798dad121bb2f0ee2e040b6647f8f99213103e4ec9386f75b83d
Salt: 85087
