Thread: [The Thread of Loggers](#)

.Astro - February 24, 2011, 10:26 pm

Okay, so I'm tired of seeing these dumb ass skids like the user bulldogs making over 5 threads a day here because he can't figure you how to work a keylogger. I bet you anything, it's corrupted. Anyways, off that subject. So I decided to make this thread for idiots like him. I'll be showing a tutorial for some of them at some point in time.

The Index of Loggers

[x]Keylogging

[xx]How to FUD my server?

[xxx]Why isn't my server working?

[xxxx]Free Keyloggers

[x]Keylogger

Keylogger is a fairly simple process of what is called "hacking." Basically, a keylogger takes record of whatever your victim types or does on the infected PC and sends them to you via email or FTP access. That way, you can take their accounts, which to most people is "hacking." But we know it as keylogger.

[xx]How to FUD my server?

FUD = Fully Undetectable

Why is "FUD" a good thing? Well if you can find a crypter that is FUD then you can keep your victims logged, because their anti viruses won't go A-wire a scare them to death about a virus. You can achieve FUDness by using crypters. Most free crypters right now aren't FUD, but there are a lot of good paid crypters you should look into.

[xxx]Why isn't my server working?

Well a couple of reasons why your server doesn't work can beCorrupted. This can happen by crypter. Sometimes the crypter messes up the server and ends up corrupting it so it doesn't send logs.

Is your server FUD? As I mentioned before, most victims will get scared and delete that right off their systems.

No executions. Are you sure that you victim has downloaded and executed your virus?

Blocked/Muted. Maybe your Email provider has blocked the email or muted the email that sends logs. Such as what happens in Gmail sometimes.

Those are the most common reason why you don't get your victims. Just because you get downloads, doesn't mean you get victims.

[xxxx]Free Keyloggers

Here's a list of a couple free loggers that I recommend to those who are looking for ones.

[Decay Logger](#)

[Grassy Knoll Keylogger](#)

[Grieve Logger V1.1](#)

[Kom Logger V1.1](#)

[EasyLogger 2.0 Public](#)

CrexLogger (Coming soon!)

bulldogs - February 24, 2011, 10:43 pm

ooh i am dedicated to this! i am honoured!

TeraxX - February 24, 2011, 10:45 pm

good tutorial, i know this loggers they are good.

Kom - February 24, 2011, 10:46 pm

Good to see something like this again lol - Hope skids can find it, bulldogs sure did.

Hope he learned something though. Prob not.

danidm - February 25, 2011, 3:34 am

good tutorial. Thanks for share.

awestom - February 25, 2011, 3:38 am

You didn't give any information about crypters that work with key loggers.

Bulldogs key loggers are probably corrupted due to the use of faulty/ineffective , you should post some links for us.

joshboii1992 - February 25, 2011, 4:55 am

Lets just hope them noobs actually look at it

.Astro - February 25, 2011, 10:10 pm

Seriously? Already pushed to the button of the section.

?Demon - February 25, 2011, 10:24 pm

I'll make a mega-thread on this.

Chris Versaci - February 25, 2011, 10:41 pm

Nice 8) What about XYZ keylogger?

.Astro - February 25, 2011, 10:42 pm

It's for free keyloggers, not paid. And plus, the free one is in the referral section because it's only shitcash.
