Thread: [How to Enable Right Click in Websites](#)

The Invoker - February 28, 2011, 12:03 pm

You are probably sometimes tried to save

images or copy the contents of the website that forbid their use of the right-click. Most websites use javascript to prohibit the use of the right-click , so to enable it you should disable the javascript.

There are many ways to do ti , the simplest by my opinion is using Web Developer 1.1.9 , firefox add-on .

1) Downlaod Web Developer 1.1.9[Download it from this link](#)

2) Click Disable button

3) Select Disable Javascript

4) Again select "All Javascript" option.

or you can easily bypass this, With firefox: goto the top hit "view" then "View Source" lol.
Chrome: type "View-Source:WEBSITEHRE"

Lol :D

Great tut man, thanks for sharing.

White Hat - February 28, 2011, 9:33 pm

Tbh, I needed this so long ago for a game I used to play cause you couldn't right click it. Now I can and now I can hack the game :D.
