This RAT is coded by me in Delphi 2007.

It uses the skinpack ALMDEV of Skins.

I must admit the RAT looks pretty sick ;)

Not another SpyNet Based RAT. Bro Despite that i like the way it looks keeps changing it around do something nobody has done before. That's what people want to invest there money in.

L04DING - February 25, 2011, 9:18 am

This RAT is not based on SpyNet because it is coded in Delphi 2007 and not as Spynet in Delphi 7 and uses the Winsock and not Indy 9.

Not to lie the basis of this RAT is an old source of SS-Rat completely recoded.

Not another DarkSnake Product,

I bought DDoSer and I got terrible support from blackout.

What are you talking about?

I think you need glasses

OP clearly says : "This RAT is coded by me in Delphi 2007."

Hide the IPs on your RAT. Releasing IP is not allowed on this forum. (I'm just saying it before you get warned)

Anyways , the RAT looks pretty sick.
