Thread: Best video player for TrueHD Atmos 7.1 audio?

woobadoobadoo - *June 22, 2017, 2:08 pm*
So apparently VLC isn't capable of playing TrueHD Atmos 7.1 audio so I am looking for the best alternative, anybody got any recommendations?

webdev77 - *June 22, 2017, 4:14 pm*
The new version actually does support TrueHD>3. You probably need an update.

Don't think it does.

I know that it does and their website says it does. What version do you have? Are you sure the video you have is actually what codec you think it is?

Link me where abouts on their website it says it does? I am absolutely sure what audio type it is, considering VLC literally tells me. Also when I google, all I see is forum posts of VLC not supporting it and I looked into the VLC change log and can't find anything about supporting TrueHD Atmos audio.

http://www.videolan.org/vlc/features.html

Says TrueHD >3 right on the page

Those forum posts are old.
