Thread: [How to make your copy of Windows XP Genuine without any CRACKS or KEYGENS](#)

Nestle* - February 28, 2011, 5:12 am

Hello this is not my personal Tutorial and i don't take Credit for this. I tried it more than 15 Computers and it worked 100%.

This is a guide on how to make your copy of Windows XP genuine without any cracks, keygens etc.

1. Click on "Start"
2. Click on "Run"
3. In the blank box, type in "Regedit" and click OK
4. When a window opens, you will see a tab that says "HKEY_LOCAL_MACHINE", expand that tab
5. Once you expand that tab, you will see another tab that says "Software", expand that tab
6. Once you expand that tab, you will see another tab that says "Microsoft", expand that tab
7. Once you expand that tab, you will see another tab that says "Windows NT", expand that tab.
8. Once you expand that tab, you will see another tab that says "CurrentVersion", expand that tab.
9. Once you expand that tab, you will see another tab that says "WPAEvents", double click on that tab.
10. Once you double click on "WPAEvents", you will see a file that is named "OOBETimer".
11. Double click on "OOBETimer" and a new window should open, when that window opens, delete all the characters you see (It will be a very strange code consisting of number, letters and strange symbols). Make sure that you HIGHLIGHT all the characters, and then delete them. When you have finished deleting the charcters, the only ones remaining should be "0000".
12. Once you have done that, click OK and close everything.
13. Now again, go on "Start" and click on "Run".
14. This time, type this in "%systemroot%\system32\oobe\msoobe.exe /a".
15. A new window with the title "Let's activate Windows" should open.
16. You should see three options when that window opens, select the one that says "Yes, I want to telephone a customer service representative to activate Windows", and click "Next".

17. Once you do that, it will be say "Generating New Installation ID", and then another page should open up.

18. On the bottom of the new page that opens, you should see a button that says "Change Prodcut Key", click on that.

19. Now it will take you to a new page, and you will see 5 blank boxes, fill those boxes up with this key "THMPV-77D6F-94376-8HGKG-VRDRQ".

20, Make sure you have copied the key CORRECTLY, once you have done this, click on "Update".

21. Once you have done this, it should say "Generating New Installation ID" and take you back to the previous page.

22. This time just click on "Remind Me Later".

23. Now restart your computer, and you're done, your copy of Windows XP should now be genuine.

Matthew 6:33 - February 28, 2011, 5:53 am

testing this out thanks for the tut

Do0ks - February 28, 2011, 6:39 am

Nice mate, I have to try this sometime. Booked marked for later use.

PhineasPhreak - February 28, 2011, 8:24 am

Bookmarked for future use.

Looks like it could work, but I do not understand what you are doing when you fiddle with the registry.

Why is that necessary?

shanker - February 28, 2011, 8:27 am

It does work, Nice copy and paste you got there OP. I'm glad someone finally posted it as I couldn't find the original source before :)

immortal19 - February 28, 2011, 8:29 am

Wowwww !! let me Try thisss Soonnn ;)

Zhen. - February 28, 2011, 8:41 am

Thanks for sharing this tutorial. I will try it out now.

Peace ?

Nestle* - February 28, 2011, 11:19 am

Looks like it could work, but I do not understand what you are doing when you fiddle with the registry.

Why is that necessary?

Yes it is necessary It will remove the old window key. Without making change in registry settings when you type this "%systemroot%\system32\oobe\msoobe.exe /a" you will see that your window is activated but when you Validate with microsoft it will detect if window is not genuine. So you have to do the same way as instructed. Cheers

bluemountain399 - March 11, 2011, 8:01 am

works Greats thnx.. I tried it before and still it works like charm...

iSmile - March 12, 2011, 8:55 am

Tested and working!

Big vouch!

Meetoo - March 12, 2011, 8:57 am

Haha Nice !! Thanks for this man.

girmal5 - March 12, 2011, 9:00 am

thanks for the tut man ill check it out

Nestle* - March 14, 2011, 9:15 am

yes its working great... Say thanks of you like.... :)

4saken - March 14, 2011, 9:20 am

thanks, bookmark it for later ;)

sumit8510 - March 14, 2011, 12:27 pm

Tested it 2 years ago.

And I wanna tell you that it will work definitely.

But after some days, it won't work. You will get message for activating your windows.
And I am totally sure about it cause I have tested it four times.

Thanks

SIM-639501 - March 14, 2011, 1:07 pm

Thanks for sharing this tut! will test it out.

Nestle* - March 15, 2011, 3:33 am

I am using it for a long time but never get the Message.. It is still working more than six month i am using Windows and Updating it but never got Windows Activating message...

c00ldodo - March 15, 2011, 7:02 am

nice, seems to work but just asing :P why are u even still using xp :S ???

malle00 - March 15, 2011, 7:35 am

It work very well thx mate, its really nice :D

earthquake - March 15, 2011, 7:48 am

its working for me thnks mate

XP addicted ?...?

Ahnaf Tajoar - March 16, 2011, 2:48 am

U r great man!!and the boss

mitesh2889 - March 16, 2011, 5:41 am

hey man... It's working for me... thanks a lot... You did a great job....

Nagath - March 16, 2011, 6:12 am

Working for me too
Thanks :)

Alex1239 - March 16, 2011, 6:14 am

Great working trick... :)

h4yR0 - March 16, 2011, 6:52 am

It not work for windows 7 :(

Nestle* - March 17, 2011, 1:38 am

(Mar 16, 2011 06:52 AM)h4yR0 Wrote: [\[CITE\]](#) It not work for windows 7 :(
Its only for Xp as its title says.. Not tested on WIN 7.. :)

stupefyyy - March 25, 2011, 7:10 am

dude thats some crazy ass tutorial there...very nice work...you should get a tutorial award for this.

iSmile - April 7, 2011, 12:28 pm

:)
If you can make something like this for WIN 7 you'll be great!
I have tested this on several XP computers, and always worked!

Keep up the good-work!

Nestle* - April 10, 2011, 10:47 am

Yes i'll try.. to deal with Win 7 :)

Nestle* - July 11, 2011, 11:07 am

Keep this Alive mates.. :) ..

stdape2011 - July 11, 2011, 11:29 am

well i was going to try it but bought a genuine copy for UK 50p yesterday , at a local Fete. Amazing what u can find at a local sale on a junk store lol

opx1230 - July 11, 2011, 11:52 am

works fine for me thanx man

lol what can you expect now.. from Xp

freekiss - July 14, 2011, 12:36 pm

merci bcp pour toutes ces informations,
it's very practice. i tried il an it's work,
thx very much

Snickers??A?K?R - July 14, 2011, 12:38 pm

thanks bro very helpful I will be using this? :-)

freekiss - July 14, 2011, 12:38 pm

thx for this informations,
i tried this and it's work,
thank you so much

xDMan - July 18, 2011, 6:44 pm

hey man I want to ask you : when I do the updates it appears a black screen and says : windows is not genuine. Will that screen appear when I do the steps you posted here ? Thank you and sorry for my bad english !! :)

Burn™ - July 18, 2011, 7:50 pm

nice mate thank you :) :D xD

Nestle* - July 19, 2011, 3:46 am
