Thread: GIF Signature?

Ace of Knaves - *February 2, 2017, 4:10 pm*
Hey all

Trying to use this as my sig:

Code [img]http://gifrific.com/wp-content/uploads/2012/04/funny-world-we-live-in.gif[/img]
It just comes up as the code

Any ideas?

Try uploading it to imgur or something better and then doing it.

J?son - *February 2, 2017, 4:11 pm*
your signature needs to be in HTTPS

Soulmate~?? - *February 2, 2017, 4:13 pm*
That site doesn't support https, try this. If you want to center it make sure it's "align=center" not "center=align" since I just made that mistake.

Code [align=center][img]https://imgur.com/TEpx5DL.gif[/img][/align]

Make sure to reupload to imgur or something too in case the host goes down

Thanks guys, got it working. Will close this thread. Thanks again for the help :)

EDIT: Nope not working lol. When I use HTTPS I get "File size too big". When I dont, it works in preview but not in threads...

It's not working for us, you are still on http so it's client sided.

SoulZeh - *February 2, 2017, 4:17 pm*
You gotta put https like someone said :P

J?son - *February 2, 2017, 4:19 pm*
Signature gifs can only 650x200 pixels and 500kb size.

Ace of Knaves - *February 2, 2017, 4:19 pm*

Got there. Used ezgif.com to make it a bit smaller. Thanks guys, NOW its working <3
