Thread: Ways to take advantage of devices on a wifi network?

GoogleDocs - *August 10, 2017, 5:14 pm*

Hello, can any of you please point me in a direction where I can learn more about ways I can take advantage of devices on a wifi network.

I am currently living in a community where there are about 1,000 people on the extended wifi network (its the same wifi with extenders throughout the area).
Essentially, I am wondering what I can do to the devices, how I can, etc.
Also, I'd like to note that I am on a Mac laptop :(

This is my first post! Thank you to the community!

i have in the past been at a college and was trying to watch a movie but the campus wide net was so slow. so i thought for a bit and realized i could run aireplay and just boot off the router and idk how many folks i booted off but then i watched videos the rest of the night with out harm.

You'll need a Linux computer is some way shape or form. You can dual boot Kali Linux. Start with mitm attacks. An mitm attack, in a nutshell is when the attacker pretends he is the router and therefor packets are sent to him. Try this and sniffing images.
