ENJOY ?

NOTE: If you don't trust me run it sandboxed!

NOTE2: If you're on windows vista/7 you need to run the application as administrator otherwise it's going to show a license error "just the first time"

If it give u any problem while running please download and register all the ocx files in this folder

Note: you don't need all but i forgot what's the one needed xD

To anyone still thinking about getting iStealer 6.3:
Don't.

There is a much better, much newer logger (works with Opera AND Firefox 4) called aStealer, it can send you the logs via eMail, FTP or using a PHP file (exactly like iStealer does, except aStealer doesn't have a nice panel like this :<) go search for it. <https://hackforums.net/search.php>

xisle35 - August 23, 2011, 12:04 am

Having real trouble with this. "can't open lognum.txt" is what happens when i go to index.php, and when i test my url i get "logger not found: check the url!" any ideas?

edit.

i found changing the '0' in 'lognum.txt' to a '1' solves the above problem, however, i get a chapter in

Quote: Notice: Undefined variable: _SESSION in xx/index.php on line 46

Notice: Undefined variable: _SESSION in xxindex.php on line 46

Warning: session_start() [function.session-start]: Cannot send session cache limiter - headers already sent (output started at /xx/index.php:46) in /xx/index.php on line 378

it's like a full path disclosure buffet!

mamorier - August 23, 2011, 1:25 am

I've tried Istealer for 1 week now. It's one good simple program to steal.

It means your iStealer can't reach your website. You need to check the connection, or re-upload the iStealer.

xisle35 - August 23, 2011, 1:41 am

hey thanks!, i'm still having trouble here; i've uploaded this thing well, a lot of times lol. many diff. versions, i can't get a 'test url' in server builder to successfully connect, and like i said in my edit, i can't get passed the "can't read lognum.txt" with out changing it to a 1. one of the many versions i've dl (i'm sure this vmware is infected like crazy ha) had a lognum with a 0 and 9 or ten spaces afterwards and that seemed to work also, but i can't escape the birage of full path disclosure, and "Undefined variable" and "undefined index" errors that flood the top of the page above the login form.
